## ABSTRACT

### Palace Architecture and Its Rhetoric in Seljuk Anatolia:

#### The Conceptualization of Kubadabad

The palace complex of Kubadabad near Beyşehir - regarding its good state of preservation - provides an ideal object for the study of palace architecture and the (courtly) rhetoric under the reign of the Rum-Seljuk Sultan ‘Ala’ al-Din Kaykubad I (r.1219-1237).

This thesis offers a new perspective to the existing studies by identifying common rhetorical methods, and tools that were used by the Sultan and Seljuk courtiers to articulate courtly/ royal messages on power and kingship. It argues that - in facing the process of renewal - nature has become a key element of the courtly/ imperial of rhetoric in the thirteenth century Seljuk Anatolia as far as the palace architecture –i.e. the choice of architectural form, composition, and materials – and court literature – i.e. historical narratives/ dynastic histories and advice literature – took nature as a major model of thought and organization along with religion and legends. The assumed influence of nature on architectural and literary rhetoric of palaces will be examined based on two different sources on the extraordinary example of Kubadabad: The first part of the study investigates the archaeological data gathered from forty years of excavation at Kubadabad. The second part discusses the work *Al-Awamir al-Alaiyya fi ‘l-umr’ al-Alaiyya* written by the contemporary Seljuk courtier Ibn Bibi regarding architectural references and rhetorical elements.

## ÖZET

Selçuklu Anadolu'sunda Saray Mimarisi ve Retoriği:

Kubadabad'ın Kavramsallaştırılması

Beyşehir yakınlarındaki Kubadabad saray külliyesi, iyi korunma durumu sayesinde, Anadolu Selçuklu Sultanı Alâeddin Keykubad I (r.1219-1237) dönemi saray mimarisi için ideal bir örnek teşkil etmektedir.

Aşağıdaki tez sarayın iktidar ve hükümdarlığa ilişkin mesajlarını ifade etmek için kullandığı retorik yöntemleri ve araçları tanımlayarak mevcut çalışmalara yeni bir bakış açısı sunmaktadır. Tezde bu olağanüstü örnek iki farklı kaynağa dayanarak tartışılmaktadır: Tezin birinci bölümü Kubadabad'da kırk yıl boyunca yapılan kazı çalışmalarından elde edilen arkeolojik verileri incelemektedir. İkinci bölüm ise İbn Bibi tarafından yazılmış *el-Evâmirü'l-Alâiyye fi'l-umûri'l-Alâiyye* adlı eserde verilen mimari referansları ve kullanılan retorik öğeleri araştırmaktadır. Bu tartışmalar ışığında, çevre ve/veya doğanın gerek saray mimarisinde gerekse saray edebiyatında görüldüğü üzere on üçüncü yüzyıl Selçuklu Anadolu'sunda kullanılan ana düşünce modellerinden biri olduğu öne sürülmektedir.

## CHAPTER 1

### KUBADABAD AS A PHYSICAL AND MENTAL ENTITY

The historical value of palaces - amongst other royal patronages – lies in the multiplicity of their functions that go beyond the basic architectural function of providing shelter for the dynasty and members of ruling classes. Palaces serve as seats of government that contain spaces for administrative, political, and ceremonial functions. Finally, palaces take on representative and rhetorical tasks, in displaying the wealth and power of their patron through their architectural and decorative qualities. In this sense, it might be very helpful in understanding the historical context of this period.

Irene Winter has emphasized the importance and role of the palace architecture in the ancient Near East rhetorical function of the palace was “as essential as its residential, administrative, productive, and ceremonial functions” as far as it was constructed

“as a mirror of the king. It is a physical manifestation of the ruler's power and ability to build; and at the same time, by having built so impressively, the ruler has further demonstrated his power and ability to command resources, induce astonishment, and create a fitting seat of government-in short, to rule.”<sup>1</sup>

Following this idea, the Seljuk Sultan Ala al-Din Kaykubad I (r. 616–35 H / 1219–37 CE) seem to have named his palatial patronages such as Keykubadiye outside of Kayseri, Kubadabad near Beyşehir, or the castle in Ala'iyya giving its name to the today's city Alanya. The similarities in the names, environments, plans and the decoration of these palaces reflect the progress of centralization within the growing

---

<sup>1</sup> Winter, "Seat of kingship / A wonder to behold: The palace as construct in the ancient Near East," *Ars Orientalis* 23, no. Pre-Modern Islamic Palaces (1993): 38.

and strengthening Sultanate. The growth of the realm in Anatolia and military successes of the Seljuks was further accompanied by the expansion of the trade routes and ports that would revive the trade and improve the finances. These novelties in the structure of the state changed the administrative system; while the ruler started to move between the different parts of his realm, his throne and palace followed him. The gathering of power in the hand of the sultan was linked to the process of centralization, which required a common standardized (visual) language that would raise the recognition of Seljuk sovereignty in the newly established palaces and royal projects throughout the Seljuk realm and create an adequate royal rhetoric defining the image of the sultan and courtly ceremonies. However, the process of renewal during the reign of Ala al-Din Kaykubad I manifested itself not only in the architectural projects built but also in the cultural production of the Seljuk court.

This thesis attempts to define common rhetoric elements and topics in royal architecture and court literature of Seljuks in the thirteenth century Anatolia. It further argues that nature (or environment) was a key element of the courtly/royal rhetoric as far as the palace architecture –i.e. the choice of architectural form, composition, and materials – and court literature – i.e. historical narratives and advice literature. The Seljuks took nature as a major model of thought and organization along with religion and legends.

In this regard, the object of the following thesis will be narrowed down to the discussion of palace architecture and courtly narratives on palatial structures. The above-mentioned palace of Kubadabad will hereby serve as an example of the palaces built during the Seljuk golden age in Anatolia. The Palace Complex of Kubadabad on the southwestern shore of the Lake Beyşehir plays a significant role in

the Seljuk studies since its rediscovery in the 1950s. The palace once built and used as a hunting and summer estate stands out with its in-situ decoration, offering a great range of figurative tiles. Therefore, Kubadabad has been a major source and topic for the Seljuk studies in Anatolia, particularly in the light of the excavation works that continue since the 1980s.

### 1.1 Period and patron

‘Ala’ al-Din Kaykubad I's reign (r. 1219-1237) marks in the history of Rum Seljuk Sultanate a special episode; today ‘Ala’ al-Din's and his brother Izz’ al-Din's rule in the first half of the thirteenth century are recognized as the golden age of the Seljuk dominance in Anatolia which took its start already in the eleventh century.

The decisive victory at the Battle of Manzikert in 1071 gained by the Great Seljuk Sultan Alp Arslan (1063-1072) against the Byzantine army has led to an influx from the East giving way to Turkification and Islamization of Anatolia. In the following periods, Turks and Turkmen tribes showed continuously growing presence in Anatolia. Among many other Turkmen principalities in Anatolia, the Rum Seljuks rose to power. Despite the Great Seljuk bloodline of the Rum Seljuk dynasty, sultans acquired authority and legitimacy by eliminating their rivals, and by building diplomatic contacts and familial alliances. These early years of the Sultanate characterized by tribal organization, and continuous warfare ended rulers dedicated themselves to strengthen and improving Rum-Seljuk in Anatolia.

The victory of Izz’ al-Din Qilich Arslan II (r. 1155-92), the grandson of the first Rum Seljuk Sultan and bearer of his name, at the Battle of Myriokephalon (1176) against Byzantine army is considered another milestone in the Seljuk history.

The weakening and elimination of rivals and achievement of some stability allowed a change of focus from warfare to the organization of the Sultanate. This shift marked the end of the early period and the beginning of a new era with 'imperial' ambitions.

In the following years, the Seljuks managed to grow the boundaries of the Anatolian Seljuk realm towards the seaports in the north and south, taking control the sea trade in addition to trade routes they held on land. This expansion was accompanied by a revival or renewal of existing structures in Seljuk Anatolia. This included the improvement of route networks, (re-) building of facilities for stopovers such as caravanserais, the revival of larger trade hubs or cities through the foundation of charitable facilities, and trade treaties with other lands. The sultan - but also dynasty members and elites - further supported to the improvement of public wealth by investing into the building of mosques, masjids, madrasas, hospitals, fountains, baths, and water supply systems.

The expansion and consolidation of power in Anatolia continued and even intensified at least until their defeat by the Mongols at the Battle of Köseadağ in 1243. (Figure 1) The first half of the thirteenth century, the reigns of Izz' al-Din Kayka'us I (r. 1211- 1219/20) and particularly 'Ala' al- Din Kaykubad I (r. 1219/20-1236/37), the grandsons of Qilich Arslan II, is therefore considered as the culminating point, or the zenith of the Rum Seljuk Sultanate. Their successful reforms considering politics and finances had influences in all parts of life, above all in society and courtly life. The increased number of artifacts and architectural projects commissioned by the dynasty and court members during this period provide evidence for these new reforms, royal rhetoric, as well as for the wealth that came along with the stabilization of the authority.

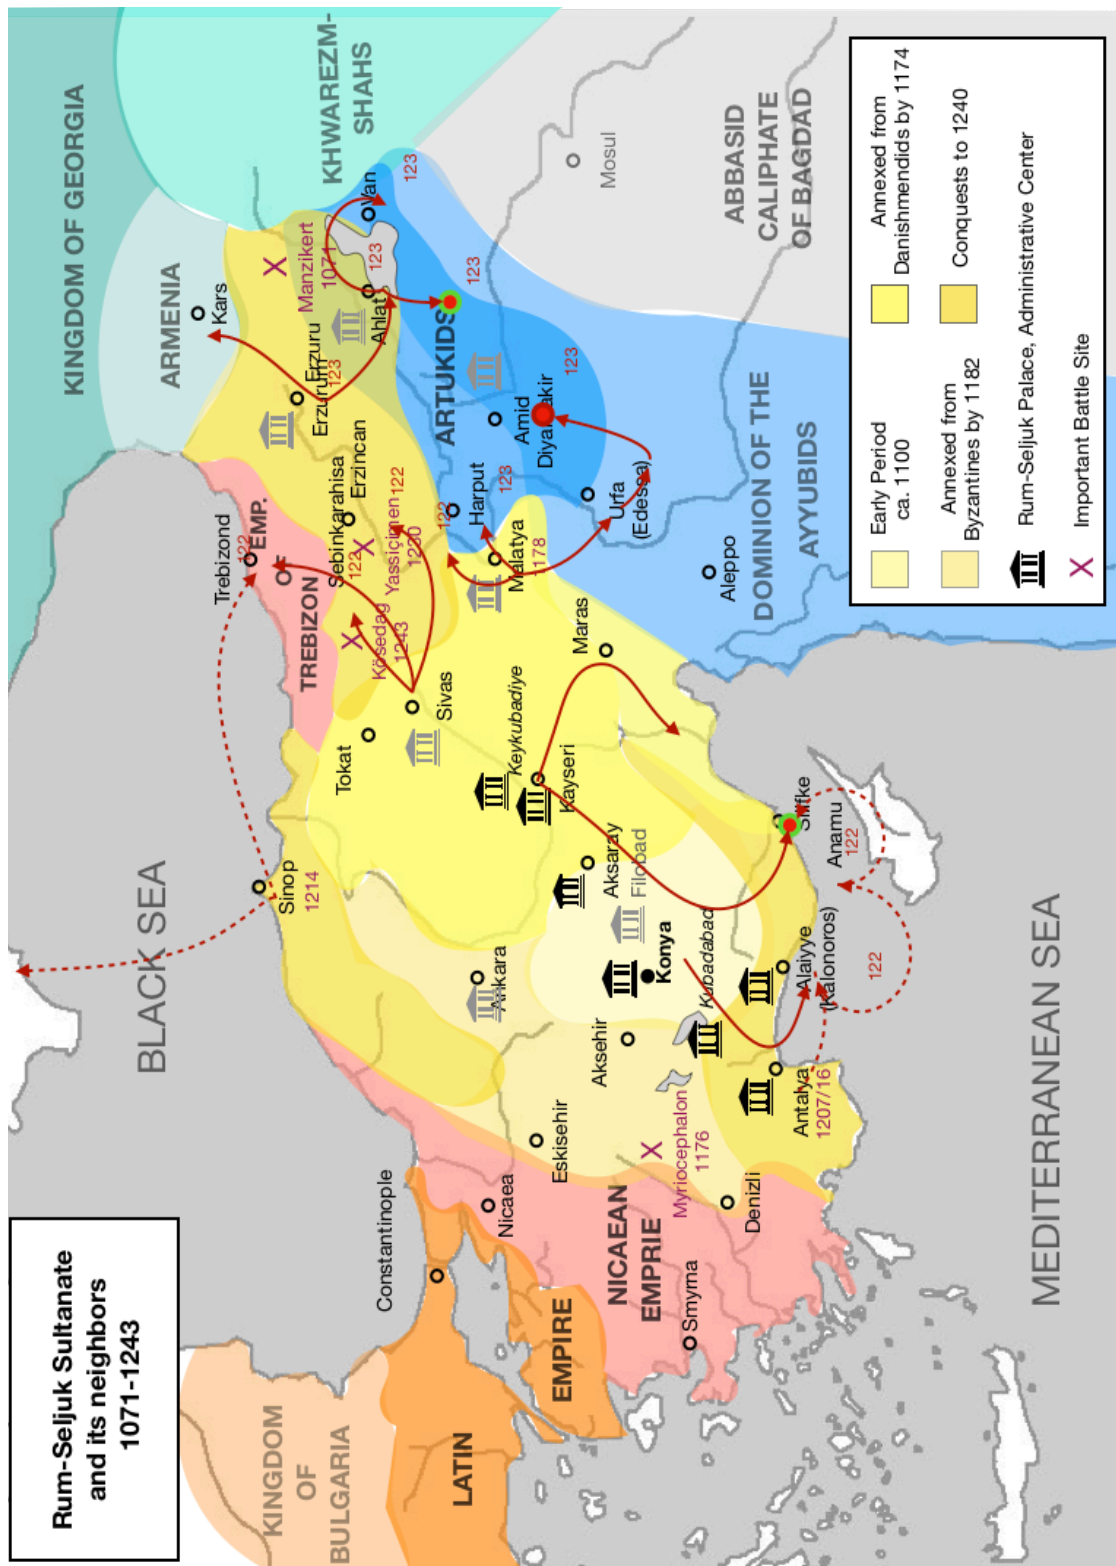

Figure 1. Map of the Seljuk Sultanate in Anatolia between 1071-1243 made by the author

A special role in this process of renewal - i.e. centralization of the Sultanate and creation of a new royal image or identity - was 'Ala' al-Din Kaykubad I. He is today

recognized as 'the greatest' Seljuk Sultan of Anatolia, not only because he was the last independent ruler of the dynasty before having become a Mongol protectorate. Kaykubad I was particularly known as one of the most active sultans of this dynasty, whose legacy survived in the great number of architectural projects patronized by him that are spread through Anatolia. In Kaykubad I's architectural patronage, we might see a certain tendency of representation and glorification of the sultan that could easily be linked to the attempt of legitimization of his kingship, and thus, building up the identity of his state.

In regarding this, we might see foundations of a new orientation or hints for a new role model beginning from the reign of Qilich Arslan II. The names of his successors, Kayhusraw, Kayka'us, and finally Kaykubad have its origins in the Persian legends as represented in the *Book of Kings (Shahnama)*. These names, as the stories of the *Shahnama*, are products of the attempt to merge two different cultures; the pre-Islamic Persian and the Islamic cultures. The Persian poet Ferdowsi, who completed the original work for the Turkish ruler of Ghazna, provided a world history based on Persian legends and heroes who were integrated to the history as ancestors of the contemporary eleventh-century Islamic rulers of Iran. The Seljuks of Anatolia might have seen role models in the deeds of former Turkish-Muslim rulers, amongst other the sultans of the Great Seljuks. According to Peacock, the names, as well as, the use and appreciation of Persian language and literature demonstrated the growing importance of Iranian culture beginning from the late 12th Century. The interest in the Persian past is visible in various examples from Kaykubad's reign. The quotations from the *Shahnama* and Quran on the walls of Konya, examples of Persianate literature read at the Seljuk court are further indicators for orientation in

both Persian and Islamic cultures. The commitment to the Abbasid Caliphate was part of this new Seljuk approach under both Izz' al-Din and 'Ala' al-Din.

After the death of Izz' al-Din, his younger brother 'Ala' al-Din Kaykubad I (r.1220-1237) has ascended the throne and become the new sultan. One of the first authorities to accept his legitimacy and to cooperate with was the caliph al-Nasr al-Din Allah, who sent him the scholar Shihab al-Din Omar b. Abd Allah al-Suhrawardi with gifts. Protection was not only granted from the religious entities, but Kaykubad made further arrangements with surrounding rulers to ensure his position facing both internal and external threats. The Mongol armies approaching from the Eastern lands required further attention and caution to foreign issues, as well as cooperation between lands. In the first years of his reign, the Caliph in fearing Mongol attacks to Bagdad asked Rum-Seljuk ruler for military support of 5000 soldiers, whom Kaykubad sent to Mosul under the command of Baha al-Din Kutlugça.

Despite such false alerts, the news of the Mongol attacks increased. The reign of 'Ala' al-Din Kaykubad I was characterized by concerns of the approaching Mongol invasion from the East. The Mongol threat was more than a foreign issue, but it affected also the domestic politics and required different strategies in every aspect of governance.

On the one side, Anatolia went through a continuous influx from Central Asia that was intensified with the Mongol invasion. People from the Persianate world fled to Anatolia, the furthest western frontier of the Islamic world seeking for a peaceful life without Mongol treat. The immigrants were this time not only the Turkic nomadic tribes but also skillful artisans, religious scholars and well-educated members of Persian aristocracy and courtiers. They brought important skills and knowledge for the establishment of a higher culture at the court. Artists and

craftsmen worked in different (architectural) projects spread through Anatolia, some members of Persian elite, such as the family of Ibn Bibi, the author of the main historical source about Kaykubad's reign, found employment at the Seljuk court, and scholars established their own Sufi schools and lodges in main cities.<sup>2</sup> Their presence in Anatolia, at the same time, must have been caused a cultural shift towards Persianate worldview, which probably promoted the tendencies of the Rum Seljuk dynasty in seeking a new rhetoric. The arrival of large populations must have affected the existing settlement structures, forcing cities to grow beyond borders and increasing the need for new infrastructures and public facilities. Similarly, the integration of immigrants to Anatolia and increasing requirements for natural resources and their supply must have been some of the greatest concerns of the Sultan. The building projects of 'Ala' al-Din, which was mentioned earlier in text, can be seen amongst others as measures in this regard.

On the other side, 'Ala' al-Din started to build walls and towers around many cities, including the capital city of Konya, Sivas, as well as Kayseri, and to repair or maintain the existing ones. This sanction ensured the security of the cities from foreign powers. At the same time, the construction, and financing of these huge building projects kept amirs, who stood hesitating over the rise of Kaykubad to power and distrusted him, busy for some time.

The distraction of amirs allowed the new Rum-Seljuk Sultan to eliminate further problems and to show his military skills by initiating further military campaigns with powers both on land and on the sea. The most important event for 'Ala' al-Din's legitimacy was the conquest of the city, or castle of Kalonoros in 1221, which he converted into Ala'iyya after his own name. Next campaigns were

---

<sup>2</sup> Wolper, *Cities and saints: Sufism and the transformation of urban space in medieval Anatolia* (2003).

directed to both northern and southern lands since trade routes have become insecure for merchants after the death of the Armenian king Leon II in 1219 and some years later Mongol attacks to Kipchak and Crimea. One of the main targets was the trade city of Sudak, which has been left without control after the Mongols. In doing so, he would re-establish the security of trade routes. Immediately after these occasions, Kaykubad was obliged to turn his attention to the problems in the Eastern and Northeastern lands; 'Ala' al-Din gave great importance to keeping his vassal states such as Artuqids of Diyarbakir or Empire of Trebizond, which used every occasion to rebel against the Seljuks by accepting rival Ayyubids', or Harezmshahs' lordship. Turan argued that this attitude was part of Kaykubad's anti-Mongol policy, according to which these states would act as a buffer against any attacks from the Mongolian side.

Thus, following this idea, Kaykubad's decisions all appear to be influenced mainly by the approaching threat of Mongols. The strengthening of foreign relations with neighbor principalities and kingdoms allowed the creation of buffer zones consisting of vassal and ally states. Annexation to the Abbasid Caliphate to guarantee the support of Islamic states, too, was part of Sultan's strategy as much as his deeds in terms of the domestic affairs. While building projects helped to create a consistent settlement and road networks, greater projects such as building walls and military facilities provided more security for the Seljuk subjects in Anatolia, and kept -in addition to his frequent visits - Seljuk governors and amirs on a tight rein.

In the light of these assumptions, it seems that the construction of new suburban/ rural palaces might have been also part of Kaykubad's strategy; archeological evidence of many kiosks, gardens, and lastly (garden-) palaces from this period indicate a certain shift of the royal interest and power away from the

existing centers or cities to rural or suburban areas.<sup>3</sup> The location and names of the palace complexes such as Kubadabad near Beyşehir, or Keykubadiye near Kayseri suggest further that the sultan had a special agenda in patronizing these projects. Especially Kubadabad stands out from this group of royal projects as the only (-known) palace to be built in the rural area, remote from the main Seljuk cities.

## 1.2 Discovery and excavations

It was the Zeki Oral, the former director of Museum of Konya, who has first claimed to have located the ruins of the former Seljuk palace complex of Kubadabad in a short report in the journal *Anıt* in 1949.<sup>4</sup> In his later article, “Kubad-Abad nasıl bulundu?”, Oral he described his trace in different historical sources from the Seljuk and Ottoman periods to locate lost palaces of the Seljuks.<sup>5</sup> He further reported his visits to sites and villages in the area of Yenişar that consisted of five small villages (Hoyran, Kuruca Ova, Muma, Kürtler, Bademli, and Yenice).

Among his primary findings were numerous ruins as well as spolia that were reused in walls, doors of local houses, particularly in the village Gölyaka (Hoyran), and an inscription on the mosque of Kürtler that was probably once decorated the original masjid of Kubadabad. The inscription which bore the information about its patron, the construction date and dedication of the building to the contemporary ruler ‘Ala’ al-Din Kaykubad I. The fact that the patron was titled as the governor of Kubadabad gave the final evidence that this was the right spot. In addition to these,

---

<sup>3</sup> Redford, Beach and Luzzadder-Beach, *Landscape and the state in medieval Anatolia: Seljuk Gardens and pavilions of Alanya, Turkey*, vol. 893. (Oxford: Archaeopress, 2000).

<sup>4</sup> Oral, "Kubadabad bulundu," *Anıt* I, no. 10 (1949).

<sup>5</sup> Oral, "Kubad-Abad nasıl bulundu?," *Ankara Üniversitesi İlahiyat Fakültesi Dergisi* II, no. 2-3 (1953).

Oral has suggested that the site called Tol, with ruins of various structures, as well as, a prehistoric tumulus at a land peak on the lakeshore has been the site of the original palace. At this site, he spotted around twenty structures/ ruins, which once formed the palatial complex of Kubadabad.

The first excavation campaigns in Kubadabad began in 1965 thanks to the German financial supports that covered nearly all the costs. The direction of the works was given to Katharina Otto-Dorn (1908-1999)<sup>6</sup>, and her Turkish colleague Mehmet Önder. In the same year, they published together first introductory reports that provided an overview of the results of the work made by Oral.<sup>7</sup> A later report about the results of the campaigns 1965-66 was published in cooperation with her interdisciplinary team.<sup>8</sup> Otto-Dorn described in the main part of this report, the layout of the two main buildings, which are since then denoted as Great and Small Palaces. Artifacts that were found during these campaigns were discussed separately according to their location, themes, and materials (glass, ceramic, coins, stucco) with an emphasis on tile decoration. Short discussions about these groups of artifacts were written, alongside Otto-Dorn, by Fügen Tunçdag, Gönül Öney, and Janine Sourdel-Thomine. The report was further accompanied by the first ground plans of these two

---

<sup>6</sup> Katharina Otto-Dorn was a German art historian, who came to Turkey in the 1960s. She established the Chair for Islamic art at the University of Ankara, where she introduced a new understanding with origins in the formalist teachings of Josef Strzygowski (1862-1941). The excavations in Kubadabad were an example of her approach that united the disciplines of archaeology and art history. Amongst her books on Turkish ceramics, Islamic art, and papers on diverse Islamic and Seljuk motifs and symbols, the most valuable source for this thesis are her reports about the afore-mentioned excavations. Otto-Dorn, *Türkische Keramik* (S.I.: s.n.], 1957). Otto-Dorn, *Das islamische Herrscherbild im frühen Mittelalter* (8.-11. Jahrhundert) (Stuttgart). <sup>7</sup> Otto-Dorn and Önder, "Bericht über die Grabung in Kobadabad (Oktober 1965)," *Archäologischer Anzeiger* 81, no. 2 (1966). Otto-Dorn and Önder, "Kubad-Abad kazıları 1965 yılı ön raporu," *Türk Etnografya Dergisi* 14 (1965).

<sup>8</sup> Otto-Dorn, *Bericht über die Grabung in Kobadabad 1966* (Berlin: Walter de Gruyter, 1969).

buildings, as well as the site and topographic maps that were drawn by architect Curtis Campaigne.

Despite the shortness of the working period, these documents, the drawings have built the basis for the later studies and works around Kubadabad. These promising works had an abrupt end after Otto-Dorn received a call from an American university and left for California.

In 1980, the second period of excavation works started after thirteen years of pause. The new director Rüçhan Arık has been familiar to the project. She was involved in the first excavation campaigns as a doctoral student of Otto-Dorn. Kubadabad has become her life work; Rüçhan Arık remained the director of the annual excavations over thirty-five years, from 1980 to 2017. During this period, she accomplished that the site and ruins of the Kubadabad Palace became acknowledged and respected by official and cultural institutions. Because of her attempts the palace was granted the status of a “National Palace” and became supported by the Turkish Republic in 2010. According to her accounts, Arık saw Kubadabad as a model for developing medieval archeology. Her aim by starting the excavation works was to create a national open-air museum or park.<sup>9</sup>

The complex placed on a small cape/ point reaching into the marshlands at the lakeshores southwest of the Lake Beyşehir has become the main excavation. However, articles written by Oral and Otto-Dorn had remarked the existence of further sites in the surrounding area, for instance in the nearby villages of Gölyaka and Pınarbaşı, or on the island of Kız Kalesi. Accordingly, the area of excavation was enlarged over time, so that Arık and her team started to document some of the

---

<sup>9</sup> Arık, Kubad Abad: Selçuklu saray ve çinileri (Türkiye İş Bankası, 2000), 47.

surrounding structures and to preserve them by clearing the ruins from plants and rubbish in short excurses.

During the period between 1981 and 1985, Arik and her team focused on the ruins of a castle built on the nearby Island of Kız Kalesi (Maiden Castle). The Maiden Castle was built on the remains of a former, probably Byzantine, castle or monastery. The buildings are distributed over an area of 3000 square meters, which include besides the castle, a bathhouse (*hammam*), and a group of smaller rooms that were used for storage or as dormitories.

From 1985 onwards, the campaigns were made on the main palatial site that covers the largest area of around 5200 square meters. Over the years, the excavation team has found remains of around twenty different structures within this main part of the complex. Of all these structures, two became particularly central to the excavations and studies; the Great and Small Palaces were the only ones that were identified as palatial edifices as their names indicate. In the last years from 2003 onwards, further buildings of the on the western part of the complex have been surveyed. Totally, Arik's team has been able to finish the survey of more than five buildings at the main site. Nevertheless, there are still buildings and parts of the complex remaining untouched.

### 1.3 Literature review

In terms of Kubadabad studies, Arik's writings are the leading works of the field. Arik's annual excavation reports for the excavation results conference held by the Turkish Ministry of Culture were the main source of information since 1980. These reports constitute the main body available to public access written on the works in

and around the palatial complex (referred to as ‘Kubad-Abad Selçuklu Saray Külliyesi’ or ‘Sitesi’).<sup>10</sup> However, Arık has published three books that offered readers information about the state of the ongoing excavation works and results.

*Kubadabad: Selçuklu saray ve çinileri* (2001)<sup>11</sup> was the first comprehensive work about Kubadabad after the 1969 published report of Otto-Dorn and her team. The book offered - in contrast to the reports - an overview to similar, comparable Seljuk monuments in Anatolia; here, Arık presents Qilich Arslan or Alaeddin Kiosk<sup>12</sup>, and the palatial complex of Keykubadiye<sup>13</sup> in Kayseri. It further addressed the history of Kubadabad complex including quotations from Ibn Bibi’s narrative about the legendary foundation of the site. In the second part of the book, Arık moves away from the description of the site and buildings to the analysis of artifacts that had been found in this area, some of them even in situ on walls. Her arguments basically concern the Turkish and Persianate influence of the architectural and decorative style.

---

<sup>10</sup> The information is given following the same scheme: The introduction provides insights into the official status, aims, and the duration of the works, as well as the patrons and supporters of the campaigns. Each of these articles further document excavation fields during each campaign. These areas are often denoted with codes of areal divisions and attributed to important artifacts found in them. The descriptions often are accompanied with photographs of the most important discoveries, and limited number of illustrations showing their forms and locations on the site.

<sup>11</sup> Arık.

<sup>12</sup> Qilich Arslan Kiosk is suggested to be a part of the main Seljuk Palace in the former capital Konya, which probably was built by Qilich Arslan II and restored by his grandson ‘Ala’ al-Din Kaykubad I. Due to its central location, this structure has been described and recorded by visitors of the city in every period. The first academic surveys began Albert Gabriel, Max von Berchem, Friedrich Sarre, etc. Sarre and Uzluk, Konya köşkü (1967).

<sup>13</sup> Keykubadiye complex, in contrast to Konya and Beyşehir examples, has been less in focus; it has been examined by Kurt Erdmann, Oktay Aslanapa etc. Erdmann, "Zum Verbogenbau von Keykubadiye," (1957). Aslanapa, "Kayseri’de Keykubadiye köşkleri kazısı," Türk Arkeoloji Dergisi 13, no. 1 (1964). According to the sources, the palatial complex of Keykubadiye was built by the same patron ‘Ala’ al-Din Kaykubad I some years before Kubadabad. Unfortunately, the Mongols have destroyed Keykubadiye after its patron, Kaykubad I, was murdered in 1237 at the same spot. There have been excavation campaigns at the site in the 1960s without continuity. The excavations started anew in 2014, after the site has been nominated as a public park. Since 2016 the excavations have been conducted by Ali Baş, and his assistant Şükrü Dursun. Baş and Dursun, "Keykubadiye sarayı 2014 sondaj çalışmaları," (2015), Baş, "Keykubadiye sarayı kazısı 2015," Kazı Sonuçları Toplantısı 2, no. 38 (2016).

However, Arık's book in comparison to the 1966 excavation report of Otto-Dorn appears to be less detailed and academic. Beside the anecdotal style of the text,<sup>14</sup> long architectural descriptions details without adequate plans cause confusion in understanding the positions of objects and render it rather difficult to follow the arguments of Arık.

Particularly, her attitude towards the use of visual aids seems problematic; Arık uses only a limited number of maps and plans in small sizes that had been published by Otto-Dorn so that no newer details about location of discoveries can be seen. Moreover, we encounter a similar attitude against visual aids in the excavation reports published in the annual conference proceedings. In contrast to these, the book includes page-sized views of the surrounding landscape, and, above all, a huge number of large and colorful photos showing tile artifacts.

Her special interest for tiles becomes visible in the second book of Arık *Anadolu Toprağının Hazinesi: Çini: Selçuklu Ve Beylikler Çağı Çinileri* (2007) that she edited together with her husband Oluş Arık. It consists of different articles written on all Seljuk tile discoveries made in Anatolia, but again with a focus on Kabadabad. Like her monography this book contains a great number of illustrations of these tiles, which makes it very valuable for such a study. However, the information on Kabadabad is neither detailed, nor does it provides newer perspectives to the study of the site and to the artifacts.

More to the architectural remains in the surrounding area is presented in the conference proceedings and books that are published independently. While scholars such as Rüstem Bozer<sup>15</sup>, consider the technical features and methods used on the

---

<sup>14</sup> The text contains numerous references to the legends and metaphors, as well as commentaries of the director about the difficulties of the works and problems raised by new findings.

<sup>15</sup> Bozer, "Kabadabad çinilerinde fırınlama sonrası yapılan işlemler ve bazı tespitler" (paper presented at the I. Uluslararası Selçuklu kültür ve medeniyeti kongresi, 2001), Bozer, Selçuklu devri levha

tiles, others focus on the usage of materials that were found during excavation works. Here, papers of scholars such as Zekiye Uysal<sup>16</sup> on glass, Yusuf Acioğlu<sup>17</sup> on stucco decorations, or Alptekin Yavaş on small metal objects such as jewelry or buckles<sup>18</sup> offer insights to the immense number of artifacts found during the excavation campaigns and to the thirteenth century courtly taste.

Simultaneously Arık's students and team colleagues published articles about Seljuk architecture and specific building types in Kubadabad. Alptekin Yavaş -since 2017 the vice director of the excavations under Muharrem Çeken – published about various Seljuk kiosks and kiosk types, as well as, wet spaces in Kubadabad.<sup>19</sup> Ali Osman Uysal has similarly wrote articles about the bathhouses and other buildings found in the complex.<sup>20</sup> However, these articles were focused on details and did not contribute much to the understanding of the complex and its scope.

<sup>20</sup> Uysal, "Kubad-Abad hamamları" (paper presented at the I. Uluslararası Beyşehir ve yöresi sempozyumu, Beyşehir, 2006), Uysal, Kubad Abad sarayının göldeki uzantısı: Kız Kalesi (Konya: Konya Büyükşehir Belediyesi Kültür Yayınları, 2019), Uysal, Kubad Abad sarayının uzağındaki bazı sayfiye yapıları: Hoyran'daki kalıntılar ve Malanda köşkü (Konya: Konya Büyükşehir Belediyesi Kültür Yayınları, 2019).

In this regard, the 2006 published book of a retired teacher Veli Karaca, who has stated to visit the sites in company of Zeki Oral, offered insights to the geography and the history of the region of Yenişar. This book was a less academic and therefore reliable, like locally maintained websites that provide introductory short texts to the historical development of each of the villages – and required a cautious reading. At the end, such text became especially helpful in the reconstruction of the changes that were made on the names of these villages.

In the last years, following the growing interest of the Turkish government, and the mature state of the excavations the number of publications on Kubadabad and Seljuk architecture increased. Amongst others, Arık has published a monography on Seljuk palaces and kiosks, i.e. *Selçuklu Sarayları ve Köşkleri*, which provides an extended description of the results of the archaeological studies in Kubadabad until 2017.<sup>21</sup>

In the first half of 2019, a group of scholars together brought out a monography about Kubadabad with articles on these different aspects of the palace and its artifacts. Despite its rather late publication date for this thesis, the book *Beyşehir Gölü Kıyısında Bir Selçuklu Sitesi: Kubad Abad* has become the main reference book, since it contains most recent results from the excavations, for no new reports have been published on the excavation campaigns since 2016. Furthermore, the papers in this book managed to illustrate the various aspects of the site and to document these with visuals.

Beside these monographies on Kubadabad, further articles and papers have contributed to the understanding of concepts of kingship, court/palace, or decoration and methods in analyzing them. In this sense, articles of art historians such as Otto-

---

<sup>21</sup> Arık, *Selçuklu sarayları ve köşkleri* (Ankara: Ankara Üniversitesi, 2017).

Dorn and Gönül Öney on various motifs of decoration have been useful for the discussion of tiles. The papers published in the *Ars Orientalis* on *Pre-Modern Islamic Palaces* has provided ideas about different elements and organization principles in palaces and the historical development of palace types.<sup>22</sup> The consultation of the literature about Umayyad<sup>23</sup> and Abbasid palaces has shown the traditions and trends of palace architecture. Furthermore, the inclusion of distant geographies such as Al-Andalus have been very helpful in understanding the architectural models of Seljuk palaces.<sup>24</sup>

The link between Kubadabad and the landscape, cities, state, or royal patronage were not particularly addressed in any of the above-mentioned studies. In this case, works of Scott Redford, Andrew Peacock or Suzan Yalman were of help. These works began in contrast to most Turkish studies to put single objects into their original historical context focusing on the aims of their patrons and their purpose or function in Seljuk world. Hence, they started to overcome the gap between art history and history in terms of their methods and sources. In terms of architectural patronage, a few works have been published in the first decade of the twenty first century; amongst other Suzan Yalman's thesis provided an overview about Kaykubad's deeds as architectural patron.<sup>25</sup> Moreover, her work gives an impression about the changing of Seljuk rhetoric under the reign of 'Ala' al-Din Kaykubad. Yalman's argument about the use of *silsile* shows that the person of the Sultan and

his blood played a significant role in the choice of rhetorical devices or signs. Ala al-Din's strategy of combining the maternal Roman or Anatolian and paternal Turco-Persian and Islamic cultures into a new visual language explains and demonstrates the ambiguity as well as the complexity of royal messages. This points to the various traditions that became source of the new Rum Seljuk rhetoric.

The papers and books of Scott Redford show the variety of application fields and methods for the communication of this new Seljuk rhetoric. Redford's publications on official or public building projects such as city walls offer new perspectives to the relation between Seljuk art and architecture and state.<sup>26</sup> However, Redford's articles on palaces, and royal/palatial objects build the basis for this thesis.<sup>27</sup> Particularly his book *Landscape and the State in Medieval Anatolia* and articles concerning the royal Seljuk attitude towards landscape and gardens have been very inspiring and informative.<sup>28</sup>

In terms of Seljuk history Turan's *Türkiye Selçukluları Hakkında Resmi Vesikalar* is to be considered one of the most valuable works on this topic, which has built the basis for later historical surveys by gathering different written sources such as letters, poems, treaties, and many others and summarized them briefly into a bibliographical work.<sup>29</sup> Nevertheless, Turan has reached an international reputation with books dealing with the archival materials on the 'Seljuks of Turkey' and their

#### 4. Objectives, methods, and sources

Ibn Bibi is the author of the book *Al-Awamir al- 'Ala' iyya fi 'l-umūr al- 'Ala' iyya* which narrates the dynastic history of Rum-Seljuks between 1192-1280 in Anatolia and focuses particularly on the reign of the Seljuk Sultan 'Ala' al-Din Kaykubad I. The book - sometimes also entitled as *Seljuknama*, or *Tarih-i Ibn Bibi* –was written in the last quarter of the thirteenth century (around 1282) when the Rum Seljuk realm was already under the mandate of Mongols. Thus, it is not quite contemporary to Ala al-Din Kaykubad's reign, however it constitutes the only Seljuk source from and about the thirteenth century Anatolia and the basis for all later historical studies on Seljuk Anatolia.

The original work was written in Persian prose and enriched with Persian and Arabic verses and quotations from famous works. Its patron 'Ala' al-Din Ata Malik Juwayni was a diplomat appointed as governor in Mongol Baghdad and a historian. Hence, the work was both written by and for the Persian speaking elites in Anatolia and beyond. The book seems to have well appealed to its audience, and copied as a significant historical source for Rum Seljuk history in following centuries.

Although Ibn Bibi's work is the basis of Seljuk histories and studies, the text has not been analyzed adequately for architectural or palatial references and their role in the narrative. Accordingly, the studies and interpretations of Kubadabad which owns a separate chapter in the Seljuk history of Ibn Bibi fell short, since the existing studies only focused on the descriptions of the palace and disregarded its relation and role to the rest of the narration. These studies also disregard the stylistic devices through which further information might be acquired about the ideas and tastes of the Seljuk court during the thirteenth century.

Similarly, a great number of the studies on Kubadabad's architecture, and artifacts ignore the original context of their objects. art historical or archaeological studies that were dealing with the palace as artistic manifestation, pieces of which (artifacts) had to be formally analyzed and categorized according to their materials, techniques, style, and motifs, as well as their artistic development. The problem of these studies is their failure to ask questions about the actual purpose and role of artifacts, for instance in relation to the space, or decoration. Moreover, the palace and courtly life have been rarely related to actual historical events.

However, scholars –amongst other Songül Mecit, Richard McClary - have shown that many commissioned projects were linked to a political or military event, to which the patronized object act as a direct response.<sup>36</sup> The analysis of the relations between architecture and historical events, furnishing and functions, could offer new understanding of the Seljuk culture, as well as Seljuk palaces.

In the light of these problems, this thesis concentrates on the relation between architecture and purpose to fill in the gaps in Seljuk history of the thirteenth century by. What does the location, form and decoration indicate about the functions the palace fulfilled, or the purpose of its construction?

In this regard, this thesis aims in the first line to understand the palace of the thirteenth century based on the example of Kubadabad. The study of archaeological remains and artifacts might help to understand the motives and aims of its patron, ‘Ala’ al-Din Kaykubad I, in commissioning this palatial complex. In the second line, the analysis of the contemporary textual source should further help to reconstruct both the context of this patronage and the message of ‘Ala’ al-Din, as well as the

---

<sup>36</sup> Mecit, *The Rum Seljuqs: Evolution of a dynasty* (New York: Routledge, 2014), Mecit, *Kingship and ideology under the Rum Seljuqs*, Book, Section vols. (Edinburgh University Press, 2011). McClary, *Rum Seljuq architecture, 1170-1220 : the patronage of sultans* (Edinburgh: Edinburgh University Press, 2017).

perception and interpretation of Seljuk courtiers. The analysis of *Al-Awamir al-Alaiyya fi'l-umr' al-Alaiyya* written by a Seljuk court member, Ibn Bibi, will provide information about the historical events. The present study consists of two main chapters, each dedicated to one of the sources. These chapters present the main data from the archaeological excavations and from Ibn Bibi's *al-Awamir*.

In this regard, the following chapter (Chapter 2) is dedicated to the discussion of the archaeological evidence and excavation results. It aims to understand the functional requirements imposed on and met by the palace, as well as principles of organization and decoration that were used to emphasize different these functions. The first part of this chapter will address historical and physical settings of the region around Beyşehir Lake, including insights to the history of settlements, and routes in this area. For the complex has never been specifically analyzed in relation to the topography, landscape place in which it was located, neither its role in the settlement history of the area. However, focus on these (pre-) existing circumstances can help to understand the motivations that may have played a role in the selection of the site, but also the importance of the site within the Seljuk realm, and for the Sultan 'Ala' al-Din Kaykubad I and Rum-Seljuk rule.

The second part will describe the architectural, artistic, and even technological features of the complex. The discussion of the layout and furnishing will provide information that can be relevant in the identification of different functions incorporated in the complex, and the purpose of building it. The analysis of decorative elements and their composition might further deliver some cultural or ideological hints about the thirteenth century Rum Seljuk court.

The third chapter provides information about the thirteenth century source *al-Awamir al-Alaiyya fi'l-umr' al-Alaiyya* and its author Ibn Bibi. The chapter offers an

insight to political and historical context in Anatolia of the thirteenth century. It reviews Ibn Bibi's narrative in the hope of discovering overlooked details about Kubadabad and palace architecture in three sections; a short introduction provides information about the author, and his patron, 'Ala' al-Din Ata Malik Juvayni (1226-1283). The following part presents then the structure and contents of the book and studies descriptions of palaces as well as the words employed by Ibn Bibi to refer to them. The last part analyzes the episode on Kubadabad with a focus on the application of rhetorical elements describing the palace. It further addresses the role of Kubadabad in the narrative.

The fourth and last chapter provides a summary of the findings of the second and third chapter. It aims to define the main strategies or tools of court rhetoric, as it is presented in these visual and textual sources. What messages do they give? How do these sources communicate messages? What specific motifs or methods are used? Finally, who are the primary addressees of these messages? In the light of these questions the chapter attempts to reconstruct the policies and strategies of 'Ala' al-Din Kaykubad I, and the Seljuk concept of kingship, the organization of the Seljuk state as well as courtly culture and taste.

## CHAPTER 2

### PALACE ARCHITECTURE AS HISTORICAL DOCUMENT

The following chapter inquires the meaning and functions of the thirteenth-century Seljuk palaces in Anatolia based on the archeological data gathered from the excavations at Kubadabad. Accordingly, it first analyzes the location and scope of Kubadabad providing a basic notion about its relation to settlement structures, main Seljuk cities, and (trade) routes. The focus then moves to the architecture of the complex, intending to define principles of the spatial organization and elements of rhetoric such as specific forms, sizes, or elements that were used to distinguish different buildings or functional spaces. In this regard, further emphasis will be given to the interior decoration, intending to define materials and techniques and to reconstruct the decorative program applied in the decoration of different spaces. The consideration of decoration materials, architectural elements, as well as environmental factors, will further allow a partial reconstruction of courtly ceremonies, the court society, and finally, the state of the Seljuk Sultanate.

#### 2.1 Kubadabad and its scope: The palace complex and its environment

The historic site of Kubadabad is located the southwestern coast of Lake Beyşehir, within the Province of Konya in Turkey.<sup>37</sup> Today, the nearest city Beyşehir - giving

---

<sup>37</sup> In sources from and about the Antiquity, the Beyşehir Lake appears under the name Karalis, Skleros, or Pousgouse. Karalis was used in the Roman period. Ramsay, *The historical geography of Asia Minor* (1890), 389. Özşait, *Hellenistik ve Roma Devrinde Pisidya Tarihi*, İstanbul Üniversitesi Edebiyat Fakültesi yayınları (İstanbul: Edebiyat Fakültesi Basımevi, 1985), Özşait and Özşait, "Arkeolojik verilerin ışığında Beyşehir ve çevresi" (paper presented at the I. Uluslararası Beyşehir ve yöresi sempozyumu, Beyşehir, 2006). Byzantine authors such as Kinnamos and Niketas Choniates,

the lake and its surroundings its name – is in about 25km distance. Konya (Iconium), the Seljuk capital, and other main cities of the thirteenth century such as Kayseri and Sivas, or the critical Mediterranean port towns of Antalya and Alanya are around one hundred kilometers far away.<sup>38</sup> However, Kubadabad's location some kilometers from the passages through the Taurus Mountains connecting Mediterranean shores with Central Anatolian hinterland puts Kubadabad into city and trade networks.

(Appendix A)

The Kubadabad palace complex - the main excavation site –is located on a small cape at the southwestern coast of Lake Beyşehir known today as Tol Mevkii.<sup>39</sup> The term "Tol" probably refers here to the Bronze Age tumulus of 7-8 meters height, at the south of the cape. The freshwater spring called Gürlevi next to the lakeshore further limits the site. Moreover, the complex is separated from the surrounding alluvial plain by high walls of rubble and stone. This enclosed area of around 5200 square meters is the main site of the excavations today. Within the palatial enclosure, scholars have found remains of around twenty different building structures that seemed to be placed without apparent order. These were already visible in the first maps drawn by the architect Curtis Campaigne showing topographical features of the site. Although these drawings were made at the very beginning of the excavations and reflected assumptions based on the visible remains, these maps still maintain their value. The topographical map of the site, for instance, shows the uneven rock

---

however, denote the same lake as Pousgouse or Skleros. Pancaroğlu, "Beyşehir," in *Encyclopaedia of Islam*, THREE, ed. Kate Fleet (Brill, 2013).

<sup>38</sup> Kubadabad palace complex is in circa 100km distance from main Seljuk cities of the thirteenth century such as Konya, Kayseri, Sivas, or the Mediterranean port towns of Antalya and Alanya. See Map of Anatolian Silk routes and Seljuk caravanserais (Appendix A)

<sup>39</sup> In the dictionary of local Turkish dialects published by the Turkish Language Society from 1978, the word "Tol" has been attributed to the dialects of Konya, Kayseri, and Isparta. The word "tol" bears various meanings, including words related to a single construction such as a wall, stable or barn, shed or hut, as well as a small group of houses. TDK, "Tol," in *Türkiye'de Halk Ağzından Derleme Sözlüğü* (Ankara: Türk Dil Kurumu, 1978).

<sup>40</sup> Otto-Dorn and Önder, "Bericht über die Grabung in Kobadabad (Oktober 1965)."

27

The drawings showed at least four sections surrounded by supplementary walls that separated them from others. Three of them were understood as parts of an enclosed complex –today the main excavation site covering an area of 5200 square meters, and an additional court next to it reserved for the hunting ground and garden of the palace. The image of a palace on a cape consisting of three courts with irregular plans evoke already at the first visits of Oral the image of a medieval Topkapı Palace. The comparisons of the complex to the late fifteenth-century Ottoman Palace are still very often used by the Turkish scholarship.<sup>42</sup> Moreover, the organization of the complex successively from the most public to most private functions also was another feature of comparison. Indeed, the position of the buildings and courts within the complex – concerning their relation to the topography, to one another, and finally, in terms of their size and architectural characteristics - suggest that the organization followed a certain hierarchy; from largest to smallest area, and from the most public to most private functions.

According to the excavation team, the outer section - the hunting garden of the palace – covered a vast area served both as a leisure space, and as a border zone between the outside world and the secluded palace. According to Arık, the main entrance to the complex was in the south, somewhere between the Tumulus and Gürlevi. However, the original gate did not survive.<sup>43</sup> The gate led to the next section located within the enclosed complex. In other words, it connected the garden with the complex.

---

<sup>42</sup> First comparisons between Kubadabad and Topkapı Palace were made by Oral. His assumption was particularly linked to the idea that Kubadabad was the center of a city that evolved around the palace. Oral, "Kubad-Abad nasıl bulundu?." His example was followed by Arık and her excavation team until present day. Arık, Selçuklu sarayları ve köşkleri. Yavaş and Koçyiğit, eds., Beyşehir gölü kıyısında bir Selçuklu sitesi: Kubad Abad, Konya Büyükşehir Belediyesi Kültür Yayınları (Konya: Konya Büyükşehir Belediyesi Kültür Yayınları, 2019).

<sup>43</sup> Arık, Selçuklu sarayları ve köşkleri.

The area next to the entrance, which is generally denoted as the “First Court” in similarity to Topkapı, housed multiple buildings with different forms and functions. In this section was assumed to be the largest and most public area of the complex, reserved for various workshops and palace services. It further borders on the other two courts in the east and north directions. The court at the east covers a smaller area with a central building in the middle and small structures along the side walls. There is further a shipyard on the shore east of the court which might belong to this court, or not. Although Uysal mentions that this part might be the safest due to the thick walls surrounding it, it has been determined as the “Second Court”. The “Third Court” at the northern tip of the cape has the smallest area consisting of a large palace building, a large terrace on the north overlooking the lake, a bathhouse on the east, and a small courtyard in the south.

Over the years the excavation team has found remains of many other structures in the surrounding area of Kubadabad Complex spread through alluvial plain between the Lake and the hills, and additional buildings on the islands. The following map helps to understand the assumed relationship between the complex and its surrounding area. (Figure 3) It shows in the close neighborhood of the excavation site, within which most remains from the Seljuk history were found. Based on their distance from the complex, the influence or scope of Kubadabad Complex might be suggested to have reached around three to five kilometers in minimum.<sup>44</sup>

---

<sup>44</sup> The modern villages Gölyaka, Pınarbaşı, and Yenice mark approximately the boundaries of the area. Gölyaka (former Hoyran) is in around three, Pınarbaşı (former Kürtler) around four, and Yenice nearly five kilometers distance from the Kubadabad Complex. Further structures were also found on the islands and in the hinterland. Besides of the architectural remains on the islands - above all the Maiden Castle (Kız Kalesi) in three kilometers distance from the complex at the lakeshore- remains of a Seljuk kiosk from this period has been found in Malanda at eleven kilometers from the site. Arık has conducted an excavation campaign in 1992 and argued that the kiosk was somehow connected to Kubadabad. Arık, "Kubad-Abad /Malanda yüzey araştırması," Kazı Sonuçları Toplantısı, no. 11

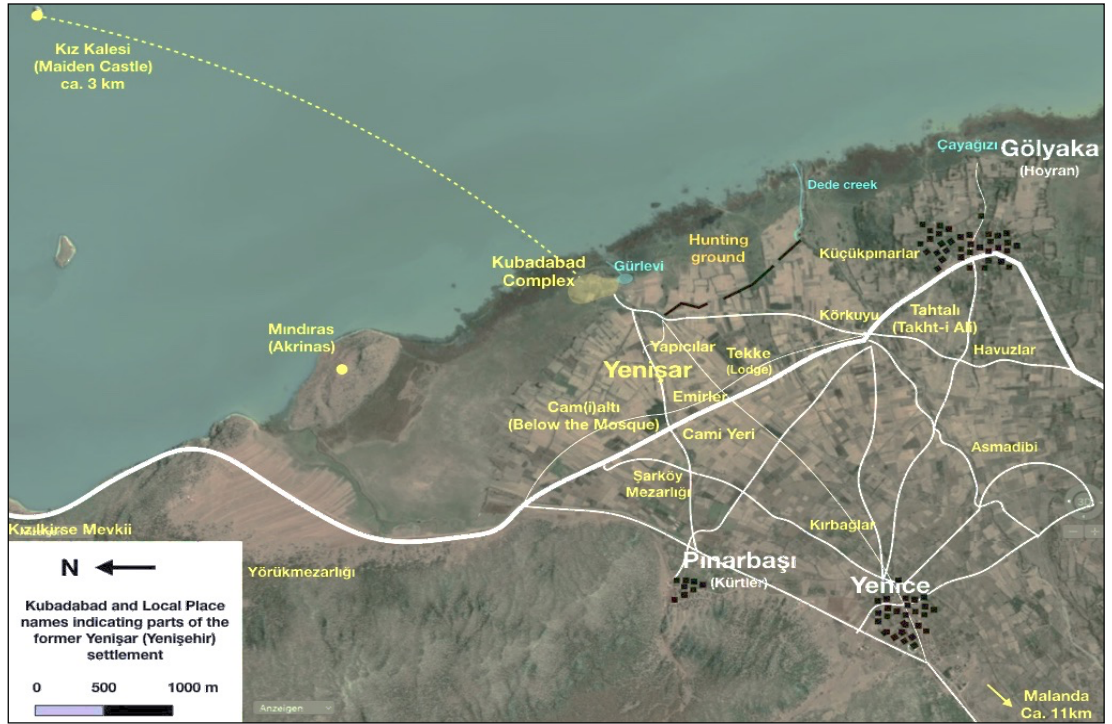

Figure 3. Map showing Kubadabad Complex and the extent of the settlement<sup>45</sup>

These villages belonged historically to the district called Yenişar, which still is the name given to the area.<sup>46</sup> The name Yenişar (or Yenişehir) meaning “new city” was suggested to derive from the assumed settlement which evolved in the neighborhood of the complex following its construction, and declined slowly after the death of the patron ‘Ala’ al-Din Kaykubad I in 1237.<sup>47</sup> However, it is difficult today to find a lot

(1993), Arık, Kubad Abad: Selçuklu saray ve çinileri, Arık, New information and perspectives on Seljuk art obtained throughout the Kubad Abad palace excavations (2010), Arık, Selçuklu sarayları ve köşkleri.

<sup>45</sup> Uysal, Kubad Abad şehri ve kalıntıları, 105.

<sup>46</sup> Yenişar was used in historical documents to describe a district, which corresponds mainly to the Yenişarademli, a municipality in the territory of the Isparta Province today. In his paper on Kubadabad’s rediscovery, Oral mentioned under the title of Yenişar villages five villages (Hoyran, Kürtler, Muma, Bademli, and Yenice) around the historic site. He further recorded that the villages of Yenişar were spread through an alluvial plain of 8km between the Anamas Mountains – a branch of the Taurus Mountains with the highest point on Dedegöl Tepesi – and the Lake Beyşehir by 10 km along the lakeshore. Oral, "Kubad-Abad nasıl bulundu?," 173-174.

<sup>47</sup> For the argument about a Seljuk city around Kubadabad see: *ibid.* ; Uysal, Kubad Abad şehri ve kalıntıları. Ottoman accounts on Beyşehir as early as from the reign of Beyazid II (1447-1512) mention Yenişar as one of the eight districts (*nahiye*) of Beyşehir owning around ten villages in total. The reconstructed map of Beyşehir from 1530 in the published facsimile of the ledger of the Karaman and Rum provinces shows all settlements around Lake Beyşehir including the ones named by Oral. Yıldırım, "1530 Tarihinde Bey-Şehri livası," in *Defter-i hâkânî dizisi III*, ed. Binark and Başkanlığı (Ankara: T.C. Başbakanlık Devlet Arşivleri Genel Müdürlüğü, Osmanlı Arşivi Daire Başkanlığı, 1996). Nevertheless, it seems that the settlement structure has changed, and the villages around seem

remains and other evidence for the former city, since most parts of it – so they argued - were spoliated or flooded by the rising of the water levels of the Lake Beyşehir.<sup>48</sup>

Nevertheless, there are remaining structures from this Seljuk period in this area, which were first recorded by Oral during the early 1950s, as he visited the region in search for the exact location of Kubadabad.<sup>49</sup> Spolia taken from the Seljuk complex was further used in the construction of various buildings and houses in the villages - some visibly - such as in the village mosques of Yenice and Pınarbaşı. A spoliated masjid inscription dated 1236 particularly was very significant, since it allows the identification of the remains as belonging to Kubadabad, and provided evidence about the character of Kubadabad in the thirteenth century. (Figure 4)

The inscription was along some other spoliated parts from the Seljuk period included into the exterior decoration of the simply built sacral building, and verify the existence of a Seljuk mosque that was built during ‘Ala’ al-Din Kaykubad’s reign. The inscription was placed above the entrance on the eastern side of the rectangular plan and two architectural elements with geometrical *giriş* motives.<sup>50</sup>

---

to have changed their names, developed, or abandoned, and to have disappeared. Karaca, Belgelerle Yenişar (Kardelen Sanat Yayınları, 2005).

<sup>48</sup> The changing shorelines constitutes one of the main reasons behind the difficulties in locating, or finding evidences for early settlement structures in the coastal area of Beyşehir Lake. Historical surveys, for instance by Hüseyin Muşmal, have shown that the rise of the water level, sometimes in form of floods, had a negative effect on the on the development of the Lake Beyşehir area. Muşmal, "XX. Yüzyılın başlarında Beyşehir gölü ve 1910-1911 yılları büyük taşkın hadiseleri," Selçuk Üniversitesi Türkiyat Araştırmaları Dergisi, no. 23 (2008). Following these, the rise of the water level was further related to the absence of further historical remains. Karaca has mentioned that the (urban) settlement around Kubadabad Palace - referred in historical documents as Kubadabad city, or Yenişar (meaning “new city”) - was flooded, and remain in some areas visible. Karaca, 132-133.

<sup>49</sup> Oral, "Kubad-Abad nasıl bulundu?."

<sup>50</sup> Oral has described the existing structure in his article, and gave detailed notes on Seljuk and earlier elements of this building. The article includes further photographs and the transcription and interpretation of the above-mentioned inscription. Oral, "Kubadabad bulundu." Oral, "Kubad-Abad nasıl bulundu?," 175-176.

 الوالى بقباداباد فى رمضان سنه ثلث و ثلاثين و ستمائه

Figure 4. Detail from the original Seljuk inscription from the mosque of Kubadabad<sup>51</sup>

The Arabic inscription consists of the following six lines;

*“And [He revealed] that the masjids are for Allah, so do not invoke with Allah anyone.” (72; 18) This masjid was built in the days of the reign of almighty sultan ‘Ala’ al-Din Kaykubad, the son of Kayhusraw, – may God perpetuate his sovereignty – by his weak servant Badr al-Din Sutash (or Savtash), governor of Kubad Abad in Ramadan of the 633 H. (1236).<sup>52</sup>*

The inscription begins with a citation from Surat Al-Jinn (72; 18) about the dedication of masjids to Allah only. The text further includes a laudatory dedication of the masjid to ‘Ala’ al-Din Kaykubad I, as well as name of its patron Badr al-Din Sutash, who has built the original structure in (H 633/1236) as the governor of Kubadabad. This inscription is of crucial importance since it does date the building to the reign of ‘Ala’ al-Dīn Kaykubad I, and provides its patron’s name and title. The entitlement of the patron as the governor (*vali*) of Kubadabad indicates that the area had become a (semi-autonomous) province (*vilayet*) centered on the palace.<sup>53</sup>

Hence, the inscription mentioning title of the patron illustrates not only the social and administrative system and their attitude towards patronage, but it proves

<sup>51</sup> Uysal, Kubad Abad şehri ve kalıntıları, 106.

<sup>52</sup> Oral, "Kubad-Abad nasıl bulundu?," 175-176.

<sup>53</sup> According to Baykara and Peacock, the areas that were considered as border zones (*uc*) of the Sultanate held the same status as province (*vilayet*). Peacock argues that Seljuks saw the region of Beyşehir as a border zone, not only because of byzantine treat, but because Turkmen tribes established their dominion in this area. Peacock, Court and nomadic life in Saljuq Anatolia, Baykara, "Türkiye Selçuklularında idari birim ve bununla ilgili meseleler," Vakıflar Dergisi, no. 19.

that the area around Kubadabad complex has been upgraded into a center of an administrative unit.<sup>54</sup> This fact suggests that the settlement density and the population grew with the building of the palace, supporting the arguments of Oral and later scholars in regard of a city that was known as Yenişar or Kubadabad.<sup>55</sup> Besides, local place names such as “Cam(i)altı”, or “Cami Yeri” indicate that the original spot of this masjīd probably laid just between Pınarbaşı (Kürtler) and the excavation site. In the close neighborhood of the assumed masjīd names of further religious structures are known today. For instance, the place called “Şarköy Mezarlığı” suggest that the graveyard of former settlement Şarköy (i.e. Yenişar) once located here.<sup>56</sup> Furthermore, the names such as “Tekke” for a Sufi lodge, the remote “Kızılkirse” denoting probably the location of a church or monastery –which were widespread in the Beyşehir region during the medieval period, or “Yörük Mezarlığı” indicating the existence of nomadic groups here, reflect the multilayered culture around Kubadabad.

The remains of the Seljuk period were however not limited to the used spolia or religious spaces. Oral has recorded further settlement remains. The roads and boundary lines following the remains of former walls of the hunting ground of the palace complex reached to the place called “Tahtalı” (i.e. *Takht-e Ali*) within the village of Gölyaka, where Oral recorded remains of a building that he assumed was a bath (*hammam*).<sup>57</sup> Moreover, the area called “Emirler” implies that the houses or villas of Seljuk amirs mentioned in the Ibn Bibi text might have been once located in

---

<sup>54</sup> Oral, “Kubad-Abad nasıl bulundu?,” 175-177. In term of administrative unites in the Rum Seljuk Anatolia, the book, and articles of Tuncer Baykara can be helpful to understand the differences between grades, functions, and terms of different units. Baykara.

<sup>55</sup> However, the denotation of the structure as a “masjīd” instead of a “mosque” weakens to argument of a large city around the palace, but does not fully eliminate the existence of a smaller settlement.

<sup>56</sup> Uysal notices that no Seljuk graves with inscriptions were found in this area to prove the history of the settlement. Uysal, *Kubad Abad şehri ve kalıntıları*, 108.

<sup>57</sup> Oral, “Kubad-Abad nasıl bulundu?,” 175. Uysal has doubted the assumption that this was a bathhouse as Oral and later I.H. Konyalı have argued. Uysal, “Kubad-Abad hamamları,” 95-96.

the close neighborhood of the palace.<sup>58</sup> Similarly, the construction workers and craftsmen were probably settled outside the complex walls.

These examples show that Kubadabad, in contrast to palaces in cities, should not be just as an enclosed complex with palatial functions, but as a countryside estate that required additional areas and structures to meet the comfort of a royal seat.

Redford has stated in relation to this that Anatolian Seljuk palaces “overlap typologically and functionally with structures like caravanserais, fortification towers, garden pavilions and tomb towers usually identified with single functions: commercial, military, domestic and memorial/funereal respectively.”<sup>59</sup>

In this sense, these place names further allow understanding of the relation between the Seljuk palace natural resources and the agricultural activities around it. (Figure 3) The denotations using the terms “spring” (*pınar*), “creek” (*çay*) or “well” (*kuyu*) indicate the rich water sources in the area. Nevertheless, the remaining fragments of pipelines leading from Yenice to the complex demonstrate that a pipe system transported freshwater from the mountains to Kubadabad.<sup>60</sup> In relation to the water supply, further place names on the map including words such as “grapevine” (e.g. Asmadibi Mevkii), “garden” (e.g. Kırbağlar Mevkii) or “meadow” (Çayır Mevkii) depict the natural and agricultural environment of the complex that possibly derived from the Seljuk period.

In addition to these, there were also military structures for security in the region that has been largely ignored in academic papers. The security issue is often

---

<sup>58</sup> Ibn Bibi, *El Evamirü'l - Ala'iyе Fi'l - Umuri'l - Ala'iyе* (Tıpkıbasım) (Türk Tarih Kurumu Basınevi, 1956). In addition to the reports of Ibn Bibi about the building of such villas, there is physical evidence of kiosks or villas that were built, for instance in Alara, or Obaköy, thus in closer region of the Sultan's winter residence in Alanya. The kiosks in the region of Kubadabad, amongst others the kiosk of Malanda can be similarly attributed to the ruling class. Arık suggests that these belonged either to the ruler himself, or to the Seljuk elites. Arık, "Kubad-Abad 1992 yılı kazısı," *Kazı Sonuçları Toplantısı* 2, no. 15 (1993): 35.

<sup>59</sup> Redford, *Anatolian Seljuk palaces and gardens*, 231.

<sup>60</sup> Oral, "Kubad-Abad nasıl bulundu?," 176.

discussed with the emphasis on the hidden location of Kubadabad, as well as the building remains on various islands that were amongst other assumed to have fulfilled the purpose of watching posts.<sup>61</sup> There is evidence that the islands housed kiosks, houses, as well as stables and probably stations for security.<sup>62</sup> Nevertheless, Arık indicates that the team has not been able to survey them to determine their affiliation and purpose. The ruins of the Seljuk castle known as Kız Kalesi (Maiden Castle), on the nearby island with the same name is an exception. The excavations under Arık concentrated between 1982-85 on the Kız Kalesi Island<sup>63</sup> located around three kilometers from the Kubadabad complex at the shore.

The castle covers the whole island equaling an area of around 3000 square meters. It is suggested that the Seljuk castle was built as an annex to the palace complex on the ruins of a byzantine castle or monastery.<sup>64</sup> It is formed as a complex consisting of various buildings – a kiosk, a bath (*hammam*), a (byzantine) chapel and outbuildings. The access to the complex was given through a main gate on the western shore, which is closer to the main land.<sup>65</sup> It was formed as a rectangular hall with a vaulted ceiling and an annexing iwan probably used by the guards. The small

<sup>61</sup> Türker, "Kubad Abad ve Kız Kalesi kazılarında Bizans dönemini temsil eden buluntular" (paper presented at the I. Uluslararası Beyşehir ve yöresi sempozyumu, Beyşehir, 2006).

<sup>62</sup> Arık, "Kubad-Abad 1992 yılı kazısı." Arık, "Türk Kültürüne yönelik arkeolojik araştırmalar ve Kubadabad Kız Kalesi kazısı," Ankara Üniversitesi Dil ve Tarih Coğrafya Fakültesi (1987).

<sup>63</sup> Uysal, Kubad Abad sarayının uzağındaki bazı sayfiye yapıları: Hoyran'daki kalıntılar ve Malanda köşkü, 199-201.

<sup>64</sup> Arık assumes a Byzantine castle or a Christian monastery at this remote location. Arık, "Kubadabad 1984 yılı çalışmaları," Kazı Sonuçları Toplantısı, no. 7 (1985). It is questionable in what state –either as a ruin, or in a functioning state- the Seljuks took over this small building. Moreover, it would be interesting to know more about the Seljuk approach towards such reused structures. However the only historical evidence about the Seljuk period of this castle seems to be from the reign of the Seljuk Sultan Ghiyath al-Din II, was suggested to have sought here shelter from the Babai uprising. Uysal, Kubad Abad sarayının göldeki uzantısı: Kız Kalesi. Thus, it was meant to provide protection and seclusion. However, the actual purpose of the castle is still controversial. In reference to studies on the Seljuk harem and women, Shukurov indicated that the castle might have served partly as a harem, where Christian women had a small chapel for their religious services. Shukurov, Harem Christianity: The Byzantine identity of Seljuk princes ( I.B.Tauris, 2013).

<sup>65</sup> Another point of entrance to the castle was located in the north. Uysal, Kubad Abad sarayının göldeki uzantısı: Kız Kalesi, 190.

structures next to it were denoted as chapel – identifiable through Christian finds such as fragments of crosses, coins, or parts of a mosaic floor, and a bath (*hammam*) with fragments of the pipe system and in situ tiles from the decoration.<sup>66</sup> The main building built as a two-storied kiosk is in the middle at the highest point of the rocky island. The kiosk sat on a rectangular plan (11 x 15 m) in the southwest- northeast axis and mainly formed by a long hall or anteroom and two iwans flanking it on the northeastern end. The building seems to be covered with cut stone both on the in- and outside. At the south-east, there is further a long structure, which consists of many small cells aligned along the walls, as if they were used as monks' dormitory or as storage place.

In terms of military structures, Veli Karaca's local history -as the only source- provides a list of ten different castles or towers (*kale*) within a radius of nearly twenty kilometers from the palace complex that have been preserved.<sup>67</sup> The nearest and thus the most important of these castles is Mindıras<sup>68</sup>, which is positioned only at two kilometers distance from the complex and at 1213 meters height. (Figure 3) Thus, the Seljuk dominance in the region was ensured through the construction of the Kubadabad palace as a center of administration and royal seat, as well as network of military structures such as watchtowers and castles that connected the remote "border zone" (*uc*) and hidden area between mountains and the lake to the rest of the

---

<sup>66</sup> Türker.

<sup>67</sup> The 2006 published book of a retired teacher Veli Karaca, who has stated to visit the sites in company of Zeki Oral, offers the most comprehensive material on the history of the region of Yenisar. He mentions Mindıras, Kestel, Geledos, Kalatepe, Doğdu, Ortatepe, Dede, Maltepe, Aktepe, and Kocatepe. Karaca, 22-23. These were not specifically identified to be Seljuk structures, on the contrary, Karaca rather suggested that some them probably originated from the ancient times. Nevertheless, their survival over centuries suggests that they were in use under the authority of different cultures including Seljuks. Karaca further illustrated the locations of these buildings and other sites on a map. However, this map is difficult to read and contains too many locations that are not related to the Seljuk complex. Ibid. Harita 2

<sup>68</sup> Karaca assumes that the castle of Mindıras - owning its name the island or peninsula of Mindıras on which it was placed – was formerly known as Eğrinas or Akrinas. Ibid. 22-23 Ibn Bibi mentions the place of Akrinas as the site discovered by Sultan 'Ala' al-Din Kayubad I. This topic is discussed in more detail in Chapter 3.

Seljuk realm. The connection was further established through the inclusion of the area to Seljuk the road and caravanserai network. It has been already implied at the beginning of the chapter that the southern part of the Beyşehir Lake, and hence Kubadabad, was on the conjunction point of the roads connecting north and south as well as east and west. According to the primary surveys of the area by Oral, in the 1950 remains of the road between Kubadabad and Antalya with stone flooring were still visible near the village of Bademli.<sup>69</sup>

This demonstrates that Kubadabad - although seemingly remote from the main cities and routes – was well connected to the Seljuk realm not only by routes, but as an administrative and military unit (*vilayet*), a royal seat, and as a settlement. The analysis of the palatial environment has demonstrated Kubadabad's sphere of influence extending over 10 to 15 kilometers into the countryside, with a central walled palace complex and a settlement within a five-kilometer radius around it.<sup>70</sup> Kubadabad fulfilled all kinds of functions ranging from palace and administration, to settlement and from production to protection in conformity with the given environmental circumstances within this scope.

## 2.2 Courts, walls, and access: Organization of the complex

In similarity to the spatial organization as illustrated above, the complex has been arranged in different areas of control that were organized according to specific

---

<sup>69</sup> Oral, "Kubad-Abad nasıl bulundu?," 177.

<sup>70</sup> The outer limits of Kubadabad's sphere of influence can be measured based on either the remotest tower named by Karaca in ca. 15 km distance, or in the Seljuk kiosk of Malanda ca. 11 km far from the palace complex. Karaca, 22-23. Arık, "Kubad-Abad 1992 yılı kazısı." Arık, "Türk Kültürüne yönelik arkeolojik araştırmalar ve Kubadabad Kız Kalesi kazısı." Uysal, Kubad Abad sarayının uzağındaki bazı sayfiye yapıları: Hoyran'daki kalıntılar ve Malanda köşkü.

functions. Two different parts are visible; the first part entering the palatial area seems to serve as encampment and leisure spaces and consists of two or more walled sections. The second, the core living space, was located on a rocky cape at the lake shore, comparable to a citadel surrounded by walls and topographically raised from the surrounding plain up to ten meters. The core (i.e. the main site of excavations) with nearly twenty different structures fulfilled multiple functions on an area of nearly 5200 square meters, consisting of three or four sections, or courts that have been separated from one another through secondary walls. Further two or more courts were added to the complex. (Figure 5)

The organization of the complex in courts was based on principles of hierarchy and functionality. The courts were arranged from the outside to the innermost providing gradual security and seclusion as far as the courts at the lakeshore were isolated from the plain by three prior courts and as many layers of walls. In accordance with increasing privacy, these sections varied in their size from largest to smallest area, and in their purpose from the most public to most private functions. In the following text, the courts will be introduced according to their order from outermost to the innermost to show the principles of spatial organization.

The complex is arranged in sections leading from southeast towards north west. The outer part of the complex, hence, is an extension to the elevated core at the shore to the plain in the south, and serves as a transitional space between the palace and the settlement.

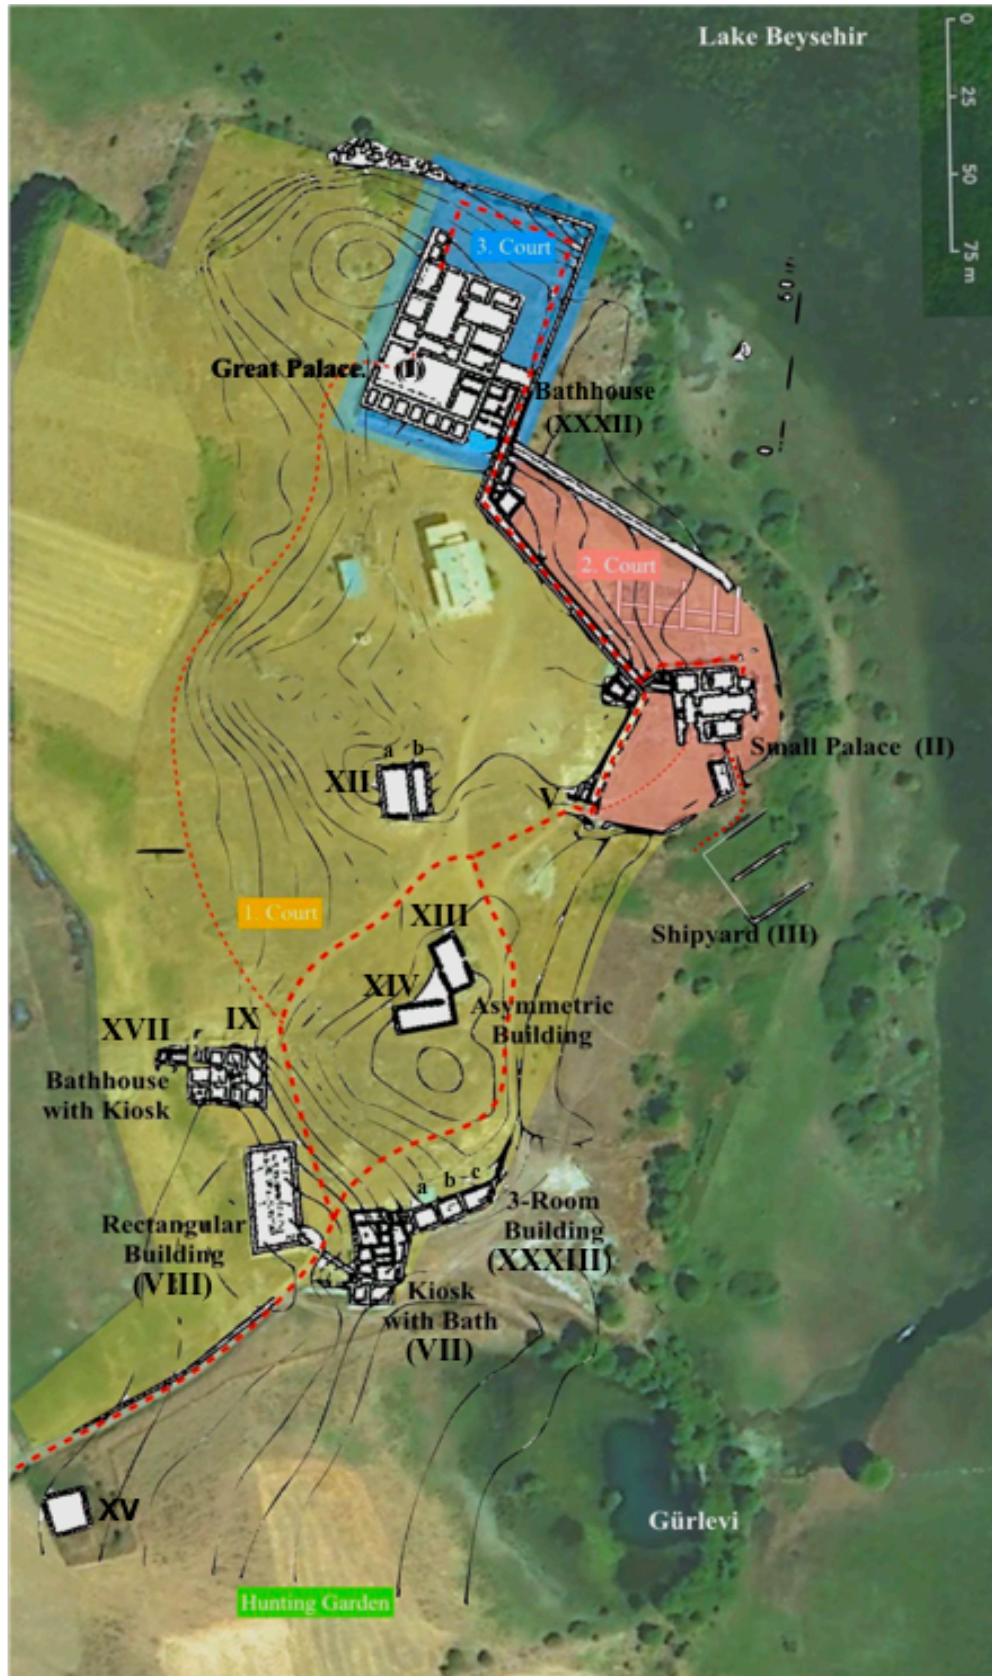

Figure 5. Map of the Kubadabad Palace Complex showing the different courts, important buildings, and access ways<sup>71</sup>

<sup>71</sup> Map produced by the author based on the plans published by Arık and satellite views.

This outer part was suggested to extend over the vast area between the tumulus in the west towards the place in the village of Gölyaka which locals today denote as *Takht-e Ali*. It was probably used as the private hunting ground (*paradeison*) as the local place name “Avlak” indicates, or a (zoological) garden of Kubadabad Palace. The remaining parts of the walls and formations in the landscape suggest that this garden area of 744’975 square meters was surrounded by a 30cm-thick rubble wall with 1155 meters length and 645 meters depth was formed parallel to the shoreline.<sup>72</sup> However, it remains unclear whether the access to the complex given through this garden.

The walls and ruins of some small structures differentiate the area between the garden and the core enclosure from the rest of the *paradeison*. Although no clear statements have been made about the interdependence of these sections, the topographical map made by Campaign indicate the existence of a separate court from the hunting ground.<sup>73</sup> The map has shown walls going around the source of Gürlevi, because of which Otto-Dorn mentioned the source as a dam.<sup>74</sup> (Figure 2) The course of these walls is today still visible. In accordance with this the excavation team has found a structure with a small rectangular plan outside of the walled complex (XV), which Uysal assumed to be a tower the function of which was somehow linked to the hunting ground southwest of it.<sup>75</sup> (Figure 5) Future excavations around the walls and the spring of Gürlevi will hopefully provide more information about the function and outlook of this area, but in regard of the drawings, knowledge about the itineraries of the Sultan with his entourage, and the narrations about the tradition of

---

<sup>72</sup> Oral, "Kubad-Abad nasıl bulundu?."

<sup>73</sup> This division is suggested in regard of the differentiation between the inner and outer Peacock and Yıldız, 38, Redford, Landscape and the state in medieval Anatolia: Seljuk gardens and pavillions of Alanya, Turkey.

<sup>74</sup> Otto-Dorn and Önder, "Bericht über die Grabung in Kobadabad (Oktober 1965)." See Figure 2

<sup>75</sup> Uysal, Kubad Abad saray külliyesinin mimarisi, 112.

encampments<sup>76</sup>, this walled area could be seen as an enclosed garden with some important structures such as toilets and baths to serve soldiers as a camping ground in the manner of Umayyad *qasrs*.<sup>77</sup> If so the entrance to the complex might be given directly from this area.

The excavation team believed that the main gate leading to the enclosed complex was located somewhere on the walls between the tumulus and Gürlevi. The gate led from the hunting garden to the first courtyard of the complex, which covered the largest part of the complex. This “First Court” constitutes the main space providing access to the different parts of the complex. It was limited from the southeast with the outer garden enclosure, from the east/northeastern side with the court housing the “Small Palace” and from the north/northwestern side with the “Great Palace”. (Figure 5) It housed the remains of various single or double storied buildings providing space for dormitories, workshops, and a kiln for tile production, as well as, toilets a cellar, and a well.

The rectangular building (VIII), for instance, had an open ground plan divided only through a raised platform into two long and narrow spaces. The simplicity of spatial organization suggested that this building might have functioned as workshop, especially during the construction of the palace. Arık further assumed that this building might have then housed dormitory for Seljuk guards. Another structure (XXXIII) with a rectangular plan formed by the alignment of three rooms was also identified as workshop. The building was placed between the first court and

---

<sup>76</sup> Ibn Bibi mentions that Ala al-Din Kaykubad sometimes enjoyed to camp with his entourage at every lake and riverside during his journeys. Ibn Bibi, *El-Evamir, 'l-'ala'iyye fi'l-umuri'l-'ala'iyye*, trans. Erzi and Lugal, vol. I (Ankara: Türk Tarih Kurumu Basımevi, 1957). The anecdotes about the Sultan's encampments with the army in palatial surroundings such as Filobad, Aksaray or Mashad plain near Alanya further illustrates how these encampments functioned. Redford argues that Seljuk suburban palaces and Kubadabad were constructed like caravanserais on significant passages. Redford, Beach and Luzzadder-Beach, 893., 67-69, 75.

<sup>77</sup> Hillenbrand, *Islamic architecture: Form, function and meaning* (Edinburgh University Press, 1994).

the garden area with door opening towards Gürlevi suggesting suggested that the function of this building was closely linked to the hunting garden. The existence of herds in the western (a) and middle (b) rooms further indicated that it might be formerly used by smiths.<sup>78</sup>

Amongst these buildings, two kiosks with bathhouses –a combination known from Umayyad desert palaces - were located here. The Western Kiosk or "Hamamlı Köşk" (IX) with an integrated bathhouse situated to the northwest of the rectangular structure (VIII). The entrance to the residential part is given through a vestibule. It opens to a central space surrounded by smaller rooms. The bath (*hammam*) in the north west of the building consisted of a resting or changing room (*apodyterium*), two heated rooms - a warm (*tepidarium*) and hot (*caldarium*) - as well as a cistern and a furnace (*külhan*) that were arranged in line. The second building (VII) housed a large hammam, which distinguished itself from the first kiosk through additional rooms, as well as the organization of these allowing two different accesses. The existence of vertical pipes, further suggested that this building had an upper level. The floor of the warm room (*tepidarium*) was covered with two different tile types; turquoise glazed hexagonal tiles of 30cm diameters, and rectangular tiles as big as 40x30 cm decorated in cobalt blue and white zigzag pattern, like the examples found in Alanya Citadel.<sup>79</sup>

All these buildings stand without a visible order in the landscape, facing different directions. Despite the differences in their forms and positions, these buildings form a coherent group. They are connected through small wall sections that

---

<sup>78</sup> Arık, Selçuklu sarayları ve köşkleri, 169-170. Uysal, Kubad Abad saray külliyesinin mimarisi, 120-126.

<sup>79</sup> Arık, Selçuklu sarayları ve köşkleri, 169-175. Uysal, Kubad Abad saray külliyesinin mimarisi, 117-122. On the zigzag pattern see also: Redford, "Portable palaces: On the circulation of objects and ideas about architecture in medieval Anatolia and Mesopotamia."

were built during a later construction phase at the price of destroying small parts of the buildings. In other words, these structures have been integrated into the wall that separated the courtyard from the outside and marked an irregular course of the wall that only survived in remains. The buildings, especially working spaces, have simple rectangular plans consisting of maximally three separate rooms. The living quarters and baths, in contrast, have a basic plan with rooms surrounding a central space. This basic plan was adjusted according to the building site, and was extended through the repetition of the same layout, if required. These show in sum that the buildings of the first court had similarities in their planning.

The second courtyard to the northeastern side of the first was surrounded by walls that separated it from the other courtyards and from the outside. (Figure 6) The walls on the lakeside reached a depth of one meter and secured it against enemies, and what is more, from a possible landslide or flood. In this regard, Uysal noted that this area was the most secure in the whole complex.<sup>80</sup> The second courtyard was accessible through a monumental gate on the southwest (V). The remains of the structure suggest that the gate was formed as an iwan.<sup>81</sup> Nevertheless, there was a hidden gate and a stairway on the lakeside that provided access to the shipyard (III) on the shore, which was not clearly identifiable as belonging to any of the aforementioned courtyards yet.<sup>82</sup>

<sup>82</sup> Both Uysal and Arık discussed this shipyard in their latest works as an independent entity outside of the enclosed complex. Uysal, Kubad Abad saray külliyesinin mimarisi, 150-151. Arık, Selçuklu sarayları ve köşkleri, 187-189.

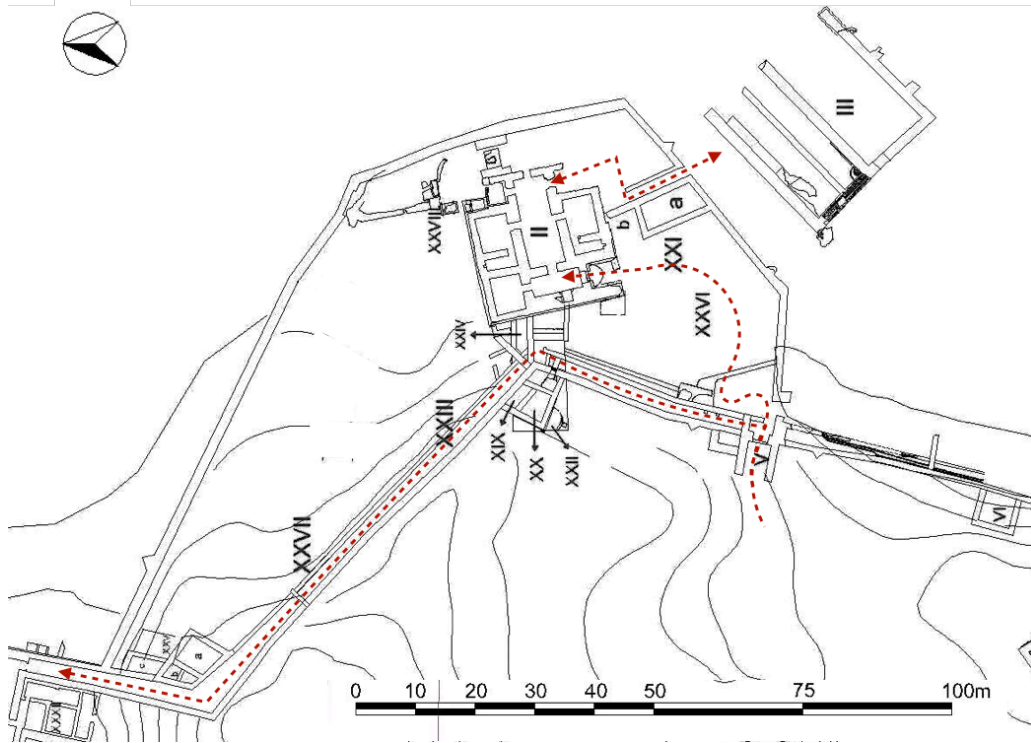

Figure 6. Plan of the second court with indicated access ways<sup>83</sup>

In contrast to the first, this courtyard housed only one monumental building at its center, and small structures such as fountains and small pavilions up to two stories annexed to the walls.<sup>84</sup> Despite the main building denoted as Small Palace (II) – which will be discussed in the next section, the raised platform appears to be a significant feature of the second court placed as narrow terrace along the western walls. The platform was accessible through stairs to the north of the monumental gate and reached to the gate on the northwest that connected the second court directly with the third. In this regard, it seems to be used as a pathway between the palaces. The path followed the western wall of the courtyard, proceeding straightforward to the north, and forking on the same level as the Small Palace.<sup>85</sup> After the bend, the platform towards the Great Palace gives its place to the few steps, so that the

<sup>83</sup> Fragment from the Kubadabad Plan published by Uysal. Uysal, Kubad Abad saray külliyesinin mimarisi.

<sup>84</sup> Uysal indicated that the walls between the second and third courts were probably rebuilt. Ibid. 127

<sup>85</sup> Ibid. 129-132 Arık, Selçuklu sarayları ve köşkleri, 178-182.

pathway continuous on the same level as the front courtyard of the Great Palace.

Arık states further that the path might have had a wooden pergola construction on top.<sup>86</sup>

The excavation team has found in bend area many artifacts from pre-historic settlements to Seljuk period, which included graves and traces from third and second century BCE<sup>87</sup>, remains of post-Seljuk structures, as well as foundations of fountains and pipes of Seljuk water distribution system.<sup>88</sup> The water pipes run parallel to this platform and diagonal to the slop towards the lake. In the area where the pathway (platform) makes a bend, the team has found evidence for a small rectangular structure with cut stone flooring (?). The discovery of two different pipe systems a vertical pipe outlet on the southern side bringing fresh water to the spot, and drainage pipes running close to the surface towards the lake suggest that a fountain may have been at this spot. The turquoise tiles found in front of this structure indicate further that the fountain was decorated with tiles<sup>89</sup>

The third courtyard on the northern tip of the site stood on an artificial platform rising above the lake covered an area of 50m by 35m that was supported by sea walls. Another, smaller yard complemented the palace building from the south. Hence, the building (I) was placed between two open courtyards; the large L-formed space on the lakeside functioned probably as a private garden with small pavilions to enjoy the lake panorama, and provided - in combination with the above-mentioned

---

<sup>86</sup> Arık, Selçuklu sarayları ve köşkleri, 179.

<sup>87</sup> Arık, Kubad Abad: Selçuklu saray ve çinileri, 64.

<sup>88</sup> Uysal, Kubad Abad saray külliyesinin mimarisi, 132-134.

<sup>89</sup> Arık suggested that the fresh water came to this spot probably from Anamas Mountains, and was taken from the natural source called “Gençlik Pınarı” next to the Great Palace. However, there seems to be remains of the pipelines on the plain behind the site that once brought fresh water from the mountains. An additional source of water was Gürlevi, which was turned into a dam. Arık further rejects the idea that the pipe system was a left over from the former Roman settlements in this area. She argues that the two copper coins, one from the reign of Kaykaus I and the other from the reign of Kaykubad I, which were found in the sand and mortar layer underneath the pipe system, prove that this water system was built by the Seljuks., Arık, Kubad Abad: Selçuklu saray ve çinileri, 65-66.

path - access between the two palaces. Additionally, a bathhouse placed in the southeast corner of the L-formed garden. The smaller or front courtyard in the south was rather formed as an interior space with higher walls, floor coverings, a fountain as well as many cells opening to it. The access to the court was given through two different points in the south. The main gate to the northwest of the southern courtyard granted access to the courtyard.<sup>90</sup> A corridor further other connected the front yard to the bathhouse and the L-formed garden. In the light of this, the main palace complex seems to be arranged in at least three sections used for different functions, and characterized by their grades of seclusion and privacy. (Figure 7)

Figure 7. Plan of the third court with indicated access ways<sup>91</sup>

<sup>90</sup> Otto-Dorn recognized that the pipes were built to pass through the opening on the west wall, and suggested that this was the place of the original gate. However, no further evidence was found to reconstruct the original form of this gate. Otto-Dorn and Önder, "Kubad-Abad kazıları 1965 yılı ön raporu," 238. Otto-Dorn, Bericht über die Grabung in Kobadabad 1966, 438-441.

<sup>91</sup> Section from the Kubadabad Plan published by Uysal. Uysal, Kubad Abad saray külliyesinin mimarisi.

At least two important facts about the spatial organization of these courtyards give a clue about the function of this path. On the one hand, the first courtyard was not directly separated from the first court by walls, but only by distance and elevations in the topography. On the other hand, the path started immediately at the entrance of the second courtyard and provided access to the Small Palace, as well as, to the next yard.

In consideration of these facts, it can be assumed that the pathway was used as a ceremonial route. Visitors entered the complex through the gate on the south, passed the first courtyard - eminent guests probably on horseback. Hereby, they chose between two roads that run around an elevation of around eight meters in height. The excavation team has located on top of it a structure with two rectangular spaces. Concerning its position, asymmetrical organization, and small size, Uysal suspected here the foundations of a (watch-) tower. Following either the western or the eastern walls, visitors arrived at the monumental iwan gate opening to the more secure and private section of the complex. From here, they could reach the Small Palace through the yard or the pathway. As the ceremonial route, the raised platform offered beautiful sights of the Small Palace and the vast garden around it that was equipped with fountains with turquoise tiling, as well as of the Lake Beyşehir. At the same time, the height of the platform rendered the viewer visible for others.

### 2.3 Palace architecture and decoration

Of all structures within this enclosure, two edifices were identified as palatial buildings, and became particularly central to the excavations and studies; these structures denoted as “Great Palace” and “Small Palace” stand out from the group of

other structures by their size. The building called Great Palace (I) covers a rectangular area of 50 by 35 meters including the southern (i.e. front) courtyard which as mentioned before - is built as an inner courtyard. The Small Palace (II) in contrast has a nearly square plan with a side length around 23-24 meters. The following table shows the measures of some of the larger buildings in the complex.

Table 1. Measures of some buildings in the Kubadabad complex

<b>Building</b>	<b>Name</b>	<b>No.</b>	<b>Size</b>
	Great Palace	I	50x35m
	Small Palace	II	Ca. 23,5x23,5m
	Shipyards	III	Ca. 25x30m
	Bathhouse with Kiosk	VII	12,00x28,50m
	Rectangular Building	VIII	29,06x11,83m
	Western Kiosk or Kiosk with Bath	IX	Ca. 22x22m
	Bath of the Great Palace	XXXII	8,25x13,05m.

According to this table, the Great Palace (I) is by far the largest building of the complex, followed by the Shipyards (III) and finally by the Small Palace (II). The difference between the two palace buildings and the Shipyards or other large-sized structures such as the Western Kiosk with Bath (IX) can be explained with for instance the location of these. Each of the palace buildings is located on a high (or rather elevated?) platform supported by strong sea walls around eight to ten meters above the lake, as well as the lower situated plain south of them. Thus, the buildings are constructed on the elevated ground providing a beautiful panorama and enabling them to oversee everything around them. At the same time, their position at the greatest distance possible from the main gate of the complex surrounded on one or two sides with water guarantees security against possible attacks and mark their

status of importance. Moreover, these facilities were separated from other buildings of the complex by walls. The court walls seem primarily not to be constructed against external attacks or security reasons. However, they function as physical and visual separators providing seclusion and privacy. Large garden areas or courtyards around the palaces support this effect of privacy and serve as markers of wealth and power.

Despite these characteristics, these buildings were formed as typical kiosks that followed the same basic plan characterized by a central space (*soffe*) which constitutes the area for public access, for meetings and other living functions. This architectural unit was adjustable in size and form to fulfill the functions and requirements of each building. Hence, the living space was also extendable through repetitive use of the same basic unit, as mentioned before. In Kubadabad we see variations of this basic house plan to create a space for formal, official purposes such as receptions, audiences, or banquets where high ranked guests from both the Seljuk court and foreign countries had to be hosted and entertained. The Great Palace (I) exemplifies the expandability of this basic plan. (Figure 8) The ground plan of the building constitutes of two such basic that were placed next to one another. The plan is however not completely symmetrical; the plan of the additional unit (i.e. *harem*<sup>92</sup>) was rotated by 90 degrees so that a small L-formed corridor connected the two central spaces (I-e) and (I-j).

One of the adjustments was the addition of an entrance structure (i.e. vestibule) to the basic plan. The entrance part of the Great Palace (I), for instance, consisted of a hall, or vestibule (I-b), flanked by two rooms (I-a; I-c) where we might

---

<sup>92</sup> Since the second unit was only accessible through the first, Otto-Dorn recognized this second part as *harem*, the inner or private part of the building. Otto-Dorn, Bericht über die Grabung in Kobadabad 1966, 442-446.

expect to find the rooms for palace guards or waiting rooms for guests.<sup>93</sup> (Figure 8) In this regard, the vestibule is added to create additional space and that separated inner life in the building physically and visually from the outside. This effect was strengthened through a derivation of, on the one hand, the entrance structure from the axis of the central hall, and, on the other hand, the gates giving access to the central hall from the main axis in opposite directions. These precautions helped to control and restrict the access to the central hall (*soffa*), and hence, to the rest of the building.

The entrance to the Small Palace (II), in great contrast, was located at the west corner of the southern façade. (Figure 9) The access to the building was given through a vaulted iwan (II-c) which had over a gate at the back wall of this iwan. Remains of a stone bordure found on the base of the gate shows that the gate was framed with braiding motifs.<sup>94</sup> The gate opened to the vestibule (II-b) that was further extended with the addition of a square room on the north side (II-a). The addition of the iwan (II-c) on the south and the room (II-a) on the north, the vestibule (II-b) appeared as a large corridor running in the south-north axis that served as a passageway between different areas. A door on the west wall of the vestibule (II-b) opened to the central hall (II-e), a small space on the opposite side (i.e. east wall) provided space for a staircase leading to the upper floor. In this case, the entrance structure was formed by three sections aligned on the same axis, which again was placed against the main axis of the building.

---

<sup>93</sup> However, Uysal notes the existence of pipes in the northwest wall of the room (I-a) to the west of the vestibule, and concludes that this room was in used for service purpose. Uysal, Kubad Abad saray külliyesinin mimarisi, 144.

<sup>94</sup> Arık, Selçuklu sarayları ve köşkleri.

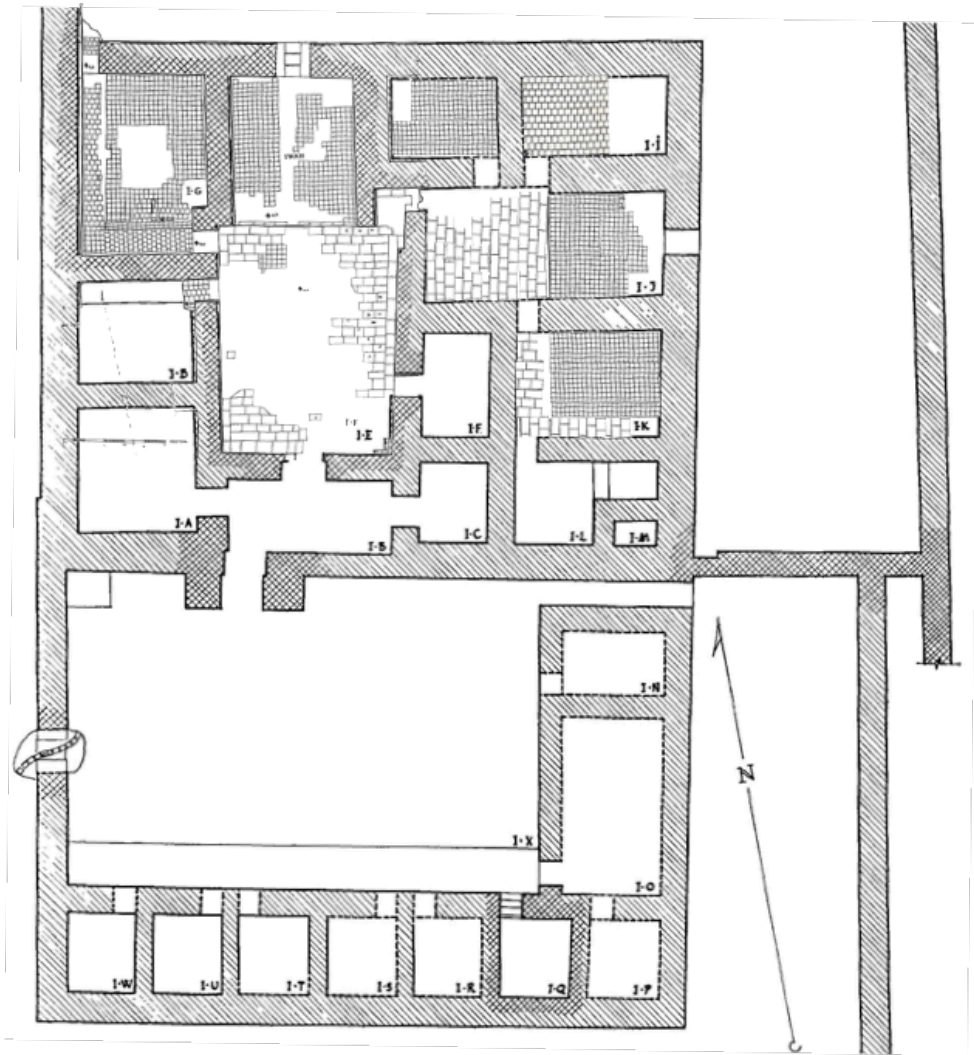

Figure 8. Plan of the Great Palace  
(Otto-Dorn 1969)

Figure 9. Ground floor plan of  
the Small Palace  
(Otto-Dorn 1969)

Another adjustment on the basic plan was the addition of an iwan to the central hall (*soffe*); this addition gave the building a direction and created an axis of movement and gaze. The placement of this new element on the opposite side of the entrance made it to the first thing to see by entering the hall. Hence, it re-defined the center of attention, the iwan was used as throne space to manifest the importance and centrality of the throne by increasing its visibility both from the in- and outside. This added a new, formal purpose central hall, which turned into a reception or audience hall. But, how was the position of the iwan, or the axis of the buildings determined?

In Kubadabad, the palace buildings were built on different axes. The Small Palace (II) is built in the west-east axis so that the iwan opens towards the lake in the eastern direction. Both the iwan and the hall are flanked symmetrically with rooms. Each iwan wall has an opening, but the openings on the northern and southern sides seem to be doorways that open to smaller rooms, or iwans (II-I, II-j).<sup>95</sup> (Figure 9)

The throne hall of the Great Palace (I-e) was extended an iwan in the northeast-southwest axis. The iwan was added to the north of the central hall, again towards the lakeside. The second (throne) iwan in the building was according to the plan of the “*harem*” section rotated by 90 degrees, however, it again was facing the lakeside. The plans clearly show each of these iwans had at least one large opening – either in form of door or a window - at its back wall facing the lake. Hence, it might

---

<sup>95</sup> The openings in the walls have been already discovered and discussed by Otto-Dorn. In the later excavations under Arık, the team has recognized that the openings on each of the iwan walls were in the same length, which does not allow any further suggestion about the former function of these as either a door or a window. In terms of the rooms flanking the iwan (II-I, II-j), Arık states that the high grade of destruction in the walls of these spaces renders it hard to imagine the former outlook and function of these. The rooms around the hall are divided into two parts by walls parallel to the western wall of the building. These walls create large nearly square-formed rooms (II-g, II-h) with direct access to the throne hall (II-e) at the same level as the threshold to the iwan, and smaller, elongated rooms (II-d, II-f) behind. These back rooms (II-d, II-f) have no direct access to the hall are only accessible through the openings in the partition. They further have shafts on the outer (northern / southern) walls. In the room (II-d) discovery of the remains of a vertical pipe within this shaft suggested that a pipe system connecting an upper level with the drainage system underneath the building. Arık, Kubad Abad: Selçuklu saray ve çinileri, 59-60.

be argued that the positions for the iwan and their openings were chosen in such a way that the lake view was visible from the inside. At the same time, one might assume that these originally were doors that provided from the throne space direct access to the private courtyards.<sup>96</sup> Concerning the fact that these iwans were placed on the only façade walls of these central halls, it might be further assumed that these openings were the main source of light in these rooms.<sup>97</sup> This meant, on the one hand, that the iwan provided a direct connection to nature outside, both visually and physically. On the other hand, it was probably the brightest area in the hall.

Furthermore, the excavation team has suggested that the ceilings of the Great Palace (I) reached up to six meters height.<sup>98</sup> The actual height of the walls and the form of the ceiling is not sure since the roof was collapsed. The team suggested based on the structure that the ceiling was probably covered with vaults. In the two-storied Small Palace, the roof and the upper floor were also destroyed. Nevertheless, the remains provide an impression of how they once might have looked like. (Figure 10)

Figure 10. North-south section from the Small Palace (Otto-Dorn 1969,490)

<sup>96</sup> Uysal, Kubad Abad saray külliyesinin mimarisi, 144.

<sup>97</sup> Since we have no clear evidence about possible openings in the upper wall zones or on the ceiling itself, we must assume that the main source of light was the sunlight coming in from the back iwan wall (thus the northern wall of the iwan). The light effect coming from the openings behind the throne –possibly blending the eyes of the audience, and the rounded forms of the iwan and ceilings evoking the idea of the heavenly sphere must have been given the sultan a glamorous and even divine appearance. As mentioned in the introduction, the palace was regarded as a physical manifestation of the power, skills, and status. The palace should amongst others impress and induce astonishment. Accordingly, these effects were part of the requirements set by the official or formal functions of palace buildings.

<sup>98</sup> Otto-Dorn, Bericht über die Grabung in Kobadabad 1966, 438.

Thus, the importance and value of the central space and the throne was not only emphasized through vertical elements such as iwan or dome but also generally through height in form of the high ceilings or platforms elevated from the ground. The floor of the iwan (I-e) was raised into a platform of thirty-five centimeters above the hall floor.<sup>99</sup> This distinguished the iwan from the reception hall and created a physical and mental distance between the ruler seated on the platform and his audience forced to look up to him. The team has recorded that the “*diwan*”-room (I-g) west of the throne room (I-e) had also an elevation in the floor that defined a large square area that reserved for meetings leaving a lower lying corridor along the southern and western walls. However, the height of this square platform from the floor has not been given in any publication. A similar room division is also given in the room (I-k) in the harem section, where a large square area is differentiated from a corridor running around it. Here, as in many others, the division of the space is not emphasized by the elevation of the floor/ a platform, but the division is rather marked through the differences in the floor covering. (Figure 8)

Two different materials seemed to be used as floor coverings; stone and brick. Although most parts of the floor were destroyed in the Small Palace, the floors of the throne iwan and reception hall (II-e) as well as the western room or iwan (II-i) were covered in brick. Uysal suggest that all rooms were covered in the same material. In contrast, outside the building (II) the paths were made of cut-stone tiles. The floors in the Great Palace (I) were more differentiated; brick seems also here to be the main material to cover room floors in both iwans (I-e and I-j), and in the rooms (I-a, I-c - I-l).<sup>100</sup>

---

<sup>99</sup> Uysal, Kubad Abad saray külliyesinin mimarisi. Arık and Arık, Tiles: treasures of Anatolian soil : tiles of the Seljuk and Beylik periods (Levent, Istanbul: Kale Group Culture Publications, 2008), 295.

<sup>100</sup> Uysal lists further areas such as in the construction of arches or window walls where this material seems to have no such representative function. Uysal, Kubad Abad saray külliyesinin mimarisi, 145.

The remaining rooms and areas such as corridors seem to be covered in cut-stone tiles. Nevertheless, the spatial differentiation in some areas is made with the same material, brick. (Figure 11) The drawings of the ground floor plans published by Otto-Dorn indicate the existence of various mudbrick forms and sizes and hence systems. The contrast was given through the application of in the remaining areas of the Great Palace including the front yard and the paths around the Small Palace.<sup>101</sup>

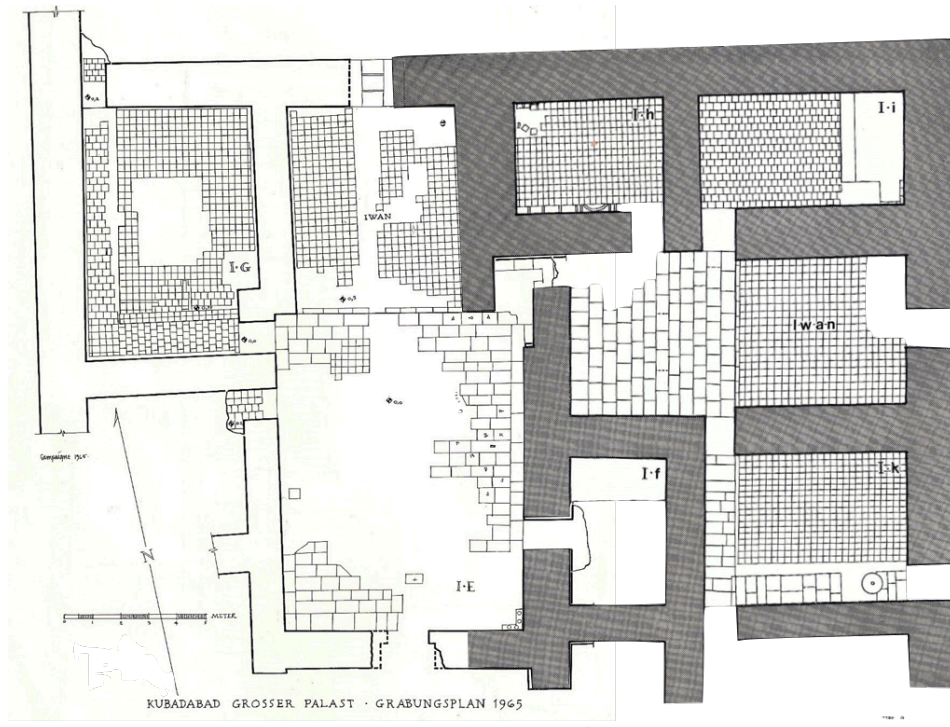

Figure 11. Combined plan showing the floor coverings of the rooms (I-e, I-g, I-h, I-i, I-j, I-k) in the Great Palace  
(right: Otto-Dorn 1965, left: from Otto-Dorn 1969)

These materials i.e. stone and brick were at the same time the main materials of construction. The walls of the palace buildings were primarily built of rubble stone, sometimes with the addition of brick fragments.<sup>102</sup> The constructions seem to be

<sup>101</sup> Arık, Kubad Abad: Selçuklu saray ve çinileri.

<sup>102</sup> The use of brick fragments for filling is seen on the southwestern façade and the northeastern wall of the vestibule of the Great Palace, as well as on the walls of some buildings located in the First Court. Uysal, Kubad Abad saray külliyesinin mimarisi, 138.

additionally stabilized by frequent wooden slabs that were put on top of brick braiding.<sup>103</sup> Wood was further used for the construction of doors, door frames and of some window frames.<sup>104</sup> The surfaces were generally covered by cut-stone tiles or blocks. In the façade walls of the palaces – i.e. all exterior walls of the Small Palace (I) and of the Maiden Castle, as well as the southern façade of the Great Palace (II) – Seljuk architects used cut stone blocks.<sup>105</sup> In the construction of wall openings, particularly arched doorways, brick was preferred.<sup>106</sup> Similarly, the vaulted ceilings are suggested to be built by this material.<sup>107</sup> In this sense, the choice of materials was primarily based on their constructive qualities of stability, endurance, and flexibility. Nevertheless, the cost of these materials and the labor required to put into their finishing were also factors that seem to be considered in their application.<sup>108</sup> As a result, the walls outside/ façade have been covered with cut stone blocks to create the image of a strong, monumental building adequate for a power and wealthy ruler.<sup>109</sup>

Apart from the materials used in the construction of the space (i.e. wood, stone, and brick), the architectural decoration of the palaces consisted of glass, tiles, and stucco. However, the findings do not always provide reliable or adequate information about the original state of the decorations in these palace buildings. For instance, the remaining fragments of materials in and outside the Small Palace - in contrast to the Great Palace (I) where in situ decorations were found - allow only

---

<sup>103</sup> Ibid. 145

<sup>104</sup> Uysal, Kubad Abad sarayı cam buluntuları üzerine genel bir değerlendirme (ibid.).

<sup>105</sup> Uysal, Kubad Abad saray külliyesinin mimarisi (ibid.), 138, 145. Uysal, Kubad Abad sarayının göldeki uzantısı: Kız Kalesi. Arık, Selçuklu sarayları ve köşkleri.

<sup>106</sup> Uysal, Kubad Abad saray külliyesinin mimarisi, 145.

<sup>107</sup> While the findings in the Great Palace primarily indicate this, some parts of the Small Palace such as the Iwan gate (V), and the ceilings of the spaces on both side of the throne iwan (II-i and II-j) seem to be built of stone ibid. 138, 145

<sup>108</sup> Wood as a cheap and available material provided a certain grade of stability and flexibility but it was not durable. Brick was very flexible in size and form and allowed different combinations but it was laborious. Stone was also available in large amounts and in various forms, but production and masonry of large cut stone blocks were much harder than building with rubble stone.

<sup>109</sup> See Winter, 384.

vague reconstructions of the program. In this respect, the following arguments will be made based on the findings primarily from different parts of the Great Palace (I) suggesting that the decorations of the Small Palace were similar.

Valuable information about the decorations in the Great Palace is particularly found in four richly decorated rooms; the iwan with the reception hall (I-e), the room denoted as “diwan” (I-g) next to it, the banquet hall with iwan (I-j) in the harem section, and the room northwest to the banquet hall (I-h). Considering the position of these spaces within the floor plan, it becomes clear how the spatial organization and decoration completed one another. It has been already discussed and shown that the central halls with annexed iwans were the main points of attention, and served not only living but also representative or formal purposes. (Figure 11)

In the iwan of the Great Palace (I-e) walls and the front of the platform were covered with colorful tiling. On the east wall of the iwan was further a one-meter-long marble block with grooves that –according to Otto-Dorn – might have belonged to a mechanism to hang a curtain.<sup>110</sup> The decoration of the walls in the reception hall (I-e) is not clear, since the archeological reports only describe what must be the inner structure of the walls, stone with stripes of brickwork beginning at two meters height and frequently built in wooden slabs.<sup>111</sup> Since no other information was given about the wall decoration in the reception hall we can only assume how they have originally looked like. In spaces - such as room (I-d) - the walls were adorned with spoliated elements commonly from Roman or Byzantine culture, which were used as cheap building materials, but also to underline messages of dominance, victory (or heritage).<sup>112</sup>

<sup>110</sup> Otto-Dorn and Önder, "Bericht über die Grabung in Kobadabad (Oktober 1965)," 173.

<sup>111</sup> Ibid.

<sup>112</sup> Otto-Dorn, Bericht über die Grabung in Kobadabad 1966., Other examples of spolia use in the Small Palace Koçyiğit, Kubad Abad ve çevresinde Roma dönemi buluntuları (Konya: Konya

It is also possible that the dados were covered with stucco niches – like the ones in the northwest room (I-h).<sup>113</sup> The fragments of stucco that were found both in situ and fallen on the floor belong to a large shelf with niches and decorations organized in different registers.<sup>114</sup> Acioğlu suggests that the stucco shelf was part of the former wall base which originally had a height of 215 cm and a depth of 32cm.<sup>115</sup> Two of these stucco niches covering a field of 91,5x83cm have been found in-situ on the southern wall of the room (I-h). (Figure 12) The single niches were formed as multifoil arches framed by three different bordures with geometric and floral ornaments.<sup>116</sup> Moreover, each spandrel was decorated with a single peacock motif.

The wall above the niches was decorated with further registers. A fragment from an upper register depicts a young beardless man with a halo riding on a horse back holding something -maybe a bird or a weapon- in his hand. He seems to hunt the animal with the long neck -maybe a dragon. The same, or at least, a similar scene seems to be repeated on the fields next to it. Between the pointed arches that frame these hunting scenes, figure of an angel with wings fills the spandrel. Above the angel a further register with inscriptions was included. However, the text was not

---

Büyükşehir Belediyesi Kültür Yayınları, 2019). <sup>113</sup> Otto-Dorn, Bericht über die Grabung in Kobadabad 1966. Although the only stucco decoration in the building was found in this room, it can be assumed that the stucco was part of the decoration and furnishing. Beside its major discovery, small fragments of this material with floral and geometric designs have been found the same room as well as next to the northern wall of the Small Palace. in Acioğlu notes that stucco decoration was also found in other Seljuk buildings such as Alaeddin Kiosk in Konya, Alanya citadel, Felekabad Palace. Acioğlu, Kubad Abad sarayı alçı buluntuları, 277-278.

<sup>114</sup> Stucco seems to be not the only decoration material in this room; the team has found pieces of turquoise tile mosaic, which they attributed to windows in the upper area of the northern wall. In addition to this, the room has a chimney on the west wall that was built of brick. Otto-Dorn, Bericht über die Grabung in Kobadabad 1966, 442, 475-479.

<sup>115</sup> Acioğlu, Kubad Abad sarayı alçı buluntuları, 278.

<sup>116</sup> The width of these bordures ranges between five and seven centimeters. The outer bordure is divided by horizontal forms between which rosettes with eight petals. The middle bordure was decorated with a twelve-pointed star motives and rosettes with twelve petals. The inner bordure shows a combination of eight-pointed stars and cross forms. Rosettes with eight petals are placed in to the star forms.

readable anymore, except the name “Muhammad” on one small fragment. (Figure 13) Based on the photo taken from the in-situ niches, it can be argued that the combination of two such scenes with the angel on top constituted a unit that was placed right on top of a niche.

Figure 12. Photo of the stucco niches found in-situ in the room (I-h)  
(Otto-Dorn 1969, 474)

Figure 13. Stucco fragment showing a hunting scene  
(Acioğlu 2019, 280)

The more probable alternative is that the walls covered to some height with tile decorations –as in the banquet hall (I-j) or in the *diwan* room (I-g). These were rooms that probably housed the meetings of courtiers and amirs; While the one – as the name banquet hall (I-j) suggests- had a more private and festive character, the room at the northwest corner (I-g) was assumed an ideal place for *diwan*, i.e. government office.<sup>117</sup> Accordingly, the decoration in these rooms were more splendid, as the in-situ findings demonstrate.

In *diwan* (I-g), the excavation team discovered three rows of in situ tiles of 2.70 meters length covering the dado of the southern wall and a small part of the western wall. These - as well as fragmented tiles found in the mound - were formed as eight-pointed stars and crosses decorated in underglaze polychrome technique.<sup>118</sup> In the banquet hall (I-j), in-situ tiles were discovered along the west wall. Two double rows of star-cross combination were found up to two meters length. In both cases the tiling followed the same scheme;

At the bottom of the dado was a row of rectangular turquoise tiles (10cm h). It was followed by at least three rows of star-cross combination in underglaze polychrome or luster technique. Above these, a narrow field - probably consisting of one or two rows- of star-cross shaped tiles (23cm h) were placed. The transition between these registers was probably marked by narrow borders of rectangular turquoise tiles (3cm h). The top register consists of square tiles (24x24cm) with

---

<sup>117</sup> First, the room is located next to the throne room, and its floor is similarly covered with bricks. Otto-Dorn and Önder, "Kubad-Abad kazıları 1965 yılı ön raporu." In regarding the high value of the *iwān* as the throne room, and restricted access to the building, this location was probably reserved for similarly important functions and powerful people. In addition to this, the organization of the space in distinguished areas further renders such a purpose quite possible. The room is divided into two functional areas; the floor of the greater part of the room is raised into a platform, which probably served as the sitting and meeting space. The remaining low-leveled part along the west and south walls forms a corridor surrounding the sitting platform and gives access to the platform as well as to the door opening to the northern terrace. (Figure 11)

<sup>118</sup> Ibid. 239pp For more details about the tiles also see: Otto-Dorn, Bericht über die Grabung in Kobadabad 1966, 448pp.

medallion decors and inscriptions. Finally, a row of rectangular turquoise tiles with 10cm height complete the tile dado. According to this, the height of the tile dado must be between 142 cm minimum (in *diwan*)<sup>119</sup> and 179 cm maximum (in banquet hall).<sup>120</sup> Hence, we can assume that the walls in some cases (here: *diwan*) covered 2/3 or even ½ of the wall size of six meters. It might be said that tile was the most dominant element of palace decoration.

Figure 14. Tile dado panel in the Great Palace (Otto-Dorn 1969, 459)

<sup>119</sup> Otto-Dorn and Önder, "Bericht über die Grabung in Kobadabad (Oktober 1965)," 181-182.

<sup>120</sup> Otto-Dorn, Bericht über die Grabung in Kobadabad 1966, 458.

In sum, the wall decoration –either in stucco or in tile- is based on the principle of horizontal division; in the example with stucco, this division is made through various types of arches in different sizes. These arches act as frames that define and organize smaller spaces. The continuous repetition (i.e. rapport) of the arch forms creates a rhythm, which changes in every register according to the size or for of the arch.<sup>121</sup> In the tile decoration, the space is divided into three parts that are separated from one another by a frame or bordure of turquoise rectangular tiles. They create fields in which star and cross forms alternate regularly. Thus, the appeal of this combination is whether the size nor the forms, but in the variety of its content. In contrast to stucco, the tiles offer bright colors, a glimmering surface, and an open-ended motif repertory.

Önder stated that the figurative richness was most remarkable feature of the Kabadabad tiles.<sup>122</sup> Among the tile findings, figural motifs belonged to the main group of tiles including various stylized animals, mythological creatures, and human beings. These figures were often depicted singly at the center of a tile on a white/blank background –i.e. without any architectural setting – and were surrounded either by entwined flowers and plants, or fields consisting of dots, or small forms. Contours following the outer form of the star-shaped tile marked further a frame in contrasting colors. Another commonality between each of these groups was their relation to topics and aspects of the courtly life and to nature. Considering the location and the function of the palace, the topic of nature became very central.

---

<sup>121</sup> Nevertheless, it is possible to see in these architectural forms the reflection of actual circumstances –here the architecture of the palace itself. Redford, "Thirteenth-century Rum Seljuq palaces and palace imagery." Accordingly, the miniature pointed arches built in stucco, for instance, could be reflections of the doorways with the same form as used in the Great Palace.

<sup>122</sup> Önder, "Selçuklu Kabad-Abad sarayı çinileri," *Selçuk Dergisi*, no. I. Alaeddin Keykubad Özel Sayısı (1988): 33. In regard of the general ban, or limitation, for the application of figural motifs to secular architecture, and the fact that tiles were very expansive as decoration materials, it must be noted that figural motifs on tiling most commonly indicated a palatial context.

Kubadabad as a summer and hunting palace in the countryside provided a multiplicity of opportunities for open-air events and sports.

Although no decoration with such hunting scenes with hunters on horseback as shown on the stucco decoration have only been discovered in Kubadabad except on coins of the Seljuk sultans.<sup>123</sup> Similar figures are also found in the context of other Seljuk palaces, such as in the Konya Kiosk, which suggests that these were royal or royal depictions. (Figure 15) On tiles, figures with weapons such as a man with bow and arrow can be related to the topic of hunting. (Figure 16)

<sup>123</sup> Uysal, Kubad Abad'da bulunan sikkeler. Ibn Bibi's narrative contains many references to hunting activities. See. Chapter 3. About Seljuk gardens, hunting and suburban kiosks see Redford, Landscape and the state in medieval Anatolia: Seljuk gardens and pavilions of Alanya, Turkey. Despite textual and architectural evidence, illustrations of horse riding rulers and hunting scenes appear in the decorations such as in Konya and Öney, "Mounted hunting scenes in Anatolian Seljuks in comparison with Iranian Seljuks," *Belleten*.

Similarly, motif of hunting might be seen also in the single depictions of all kinds of animals ranging from rabbit to bear that are inhabited in the Kubadabad or Beyşehir.<sup>124</sup> Tiles show depictions of various animals such as lions, dogs, greyhounds, panthers, foxes, wolves, wild cats, bears and birds of prey, birds, rabbits, or fishes<sup>125</sup>. However, there are some animal motifs that do not well fit into this topic or category such as domesticated farm animals such as horses, goats, camels, donkeys. Considering all these animals, the intention in the choice of the motifs seem unlikely to fit into a hunting concept, but rather a program that was meant to reflect the idyll nature of the countryside. (Figure 17)

Mythical creatures belonged also to the visual programs of hunting scenes.<sup>126</sup> In the Persian culture, mythical creatures commonly possess supernatural powers that derive from specific qualities of different animal and human beings. Simurgs and harpies are creatures with a human head and the body of a bird. Sphinxes have also a human head on a body of a lion with wings. Griffons appear with a bird's head and an animal body improved with a pair of wings. However, this list can be extended as desire, since any kind of combinations seems to be possible; the figure of an ostrich that depicts a literary combination of a camel and a bird, for instance, proves that even misunderstandings encouraged new creations.

---

<sup>124</sup> Due to this fertile nature and prosperity, a great part of the wetland has “protection statues”; designated as Lake Beyşehir and Kızıladağ National Parks. These areas provide recreation space and food to nearly hundred fifty bird species, mostly water and visitant birds, while its fresh water houses around sixteen different fish species that allow fishery and hunting. The hills and mountains on the shore offer also offer a rich fauna and chances to hunt; in the hinterlands, there are songbirds, partridges, and birds of prey such as eagles, falcons, or owls, as well as, mammals such as fox, rabbit, boar, and wolf. For more information see: Turkey Beyşehir Municipality, "Lake Beyşehir and the Islands," <http://www.beysehir.bel.tr/beysehir-golu-ve-adalar.html>.; and Turkey General Directorate of Nature Conservation and National Parks, "Kızıladağ National Park," 2016, no. <sup>125</sup> Ibn Bibi indicates that the Seljuk Sultan was “hunting by land and by sea” in his free time already during his childhood in exile. Ibn Bibi, 58.

<sup>126</sup> Öney.

Figure 17. Reconstruction of a tile panel with depictions of various animals, simurg and human figures from Great Palace in Kubadabad, Konya Karatay Museum (Arik 2019)

In other words, these figures are generated out of the existing figural repertoire, especially from those, which are regarded as powerful or virtuous. The most common mythical creatures are simurgs, harpies, sphinxes, and griffons. These creatures unite the rapidity, agility, strength, and power of predators such as lions, eagles with the ability of flight and of controlling greater territories, or the cleverness of people. These physical and mental qualities attributed to such creatures render them ambiguous; the light of their supernatural powers and virtues, mythical motives were both admired and feared.

In this sense, the motif of dragon is a good example for the ambiguity of motifs that is partly related to cultural exchange. In the light of their supernatural powers and virtues, mythical motives became relatable to hunting scenes where they were depicted as respected opponents. These creatures could further stand for any difficulties or evil that the figure might face.<sup>127</sup> Accordingly, the fight and victory against such creatures showed the skills and virtues of the opponent as good warrior, or even as a ruler. Thus, the usage of these motives became also popular in legitimizing of power in courtly and public contexts. However, meanings attributed to these figures based on their form and to the combination with further symbols. According to this, dragons could symbolize beside the fight against the evil and darkness also motion, harmony, universe, planets, zodiacs, or water.<sup>128</sup>

The concepts of universe and harmony are also represented through tree (of life) motive placed in the middle axis between pairs of birds or human.<sup>129</sup> At the same time the use of peacocks is often associated with the idea of paradise and eternal life. Paradise describes the ideal state of nature, it is a symbol of wealth and

prosperity.<sup>130</sup> Other animals, above all fishes, can be used in the similar way as the peacock to represent the prosperity and fertility. (Figure 18)

In this context, floral designs, which often appeared as accompanying motifs such as branches, leaves, twines flanking the central figure, must be seen not just as decorative room fillers, or literal devices to for natural settings, but as references to wealth and prosperity. (Figure 19) The prosperity or fertility is also reflected in motifs such as stems of grain, pomegranates, or poppies and roses held in the hands of human figures. These motifs indicate to the role of the nature as a source of life, as far as the nature is considered as a food source.

The decorative program, in this sense, might have reflected the human dependence of nature as a source. At least, some rare tile findings show the nature also as a work space for agricultural production. For instance, a tile fragment depicting a man with tools working on the fields suggesting that he was a gardener or an agricultural worker. (Figure 20) The remaining lower half of the star-shaped luster tile depicts shoreline with a trees and plants and in-between them a man holding a tool, probably a shovel, to dig in the ground.<sup>131</sup> Arık notes that the same scene has been shown in the *kitab al-diryaq* from Seljuk Iraq.<sup>132</sup> (Figure 21) Another tile with a similar topic has been found during the excavations in Keykubadiye. (Figure 22) It showed a bearded man with a shovel working on the fields.<sup>133</sup> Arık states that such genre scenes were common in the book illustrations of the Seljuks.<sup>134</sup>

Figure 22. Star-shaped tile showing a human figure working in the garden from Keykubadiye (Baş 2017)

In regard of these scenes the question raises whether these tiles illustrated the sequences of one or more stories, or whether they had a narrative quality. Epigraphic evidence found on different forms of tiles –i.e. square formed tiles for top wall registers and some star-shaped tiles with bands of inscription- have suggested that parts of literary works such as *Shahnama* were included to the decorative program.<sup>135</sup> (Figure 23)

The stories and episodes of the Book of Kings written by Ferdowsi have been reproduced, and cited in books monumental inscriptions. The surveys of remaining walls and accounts from this period have shown that along with Quran verses also of verses from *Shahnama* were cited in the wall inscriptions in cities such as Konya.<sup>136</sup> Generally, epigraphic decoration appears in many different versions on the tiles of Kubadabad Complex. There are star-shaped tiles with inscriptions as the main motif. (Figure 24) There are also rectangular epigraphic bordures, and lastly tiles in which text appears in as an addition to the figural motifs. (Figure 25, Figure 26) This last category is primarily found in the form of square tiles places on top registers of the wall panels and on star-shaped tiles with double-headed eagle motifs which are recognized as Seljuk insignia which were inscribed with mottos such as “al-sultan” commonly discovered in bath context. (Figure 25) The square tiles on the top registers, too, used the same repertory of figural motifs. A round band of inscription, in contrast, surrounded these and created a circle around the central figure and knots on each corner of the tile, like the knot patterns of the contemporary Islamic textiles. The inscriptions were written in different styles, in *kufi*, floral *kufi*, or the curved *naqshi*. Otto-Dorn has argued that these inscriptions quoted verses from *Shahnama*,

Figure 26. Fragment of a cross-shaped tile (Arik 2019, 232)

In his article on the firing process of tiles, Bozer pursued the cause of problems in the tile decoration. He noticed that the tiles were produced by hand, one by one without any templates or masks. This rendered every single piece a unique art object, but, at the same time, this meant that no tile was equal to another, neither in its form, nor in its design. However, the in situ finds revealed further problems that went beyond these small differences. Bozer named amongst other two significant types of inconsistencies; the first issue was connected to the fail productions in color and glaze of tiles. Motifs on some pieces were blurred since the colors dissolved. The second type of inconsistency addressed adjustment problems of two kinds; in regard of motifs on tiles and in regard of the cut tiles within the defined fields of decoration. The excavations brought to light some apparently unadjusted motifs, particularly figures of two headed eagles in black that were placed at the center of the turquoise glazed cross- formed tiles that were not allotted. In addition to these examples, there

were inconsistencies in the application of tiling; some star shaped tiles were not allotted either. Most importantly there were tiles, not only crosses as usual, but also star shaped tiles, which were cut after brand into pieces to be fitted into the decoration fields. It was questionable why these pieces were cut out of whole tiles instead of being produced in adequate forms, as they were required.

Bozer suggested behind these inconsistencies fail production, which was caused by the hurry in which the tiles were produced and applied on walls. He supported his suggestion with the hints given in the historical narration of Ibn Bibi that the architect Sad al-Din Kopek finished the construction works of Kubadabad in lesser time than originally expected by 'Ala' al-Din Kaykubad I. In this regard, he argued that the tile producers used some of the tiles with defaults by cutting out the defects. They did, however, cut also successful pieces into parts. The slight differences in tiles led to a derivation from the planned layout and size, so that in some cases parts of star shaped tiles, instead of cross halves built the last tile row above the border at the wall base.

A second bordure of rectangular monochrome tiles separated these luster tiles from the register of polychrome underglaze tiles, which followed the same principles of organization and composition. Otto-Dorn suggested that this register constituted of only two instead of three rows. Another alternation of the scheme is recorded at the top register, which, in contrast to the two registers below it, was formed by a single row of square tiles. These square tiles were distinguished from the star-and cross-shaped tiles not only formally, but also stylistically.

The star-shaped tiles - produced either in luster, or in polychrome underglaze techniques – were decorated with various motifs. The main group of tiles showed figural motifs; various stylized animals, mythological creatures, and human beings

were positioned centrally on a white/blank background -without any setting - surrounded either by entwined flowers and plants, or fields consisting of dots, or small forms. The square tiles on the top registers, too, used the same repertory of figural motifs. A round band of inscription, in contrast, surrounded these and created a circle around the central figure and knots on each corner of the tile, similar to the knot patterns of the contemporary Islamic textiles. The inscriptions were written in different styles, in *kufi*, floral *kufi*, or the curved *naqshi*. As the writing styles indicate, motifs and technique of the Kubadabad tiles were all attributed to the Syrian style which at the time was mainly seen on ceramic production.<sup>139</sup>

The tiles depict, as mentioned above, single figural motives, and do not tell any stories. They are designed as two-dimensional illustrations without a background or any layers that would indicate depth. Individually, they have no narrative value, but only a symbolic. The most expressive/ significant examples for such an application are tiles that were primarily found in the bathhouse on Kız Kalesi. These tiles were decorated with a two-headed eagle figure, which was centrally inscribed.

The eagle has been recognized as the King of the Birds and Air due to its size and power. Like its counterpart on earth, the lion being the King of Beasts, eagle has been a common motive in heraldry. Its derivation, two-headed eagle, as a mythical motive has been used by Byzantines, as well as, by the Rum Seljuks. The two eagles' heads looking to opposed directions united in one body was interpreted as a symbol of dominance over both East and West under one rule referring to the two-division of the Roman Empire.<sup>140</sup> The tiles in Kubadabad were further marked with one of the

---

<sup>139</sup> Redford, *Anatolian Seljuk palaces and gardens*, 236.

<sup>140</sup> Çağaptay, "On the wings of the double-headed eagle: Spolia in re and appropriation in medieval Anatolia and beyond," in *Spolia Reincarnated: Second life of spaces, materials, objects in Anatolia from Antiquity to the Ottoman period*, ed. Yalman and Jevtić (Istanbul: Koç University Publications, 2018). Peker, "The double-headed eagle."

titles given to Rum-Seljuk Sultan ‘Ala’ al-Din Kaykubad I. The Arabic inscription with the words “al-sultan al-azam” (the great sultan) in this regard marked these as Muslim or Seljuk, and dated them to the reign of this ruler.

The figure of the sultan, Seljuk courtiers and the courtly life finally is another topic that in similarity to the nature can be seen in most motifs of decoration. Despite the human faces used in different contexts, complete human figures are shown in standing, walking, and sitting positions. Particularly, sitting cross-legged figures are interpreted as royal illustrations attributed to the sultan himself. This type of seating became known in the German art historical literature as “Türkensitz”, meaning Turkish seat.<sup>141</sup> The depiction of the enthroned ruler in cross-legged position objects such as cups, tissues in his hands is a common motive that has been used in Persianate / Turkic cultures already in early Medieval times. These figures wear various headgears, long kaftans, or long baggy trousers, as well as further *tiraz* bands on their arms as a sign of their royal blood. In the context of Kubadabad, these figures are also interpreted as symbols of kingship such as cups and tissues, although some of the figures instead held flowers, pomegranates, or poppies suggesting that they were figures of lower rank, i.e. courtiers.

Some figures held musical instruments such as lutes in their hand, or writings in their hands. The figures with a lute, or writings in their hands, were suggested to depict courtly pastime activities such as music playing or hearing, and writing or reading. Also standing figures with goats in their hands, as well as hunting topic- as discussed above – belonged to this category. However, some of these figures resembled the zodiac and planet iconographies that originated from the ancient time

---

<sup>141</sup> Otto-Dorn, Das islamische Herrscherbild im frühen Mittelalter (8.-11. Jahrhundert). Otto-Dorn, Die menschliche Figurendarstellung auf den Fliesen von Kobadabad, In Memoriam Kurt Erdmann.

and became widespread in the book illustrations from the twelfth century onwards.<sup>142</sup> For instance, lute was a symbol for the planet Venus (*zuhra*).<sup>143</sup> The group of cosmological representations included also single elements such as the sun masks. Similar illustrations, especially the zodiacs have been used widespread on small objects in Seljuk context, but this topic was also used in Europe in palatial rhetoric.<sup>144</sup> Lastly, the star form of the tiles could further be interpreted in this direction. However, the cosmological references have not been studied and discussed in the literature.

## 2.4 Conclusion

This chapter presented the Seljuk palace complex of Kubadabad in the light of latest results of its long excavation history. Kubadabad was a Seljuk summer/ hunting palace in rural area which suggests that the nature or landscape around the palace was an important part of its purpose. Hence, the exterior spaces used for leisurely activities and sports such as banquets, horse riding, polo games or hunting. Therefore, the discussion of the palace and its architecture began with the description of its environment. It has been shown that the Lake Beyşehir area marked by mountains, plains and lakeside offered beyond fresh water resources and a mild climate also a great variety of building sites adequate for different purposes and activities in close neighborhood, as well as space for development of settlements.

---

<sup>142</sup> Pancaroğlu, "Socializing medicine: Illustrations of Kitab al-Diryaq," *Muqarnas* 18 (2001).

<sup>143</sup> Rice, "The seasons and the labors of the months in Islamic art," *Ars Orientalis* 1 (1954): 11.

<sup>144</sup> *Ibid.*

Thus, the area offered the idyll of the countryside combined with plenty of natural resources, and its position near trade routes and mountain passes allowed at the same time accessibility and mobility. Kubadabad was a new foundation, a new project. However, its distance to cities and strategic location further suggested that it might have been planned as a new point in the existing Seljuk networks of security, administration, caravanserais, or settlements. The castles and towers within a radius of nearly fifteen kilometers around the palace showed that the site belonged to a larger security/ military system. The ruins of the former connection road to Antalya and the location of the next caravanserai in one-day journey, i.e. around eight hours, as well as the form of the buildings suggested that Kubadabad, maybe the palace, was planned to provide accommodation to travelers. The inscriptions of the Seljuk masjid then showed that the settlement was not as big as a city (with a proper mosque), but that Kubadabad was the center of a province (*vilayet*) with the same name that was governed by a *vali*.

The discussion of the complex and its architecture further illustrated that the organization of space in different scales from “urban” to spatial followed a similar hierarchy; the spaces were organized/ arranged according to their grade of privacy, importance, and functionality. The most private and important areas were at the same time the most secure and secluded ones. The palace, and particularly the throne, being the most sacred space was the center of attention and orientation, the “mecca”.

The main elements of separation were walls, and gardens/ courtyards. The vertical and horizontal expansion in space were used to mark the significance of areas. The elevation from the ground increased the visibility, emphasized distance, and manifested superiority and power since the height gave the chance of overseeing and control of everything below. The materials were chosen to support this power

position. The palaces were given a strong and monumental appearance from the outside through stone blocks, while on the inside the walls were covered with expensive and laborious stucco panels and colorful tiles to express wealth and power.

Wealth, fertility, and abundance were reflected in the decorations showing floral and animal symbols such as pomegranate, or fish. Power similarly expressed through symbolic animals such as lions and eagles. The hierarchy and the harmony of the universe was addressed in the illustrations of sun faces, which were accompanied by many hidden symbols and iconographies of planets, and zodiacs. In addition, the decorative program recalled courtly traditions depicting elements from the (social) occasions at the court such as hunting activities or feasts. Traditions were further followed in the choice of epigraphic elements; mottos from literary works, verses from Quran and hadiths showed the Seljuk dedication to the Persianate and Islamic cultures.

Despite the different categories or contexts of interpretation, the figures and motifs of the decoration was dominated through elements from and referring to nature. Nature in form of gardens/ courtyards fully integrated to the palace, as well as the palace was adjusted to the topography and dependent on the natural resources.

## CHAPTER 3

### IBN BIBI'S PALATIAL NARRATIVES

Ibn Bibi's work *al-Awāmir al- 'Alā' iyya fī 'l-umūr al- 'Alā' iyya* covering the Rum-Seljuk history from 1092 to 1280 is the main Seljuk source, particularly for the reign of 'Ala' al-Din Kaykubad I (r.1219-1237).<sup>145</sup> The work - also known as *Seljuknama*- offers its readers primary information about 'Ala' al-Din's period including administrative concerns and deeds of the sultan. It further provides insight into the courtly life and taste at that time.

This chapter reviews Ibn Bibi's narrative in the hope of discovering overlooked details about Kubadabad and the rhetoric of palace architecture in three sections; a short introduction provides information about the author, and his patron, 'Ala' al-Din Ata Malik Juvayni (1226-1283). The following part is dedicated to the definition of the role of architecture and architectural patronage within the narrative. Ibn Bibi's use of architectural references concerning processes of patronage, his emphasis on aspects of particularly royal palace architecture, as well as terminology employed by the author will be discussed in the first line. The final part then analyzes the episode on Kubadabad with a focus on the application of rhetorical

---

<sup>145</sup> The original text has been dated to 1281/82. Unfortunately, the original manuscript of *Seljuknama* has been long lost. However, different copies and versions of the original manuscript are still available. These build the basis for the reconstruction of the original. Currently, two versions of the text are considered as a basis for various studies on Rum-Seljuk history. The first is a manuscript located in the Süleymaniye Library in Istanbul (Ayasofya 2985), also known as *mufasssal*, the full-length text. It is the earliest and longest version of all and therefore considered as the closest version to the original text. This thesis is based on the facsimile of it published in 1957. Ibn Bibi. Furthermore, this thesis made use of different Turkish translations, mostly those made by Mürsel Öztürk. Ibn Bibi, *El Evamirü'l - Ala' iyye Fi'l - Umuri'l - Ala' iyye* (Selçuk Name), trans. Öztürk, vol. 1, I. Cilt (Ankara: Kültür Bakanlığı Milli Kütüphane Basımevi, 1996), Ibn Bibi, *El Evamir 'l-ala' iyye fi'l-umuri'l-ala' iyye : Selçukname*, trans. Öztürk, II. Tercüme (Türk Tarih Kurumu, 2014). Further information about different versions and translations of the work is presented in Appendix B.

elements describing the palace. It further addresses the role of Kubadabad in the narrative.

### 3.1 Author, work, and patron

The author of the source is Husayn b. Muhammad b. Ali al-Jafari al-Rughadi, generally known as Ibn Bibi. His epithet (*nisba*) indicates that he originated from Rughad in the province of Mazandaran, Iran. According to his own statements, Ibn Bibi came from a Persian aristocratic family; his father, Majd al-Din Muhammad-i Tarjuman al-Jafari, worked as a *munshi* and translator (*tarjuman*), and his mother, Bibi Khatun to whom he owed his epithet (*nisba*) Ibn Bibi, was a skilled court astrologer and fortuneteller (*munajjima*) at the court of Khwarazmshah, Jalal al-Din Menguberti. However, his parents left the Khwarazmshah court in the face of the approaching Mongol invasion and fled to western lands. In the 1230s, the fame of Bibi Khatun's successful predictions granted the family admission to the Rum-Seljuk court.<sup>146</sup> Thanks to her successful predictions, Bibi Khatun seems to have become a respected court member under 'Ala' al-Din Kaykubad I. In contrast, Ibn Bibi's father first had to prove himself to rise in rank at the Rum Seljuk court. It seems that Majd al-Din was employed at first in an uncommon position for him as *farrash*, responsible for spreading carpets and cushions at the Rum Seljuk court.<sup>147</sup> After a while at the Rum Seljuk court, Majd al-Din was promoted and served again as *munshi* and translator. After his death in 1272, Ibn Bibi took over his father's offices.<sup>148</sup>

---

<sup>146</sup> Yildiz, "Mongol Rule In Thirteenth-Century Seljuk Anatolia."

<sup>147</sup> Yildiz has compared this position to the European chamberlain with the remark that he had probably less power. Ibid. 453 Footnote 81

<sup>148</sup> Özaydın, "Ibn Bibi" in TVD, <https://islamansiklopedisi.org.tr/ibn-bibi>

Although nothing certain is known about the date of birth of Ibn Bibi, it is assumed that he was nearly three years old when 'Ala' al-Din Kaykubad died in 1237. Thus, he was probably too young to have his own memories of the reign of the great sultan. In addition to this, Ibn Bibi was mainly bound to the court in Konya all his life, which made it for him difficult to gather information about other parts of the Seljuk realm in Anatolia. His employment at the royal chancellery, on the one hand, gave him access to legal documents, and letters (*insha'*) that provided him an insight to governmental issues. Furthermore, Ibn Bibi was an eyewitness to events and changes at the court starts, at least, from Kaykubad I's death (1237) until his own death in the 1280s.<sup>149</sup> During this long period, he witnessed the political, administrative, social, and cultural transition in the Rum Seljuk realm, especially during the Mongol sovereignty. Finally, his familiarity with court society and his employment at the Rum-Seljuk court doubtlessly provided him access to different types of sources, such as oral accounts.<sup>150</sup>

In other words, he could gather eyewitness accounts from elder court members about recent past events that were not necessarily reported in official documents. Yıldız assumes that particularly his father Majd al-Din was the main oral source for Ibn Bibi's narrative on the reign of 'Ala' al-Din Kaykubad I through his early occupation alongside the Rum-Seljuk sultan.<sup>151</sup> Ibn Bibi's dependence on eyewitness accounts had however also a limiting influence on his subject. Ibn Bibi

---

<sup>149</sup> It is believed that he completed his narrative around 1282, during the reign of Mesud II. Yıldız, "Mongol Rule In Thirteenth-Century Seljuk Anatolia."

<sup>150</sup> He further belonged to the educated elite, and as such, he had knowledge about and access to past and contemporary literary works including chronicles. We learn from the text for instance that Persian books of advice and history were part of the courtly awareness. Ibn Bibi gives an insight to the library of the Seljuk court by counting some of the most famous books of the past that were consulted by 'Ala' al-Din Kaykubad and courtiers. Ibn Bibi, *Tıpkıbasım*. Ibn Bibi's *Al-Avamir*, *'l-Ala'iye Fi'l-Umuri'l-Ala'iye* Ferdowsi's *Shahnama*; Nizam al-Mulk's, *Siyasetname*; Ata Malik Juvayni's *Tarih-i Jahangusha*.

<sup>151</sup> Yıldız, "Mongol Rule In Thirteenth-Century Seljuk Anatolia." Ibn Bibi, *Tıpkıbasım*, 454.pp

confesses in the introduction to his work his inability to provide sources and eyewitness accounts for the times before Qilich Arslan II. Although this statement might be understood as a part of his humble attitude as the author, it also is a reason for the lack of reliable information.

Moreover, the close relationship of his parents to the Sultan was probably one of the main reasons for Ibn Bibi's very positive attitude towards 'Ala' al-Din Kaykubad I. The author depicted the ruler as the greatest of all Rum-Seljuk sultans, and characterized him as an ideal Perso-Islamic ruler fulfilling nearly every of the criteria starting from his royal lineage to a good character and artistic and architectural patronage.

The influence of the family's past played also an important role in the commissioning of *al-Awamir*. Ibn Bibi worked for Shams al-Din Juvayni, who was the Mongol governor in charge of the control of Anatolia (1265). The brother of Shams al-Din, 'Ala' al-Din Ata Malik Juwayni, was the commissioner of Ibn Bibi's work. He, too, was in the service of the Mongol ruler Hulagu, and became governor of Baghdad and Mesopotamia in 1262. About his successful career, Ibn Bibi repeatedly calls 'Ala' al-Din Ata Malik a "sultan" and enlists some of the good deeds his patron made in Iraq, Khurasan and Kirman. Amongst others, Ibn Bibi praises him for various building activities, including the development of a large caravanserai network, repairing, and maintaining of past monuments such as tombs, as well as the construction of madrasas and many more. In addition to these, Ibn Bibi points to the famous historical work *Tarīkh-i Jahan-gusha* (History of the World Conqueror) written by 'Ala' al-Din Ata Malik Juvayni and emphasizes his dedication and contributions to society.<sup>152</sup> However, the relationship between Ibn Bibi and Juvayni

---

<sup>152</sup> Ibn Bibi, *Selçuk Name*, 1, 23-31.

brothers seem to have. Ibn Bibi indicates that the relation between him and his patron was based on the acquaintance of their families, who served at the Khwarazmshah court.<sup>153</sup> According to the text, the acquaintance and cooperation between their families began already with Ibn Bibi's father, who is said to have served Juvayni's grandfather and father.

In this regard, he titled his work *al-Awāmir al- 'Alā' iyya fī 'l-umūr al- 'Alā' iyya* in reference to the two great patrons in his life, both bearing the name 'Ala' al-Din. The first *Ala* in the title stood for 'Ala' al-Din Ata Malik Juwayni the commissioner and role model for Ibn Bibi and the second *Ala* was used in honor of the great Sultan 'Ala' al-Din Kaykubad I, the protector of his family and the central figure of Ibn Bibi's dynastic history.<sup>154</sup>

Ibn Bibi admired 'Ala' al-Din Ata Malik Juwayni, not just as a token of his gratitude for his patron, but as a passionate admirer of the style and quality of Juwayni's *Tarīkh-i Jahan-gusha* (History of the World Conqueror). In the introduction of the text, Ibn Bibi describes his intentions to create a high-cultural product in writing such a text, which would compete with early Persian works or with the elaborate style of famous contemporary authors.<sup>155</sup> *Tarīkh-i Jahan-gusha* was an adequate standard and model for Ibn Bibi to meet, at least to please Juwayni. Additionally, Ibn Bibi included various quotations from the Qur'an and literary works in his texts, based on which we can prove his knowledge about other works. Mürsel Öztürk, who published Turkish translations of *al-Awāmir al- 'Alā' iyya fī 'l-umūr al- 'Alā' iyya*, lists some of the cited authors he was able to identify.<sup>156</sup> The list illustrates that the chosen works were mainly in Persian and some Quranic verses in

<sup>153</sup> Ibid. 29

<sup>154</sup> Ibid. 4 Ibn Bibi, Tıpkıbasım, 11.

<sup>155</sup> Ibn Bibi, Selçuk Name, 1, 5-8. Yıldız, "Mongol Rule In Thirteenth-Century Seljuk Anatolia."

<sup>156</sup> Ibn Bibi, Selçuk Name, 1, 5-8.

the Arabic language. The addition of Arabic not only showed Islamic dedication but also his multi-lingual skills as one of the features of his milieu. The text contains references to authors of different historical periods; eleventh-century *Shahnama* by Ferdowsi, for instance, or *Khusraw u Shirin* by the twelfth-century author Nizami Ganjavi, or the thirteenth-century *Seljuknama* of Kani'i Tusi are only some prominent examples. Especially, Kani'i has been identified as one of the main sources for Ibn Bibi. The poet is known to have served several decades from 1221 onwards 'Ala' al-Din, and he has written books such as the *Seljuknama* dealing with the history of Rum Seljuk history, which might have been a major source for *al-Awamir*.<sup>157</sup>

The consulted repertoire of authors ranged not only in terms of their ages but also in geographical areas. In addition to Persian writers coming from different parts of the Persianate world that reach as far as Afghanistan, or Anatolia. Hence, Ibn Bibi's aim by referring to various authors and their works amongst others was to prove and emphasize his proficiency in Persian literature. At the same time, he became part of the cannon, which linked him and his history to the past.

The *Seljuknama* of Ibn Bibi describes the reigns of twelve Rum-Seljuk sultans from the death of Qilich Arslan II in 1192 to the beginning of the reign of Mas'ud II in 1280. The text follows the chronological order of the Rum Seljuk sultans and describes the events of their reigns including their struggle with rivals for the throne, circumstances of their dethronement or death. The focus is on

---

<sup>157</sup> Melville, The early Persian historiography of Anatolia (Wiesbaden: Harrassowitz, 2006). *Seljuknama* of Kani'i was around thirty volumes long, and contained probably significant information about the reign of 'Ala' al-Din Kaykubad I, and his predecessors. The work was probably written before 1260. However, it is only known through mentioning in later sources, since it did not survive to present day. Yıldız, "Mongol Rule In Thirteenth-Century Seljuk Anatolia," 431-432. According to Öztürk, Ibn Bibi used nearly 1400 couplets of verses of Kani'i in his work. Ibn Bibi, *Selçuk Name*, 1, 5.

administrative challenges, political and military rivalries, battles, and sieges. At the same time, the author reports the memorable deeds of the dynastic members, activities in and around the court as well as characteristics of each ruler.

Nevertheless, the reigns are not equally covered; their scope and details vary in each case. The quality of the narrative changes substantially based on the importance of each ruler, or the role Ibn Bibi gives them. ‘Ala’ al-Din Kaykubad becomes the central figure and point of reference in the Rum Seljuk history of Ibn Bibi, whom the author describes as “the greatest of all Seljuk rulers”.<sup>158</sup>

In this sense, the text is not organized according to the periods of reign, but it is subdivided into chapters dedicated to a specific episode or event. The copy of the work from Topkapı (*mufasssal*),<sup>159</sup> for instance, has a total of 151 chapters.<sup>160</sup> This structure allows the appearance of historical figures more than once (meaning in their own history) in changing perspectives and contexts so that a certain development within each becomes obvious to the readership. The figures of the rulers, for instance, occur sometimes in the role of a son, sometimes as the rival prince, and sometimes the father in the same narrative. In each case, Ibn Bibi takes a position for the actual ruler of the period, showing every ruler as an improvement to the past ones. ‘Ala’ al-Din Kaykubad represents the peak of this development.

Moreover, this structure also allows the author to vary the emphasis on certain issues, and to vary the rhythm of the narrative at the same time. For instance, the events can be described from different perspectives, or simultaneous events can

---

<sup>158</sup> Ibn Bibi, *Tıpkıbasım*, 238, Ibn Bibi, *Selçuk Name*, 1.

<sup>159</sup> See APPENDIX B to find information about the different versions of the texts.

<sup>160</sup> The originality of the chapters is questioned, but have been generally accepted as parts of the text. It seems that this idea of subdivision came not from the author Ibn Bibi. They have been added to the original text by copyists probably already in the late thirteenth century. Ibn Bibi, *Tıpkıbasım*, *ibid.* . In regard of the different versions see also the catalogue of medieval sources on the database Peacock, "The Islamisation of Anatolia, C. 1100-1500."

be discussed in different chapters equally detailed. It is further interesting that the quality of the narrative is not bound to the personal knowledge and witness of the author, as one might expect. On the contrary, as the Seljuk story advances and approaches the author's time allowing him to report events from his own experiences as an eyewitness, his narrative becomes blurry. Moreover, some of the events and anecdotes in his history seem not to follow a chronological order. The text shows further discrepancies and distortions of facts. On the one hand, the author seems to have ignored many significant events and figures. On the other hand, the author rarely gives dates of events. All these speak against the objectivity and accuracy of this text.<sup>161</sup>

‘Ala’ al-Din Kaykubad's centrality for the narrative is reflected also in the structure of the text so that the narrative of the reign of ‘Ala’ al-Din Kaykubad I at least in one-third of all chapters.<sup>162</sup> In addition to this, ‘Ala’ al-Din Kaykubad I also appears in the stories of his predecessors, so that his life story from childhood to his death nearly takes over the first half of the narrative. As a result, the work seems to consist of three parts; (1) the prehistory or background to the person of ‘Ala’ al-Din Kaykubad I, (2) ‘Ala’ al-Din’s reign, and (3) the gradual decline of the Seljuk authority in Anatolia after the Sultan's death in 1237 and the defeat of the Seljuk army at the Battle of Köseadağ in 1243.<sup>163</sup>

---

<sup>161</sup> Ibn Bibi, *Selçuk Name*, 1, 23-31.

<sup>162</sup> The reign of the Sultan is covered in 55 of 151 chapters (from chapter 36 to 90). The figure of ‘Ala’ al-Din appears additionally in 9 more chapters (i.e. chapters 4, 13, 17, 19, 22, 23, 25, 34, and 35)

<sup>163</sup> This periodization contradicts with the scholarship, which differentiates mainly four periods in the Rum Seljuk history; the origins or early years, the rise of the Rum Seljuk dynasty, the zenith of the Rum Seljuk Sultanate, the decline under the Mongol rule. It contradicts also with the initial idea of the author to create a complete history of the dynasty as his patron asked him to do. In the introduction to his work, Ibn Bibi admits that he was asked to write the Rum Seljuk history. It has been argued that it should probably become an additional chapter or book to complete Juveyni's *Tārīkh-i Jahan-gusha* (*History of the World Conqueror*). Abdülkerim Özeydin, “İbn Bîbî,” in *TDV İslâm Ansiklopedisi* (1999). As mentioned before, Ibn Bibi justifies this lack with the argument that he was unable to find adequate sources for the period before Qilich Arslan II (1071-1192).

Ibn Bibi's dynastic history, in this sense, was a kind of panegyric for 'Ala' al-Din Kaykubad I, who clearly was shown as a role model for later generations of Seljuk rulers. In other words, the work had also a didactic character in similarity to a mirror for princes such as *Siyasatnama*.<sup>164</sup> Hence, the historical narrative followed a certain agenda according to which only some parts of the Seljuk history in Anatolia - particularly political and military conflicts - were regarded as valuable to be reported. The architecture, therefore, played a secondary role in the narration as other cultural and artistic themes. The architecture mainly acted as a stage, or as a reference to the place of certain events.

Since the political concerns are brought to the foreground of the narration, royal residences (palaces), administrative buildings, or and mobile structures such as tents constitute main architectural stages. Besides these, castles, towers, and city walls, and again tents, play a significant role in the description of military events. Thus, secular architecture with administrative and military functions and caravanserais appear very frequently in the text.<sup>165</sup> The specific functions and purposes of these structures render them as ideal stages for certain occasions and events. In this regard, their role in the narration is sometimes reduced to the indication of their functions, or of directions of movement; the author uses terms (i.e. *dargah*, *bargah*, *kışlak*) to denote their function, or give their locations. For example, Ibn Bibi mentions many times that the Sultan moved for the coming winter to Antalya, or to Alanya meaning not directly the cities, but royal residences built to spend the winter period, which he denotes in other passages as *kışlak*.<sup>166</sup>

<sup>164</sup> Nizam al-Mulk, *The book of government, or, Rules for kings : the Siyasat-nama or Siyar al-muluk of Nizam al-mulk*, trans. Darke (London: Routledge & K. Paul, 1960). See on this issue also Redford, Just landscape in medieval Anatolia.

<sup>165</sup> In contrast to them, religious buildings such as mosques and madrasas, or public buildings such as baths are barely mentioned.

<sup>166</sup> Ibn Bibi, *Tıpkıbasım*, 251, 300, 344.

### 3.2 Architecture, warfare, and patronage

Beyond its role as a stage of events, architecture is also shown as subject to royal patronage. In the secondary literature, 'Ala' al-Din is known as probably one of the greatest patrons of architecture in Seljuk Anatolia.<sup>167</sup> In the narrative, in contrast, Ibn Bibi mentions only palaces and military structures such as walls and castles. The narrations of these patronized projects might not appear to be helpful in the discussion of palaces, however, they provide valuable insights to the processes behind organization and construction of royal projects. Furthermore, they offer details about expectations of the Patron, and examples to compare and identify common principles of design of the buildings, as well as the way they were described by the author.

After the enthronement ceremonies and celebrations, one of 'Ala' al-Din's first deeds was to conquer the castle of Kalonoros (and Alara); Kalonoros "like a rose with thorns"<sup>168</sup> appears to be an attractive target providing access to the Mediterranean trade but with mountains giving no passage and walls from granite stone is difficult to take.<sup>169</sup> Ibn Bibi reports that the sultan suggested building a castle on the strong rocks of Kalonoros to thank and honor God, who supported Seljuks. Furthermore, the plans of the castle should stun God, make the difference between rulers' deeds visible for other nations, and lastly, show them Seljuk capabilities. He continues, "with its grandeur, it should compete with the heavenly circle, or with the palace with twelve gates." Following the order of the Sultan, master builders,

---

<sup>167</sup> It is reported that nearly 300 caravanserais have been built during his reign. He is further known to have patronized masjids, mosques (e.g. Alaeddin Mosque, Konya). See for more information Yalman.

<sup>168</sup> Ibn Bibi, *Tıpkıbasım*, 236.

<sup>169</sup> Ibn Bibi remarks that the area was not paradisiac as Antalya, but the promise of "taking great taxes from the Egyptians" was the actual allure for the Seljuk sultan. *Ibid.* 255

workers, and painters came together and build in a short period the edifice on the rocky hill.<sup>170</sup>

The conquest of Kalonoros in 1221 is one of the most important events for 'Ala' al-Din's legitimacy. In this context, Ibn Bibi shows some of the strategic methods, by using which Sultan 'Ala' al-Din ensured and showed his success. First, the Sultan completes the conquest of this important spot by the reconstruction of the castle according to the needs and wishes of a "Seljuk style", and by giving his own name to a place referred in the contemporary sources as an imperial and unconquerable castle. The new name of the castle and the city Alaiyya (Alanya), provide evidence for 'Ala' al-Din's orientation towards the tradition of legendary rulers such as Alexander the Great or the Roman Emperor Constantine the Great and his adoption of their methods. Secondly, he sent the former administrator Kyr Vart into exile after taking all his property away. Afterward, he showed his justice and benevolence in offering him *iqtas* (fiefs) near Akşehir and obliged him to loyalty. This helped him in two ways, the confiscation of Kyr Vart's goods and his withdrawal from his duties, eliminated him as a rival. At the same time, putting him in charge of *iqtas*, was a method to use his knowledge and skills for the wealth of the Seljuk lands.<sup>171</sup>

At the same time, the narration about the Seljuk castle illustrate the rhetorical functions of the patronized architecture. The dedication of the structure to God as a thank for his support as transmitted by Ibn Bibi provides a pious image of the Sultan, who enjoys the divine support.<sup>172</sup> Nonetheless, the requirements for the new structure

---

<sup>170</sup> Ibid. 267

<sup>171</sup> Finally, the arrangement of marriages to important families guaranteed support and sympathy of these people, and increased the power of the Seljuk Sultanate. The daughter of Kyr Vart is identified as Mahperi or Huand Khatun, the mother of the future Sultan Ghiyath al-Din II. Shukurov.

<sup>172</sup> Ibn Bibi emphasizes this aspect of the Sultan in various parts of the narration, through the mentioning of Sultan's regular payers, or the close relation to the Abbasid Caliphate. Ibn Bibi,

imposed by the Sultan shows that the building was not meant to reflect piety, but to stand out, impress and astonish the people as well as God with its grandeur comparable to heavenly circle.

The construction story of the city walls in Konya draws a similar image of the requirements, and functions of patronized architectural projects. Ibn Bibi reports that the Seljuk capital Konya was a city with a great population and wealth so that it extended over an area of a one-day trip. After his return to Konya, Sultan went on a walk around the city with the court's amirs (*umera i dargah*) and the servants to visit the surrounding gardens by vineyards and fruit trees. Ibn Bibi reports that Kaykubad noticed while looking at it that Konya looked like an “unadorned sword”.<sup>173</sup> He thought about all the people who came from all over the world to live here detached from the dangers of the time. Consequently, he ordered a wall to be built around it and Sivas.<sup>174</sup>

On his order, skilled architects and master painters were brought to him. Then, Sultan hopped on his horse and he circled around the city with his entourage and architects without wasting any more time. These draw his command the places of towers, walls, and gates. Sultan listened carefully to their ideas and thought about them. Finally, he corrected some of the placements.<sup>175</sup> As the locations of the towers and walls were defined, sultan called his private assistants (*nuvvab-i has*) and ordered that the costs of the body, four of the gates (*darvazah*) and some towers to be

---

Tıpkıbasım, 227, 243, 267, 285, 286, 316, 400, 405-408. Remaining Seljuk inscriptions, as much as the titles granted by the Caliphate emphasize the commitment of the Sultan to Islam and evoke the idea of Ghaza. Yalman remarks that the Qur'anic quote - Victory from God and conquest is near" (*nasr min Allah wafath qarlb*) (61:13) - inscribed on the arsenal (Tophane) tower in Alanya was among others a significant example of the use of the Holy War (*ghaza*) rhetoric with the "infidels" (Armenians, Byzantines, Crusaders) at that time, which was one of the Muslim policies to differentiate and legitimize one's kingship. Yalman, 46.

<sup>173</sup> Ibn Bibi, Tıpkıbasım, 253.

<sup>174</sup> Ibid. 254-257

<sup>175</sup> Ibid. 253, 272

paid from the private treasury (*hazina i hassa*). The amirs should pay the cost of the remaining parts according to their level of wealth and income. He further added that in appreciation for this given opportunity, they should do this rash. The same was ordered per messenger to be done in Sivas.

The construction works began after a short while and continued day and night. The artisans created relief paintings and sculptures on the silvery rocks and on soft stones and marble, they inscribed in gold glitter verses from the Quran, some of the most famous hadiths of the prophet and verses and mottos from the Shahnama, until no free space was left over. With the help of god and the luck of the sultanate, Ibn Bibi reports, they managed to finish the construction works after a while. Sultan visited the walls liked what he saw. As a thank to the engagement, he ordered to inscribe on the stone walls the names of all involved parties.<sup>176</sup> These narrations, on the one hand, show the direct relationship between patronage of castles and city walls and victories of the Seljuk armies. They indicate that the costs were, at least partly covered through booties. In addition, these examples show how the process of patronage was organized and financed in Seljuk Anatolia. It is an example how the major works were organized, delegated, and distributed in the ruling hierarchy during the reign of Kaykubad I. The fact that the same, or at least a similar construction and decoration program was ordered to be realized in Sivas shows that such projects were to a great degree standardized.<sup>177</sup>

In sum, architectural patronage during the reign of Sultan Kaykubad I is mainly limited to security structures such as walls and castles. The patronage might be linked to various factors or reasons. successful outcomes of the military event - as in the conquest of Kalonoros - result in enlargement of the boundaries with the

---

<sup>176</sup> Ibid. 253

<sup>177</sup> Redford, City building in Seljuq Rum, 5.

addition of new cities or territories, and financial gains in the form of booty. Although spatial, financial, and demographic growth contributes to the Sultanate's stabilization and rise of power, it generally created new requirements for the extension of security system, infrastructure including routes, water, and food supplies and construction of public structures for health and education. Fortifications and other patronized building projects help at the same time to commemorate these victories, as well as to propagate and legitimize the newly won power.<sup>178</sup> In the absence of contemporary descriptions, the illustrations of the city walls in Konya from the nineteenth century show that they too were meant to serve as prestige objects (Figure 27); the figural, and epigraphic decorations of these walls clearly prove that they represented the Seljuk power and ideology to the visitors.<sup>179</sup> Their outlook meant to impress the viewer with monumentality and with the beauty of its artistic design. Ibn Bibi's comparison of the city without walls to "an unadorned sword"<sup>180</sup> indicate this additional purpose of such structures.

Figure 27. City walls of Konya by Leon de la Borde<sup>181</sup>

<sup>178</sup> Particularly Scott Redford has written many articles concerning the urban design in Seljuk Anatolia, indicating that the existing structures such as walls and fortifications served often as a basis for the construction projects. These were also important objects for the discussion of the Seljuk relation to the Anatolian past and spolia. Ibid. 3 Redford, "The Seljuqs of Rum and the Antique," 148-156.

### 3.3 Government, palaces, and ceremonies

The residential and administrative buildings for the Sultan and members of the ruling elites seem to be patronized for similar reasons; although the standardization of the organization processes and visual vocabulary indicators of the changing nature of the gradually growing and centralizing Sultanate, the expansion of the Seljuk realm required a less (or non-) centralized system of administration.<sup>182</sup> This was also recognizable in the architecture of the new palatial projects.

Ibn Bibi's narrative indicates that the Rum-Seljuk sultans and their courts have been continuously on the move within their realms and they attended also campaigns and travels to neighbor lands. Thus, despite the centralization of the rule, the Sultan with his entourage was on the move, and remained in the peripheries of the Sultanate. In other words, the sultan ruled not from one center such as the capital city, but the center of power moved from place to place with the person of the sultan. This practice led to the formation of different ephemeral centers. In this governmental system, ruler was considered as the center of the state, while architecture took only a secondary role. Despite their reduced role, palaces and other administrative structures remained still a crucial part of the administrative process. However, there was no more one single capital city, one main royal residence, or one major palace, but there were many.

In general, royal, or palatial buildings and complexes are amongst the main group of buildings mentioned in the narrative. First, not only because of their role as

---

4406274@1531570678593/Konya-view-of-the-city-walls-Leon-de-Laborde-Voyage-de-lAsie-Mineure-Paris-Firmin.png

<sup>182</sup> The same problems were seen in the Roman Empire; the control of the vast extend of the Roman world required multiple administrative centers with adequate seats for the rulers. One of the most famous examples of such power centers was Diocletian's Palace in Split, Croatia that was built for the Roman emperor Diocletian at the turn of the fourth century. See Curčić, "Late-Antique palaces: The meaning of urban context," *Ars Orientalis* 23 no. Pre-Modern Islamic Palaces (1993).

centers of power in a historical narrative with emphasis on political and military events, but also because of their multiple and nuanced functions. Nevertheless, their role for the Seljuk history is limited to their function as functional spaces, or stages of action owned by the Sultan. In Ibn Bibi's narrative palaces are no thrones, seats, or centers of power from which everything is controlled, this role is taken over by the sultan. The following descriptions do not describe palaces: "refuge of world" (*jahan-panah*)<sup>183</sup> or as the "orientation point of nations of the world (*qibla-i khilaq-i afaq*), the source of state and welfare, the place of prosperity and greatness"(*ja-i iqbal wa rif'at*).<sup>184</sup> These rather spatial denotations are attributions for the person of sultan, emphasizing the value the person of the ruler takes in the (court) society. This is how the idea "power/throne is there, where the ruler is" manifests itself in the Seljuk thought. The sultan is in the (new/renewed) Seljuk state the throne, the centers of power or points of orientation.

In the light of various medieval sources, scholars could identify nearly thirty bigger or smaller palaces which seem to have been built, or more generally, to have existed under the Seljuk authority on various locations of Anatolia.<sup>185</sup> According to Merçil, more than half of these structures were built under the direct patronage of the ruler, while the others were commissioned and built for members of the dynasty such as princes or wives of sultan. Unfortunately, the evidences are in many cases limited to no more than one or two references in the written sources, and for most of these "palace" structures there exists no physical evidences either; whether for their sites, nor for what they might have looked like.<sup>186</sup>

---

<sup>183</sup> Ibn Bibi, Tıpkıbasım, 238. "The victory kissed the ground in front of Sultan's *dargah* which is shelter of world to proclaimed its subjectivity."

<sup>184</sup> Ibid. 366 The author hereby describes the palace in Kayseri.

<sup>185</sup> Merçil, Selçuklularda saraylar ve saray teşkilatı (Bilge Kültür Sanat, 2011).

<sup>186</sup> Ibid. 17-49

Ibn Bibi names only a handful of “palaces” in Seljuk Anatolia; Keykubadiye or Kubadiya Complex near Kayseri<sup>187</sup>, the palace Ibn Bibi refers often as *dawlatkhana* in the city of Kayseri<sup>188</sup>, Kubadabad Complex near Beyşehir<sup>189</sup>, Filobad near Konya<sup>190</sup> are the only ones that are mentioned by their specific names. Nevertheless, the text provides further places with at least one such palace structure; the palaces in the capital Konya<sup>191</sup>, and other major cities such as Ankara, Kayseri, Malatya, Sivas, Antalya, and Alanya. The textual references indicate that these palaces not only were spread throughout the different part and geographies of the Seljuk Anatolia, but they also served various functions indicated by the terminology applied to them.

For instance, the term *dawlatkhana* is only used to denote the palatial building at the city center, for instance in Kayseri, primarily used for governmental, or administrative purposes.<sup>192</sup> The text indicates that it serves as a stage for important political decisions and acts. The *dawlatkhana* in Kayseri appears in the narrative mainly as the place for severe decisions or unpleasant events. It is above all, ‘Ala’ al-Din Kaykubad I's place of death in 1237, and the place where people of highest ranks, such as amirs are punished by death.<sup>193</sup> However, Peacock and Yıldız draw attention to the fact that *dawlatkhana* was the place of “official enthronements and other such public-oriented activities” including spaces for drinking *majlis*, or symposia.<sup>194</sup>

Although, details about its actual form and outlook of this special structure remains unclear, it can be assumed based on the case of punishment that the

<sup>187</sup> Ibn Bibi, Tıpkıbasım, 354,355,367.

<sup>188</sup> Ibid. 212,256,283,289,293,300,301,344,352,356,364,366,371,385,415,425,426

<sup>189</sup> Ibid. 352-356,358, 361

<sup>190</sup> Ibid. 690,692

<sup>191</sup> It is today known under the names of Konya, Aladdin or Qilich Arslan II Kiosk.

<sup>192</sup> Eravşar, "Anadolu Selçukluları'nda idari mekan olarak devlethane" (paper presented at the I. Uluslararası Selçuklu kültür ve medeniyeti kongresi, Konya, 2001). Eravşar, Ortaçağ Anadolu kentleri (Yeni Türkiye Yayınları, 2002), 339-340.

<sup>193</sup> Ibn Bibi, Tıpkıbasım. Like *dadgah*, a *devlethane* might have existed as single building in the capital city of Konya.

<sup>194</sup> Peacock and Yıldız, Introduction (London, New York: I.B. Tauris, 2013), 12-16.

*dawlatkhana* type incorporated also jurisdictional functions. In this sense, it would partly correspond to the Persian term *dadgah* (place of justice) as used by Ibn Bibi. Since *dadgah* appears rarely, it remains questionable whether it can be described as a single room, or an independent building as in case of the Arabic term *Dar al-Adl* (court of justice).<sup>195</sup>

The term *dargah* seems further to have an administrative character parallel to *dawlatkhana*. Ibn Bibi uses *dargah* as a generic term to denote the palace both as a physical and conceptual entity. For instance, the term is used equal to the word court to describe “courtly orders” (*hokm-i dargah*).<sup>196</sup> Nevertheless, *dargah* appears in other contexts and forms, too. In one chapter, Ibn Bibi describes the daily rituals of the sultan ‘Ala’ al-Din Kaykubad I and mentions that the Sultan amongst other prayed in the “court of God” (*dargah-*). Despite these rather rare usages, *dargah* describes the palace in the capital of Konya, or the throne room in the palatial buildings. Ibn Bibi refers to the palace in Konya as imperial palace (*dargah-e saltanat*), which can be translated as “court” or also “throne of the Sultanate”.<sup>197</sup> The term *dargah* is also used as a distinguishing title for higher courtly ranks.<sup>198</sup>

In contrast to the two former terms, the term *bargah* appears very frequently in the text, but remains with its versatile character still difficult to define. The Persian word *bar* means assembly, or tribunal. In this regard, the term *bargah* is generally translated as meeting room, where high ranked officials of the court, or special guest

---

<sup>195</sup> The term is, for instance, used in the case of some tradesmen, who came to *dadgah* to complain about the trouble caused by foreign authorities in Antalya, and to ask for sultan Ghiyath al-Din Kayhusraw’s help. Consequently, Sultan sieged and took Antalya. Ibn Bibi, *Tıpkıbasım*, 95, 301.

<sup>196</sup> Ibid. 166, 224 The term appears also singly to denote the court/ palace in a more general context. Ibid. 234, 248, 275 However, the author also describes the throne room decorated with an *iwan* with the same term. Ibid. 201, 203, 233

<sup>198</sup> Redford, *City building in Seljuq Rum*, 6. Peacock, *The dargah: Courts and court life*, 156-188. Peacock and Yıldız, 38.

can meet and speak to the sultan.<sup>199</sup> The word expresses in some cases the presence or audience of ruler. In this sense, it is like the term *soffe-i bar* that also denotes a meeting place. The descriptions do not clearly inform about the size. Hence, *soffe-i bar* can refer to reception (or throne) hall, where public audiences, dinners, and festivities were occasionally held.<sup>200</sup> On the other hand, it might denote a meeting hall (*diwan*), since Rum Seljuk ministers (*amir*) and members of the ruling elite held the meetings in these spaces.<sup>201</sup>

The word *bargah* appears also in suburban or rural contexts; in encampments, for instance, the term can be used interchangeably with *otag* as a place, or a tent reserved for meetings, or a *karargah* where decisions were made for military or administrative issues.<sup>202</sup> In this sense, *bargah* appears to have a residential character in comparison to other palatial terms *dawlatkhana*, and *dargah*. However, Ibn Bibi denotes the Keykubadiye palace using all three terms - *bargah*, *dargah* and *dawlatkhana* - while *dawlatkhana* appears to be part of the *bargah*.<sup>203</sup> Such examples show that *bargah* designated a multifunctional building serving governmental as well as residential and leisurely purposes.

These three terms *dawlatkhana*, *dargah*, and *bargah*, are amongst most frequently words Ibn Bibi uses to designate palatial structures or complexes.<sup>204</sup> These appear in the text to fulfill different functions of a palace. As an additional difficulty, they occur under different names and circumstances, which renders the distinction of

---

<sup>199</sup>Steingass, "Bar," in A Comprehensive Persian-English dictionary, including the Arabic words and phrases to be met with in Persian literature (London: Routledge & K. Paul, 1892).

<sup>200</sup> According to Ibn Bibi public audiences (*bar-i am*) were scheduled regularly, in which people could present their concerns to the Sultan and held solutions to their problems. Ibn Bibi, *Tıpkıbasım*, 227, .

<sup>201</sup> The term *diwan* by Ibn Bibi describes a group of people consisting of highest officials of the court, amirs. Thus, it can both refer to a concept or a room. Ibid.

<sup>202</sup> Some examples for the application of *bargah* as a synonym for a room or tent are present in Ibn Bibi; *ibid.* 218-220, 270, 280, 283

<sup>203</sup> For the terms *bargah* and *dawlatkhana* *ibid.* 265, 267

<sup>204</sup> It should be stated that the Persian words for palace *saray*, *kakh* does not appear in the original version of the *al-Awamir* as frequent as it is used in all translated versions of the text.

nuances between palatial terms very difficult. Moreover, it seems that some these terms were used interchangeably, so that they must have been already ambiguous in the thirteenth century.<sup>205</sup>

Nevertheless, the close survey on such terms shows different aspects of palaces, above all, their main functions in the Seljuk Sultanate, according to which their layout and appearance were planned. Thus, the nuances in the designation of such facilities indicated the variability of their architecture, as well as their rank and prestige in Seljuk Anatolia. The common feature of these palaces was that they were all considered as seats or throne (*takht*) of the Seljuk ruler, and acted in the presence of the Sultan as centers of power and government.<sup>206</sup> The term throne (*takht*), the seat of the ruler, denoted in broadened sense as a space, where the sultan held meetings, received guests, or made decisions (*bargah*). In palace buildings, the seat was placed in an iwan. In Seljuk palaces, the throne was often placed in an iwan as an extension of the reception hall.<sup>207</sup>

The place of the throne was emphasized and distinguished from the rest of the space not only by a higher leveled, but also luxuriously covered floor that was commonly decorated –like the three walls of a domed iwan with colorful and

---

<sup>205</sup> Similar problems of the architectural terminology have been addressed in many studies on the medieval Islamic architecture. See Northedge on Samarra Northedge, "An interpretation of the palace of the caliph at Samarra (Dar al-Khilafa or Jawsaq al-Khaqani)," *Ars Orientalis* 23, no. Pre-Modern Islamic Palaces (1993). Northedge, *Palaces of the Abbasids at Samarra* (Oxford: Oxford University Press, 2001). and Anderson on Umayyad Palaces in Cordoba Anderson, "Islamic spaces and diplomacy in Constantinople (tenth to thirteenth centuries C.E.)," *Medieval Encounters* 15, no. 1 (2009). Anderson, *Villa (munya) architecture in Umayyad Cordoba: preliminary considerations*. Anderson, *The Islamic villa in early medieval Iberia: Architecture and court culture in Umayyad Cordoba*.

<sup>206</sup> Ibn Bibi mentioned the throne commonly as an insignia of Sultan's power, calling the ruler possessor of the throne and the crown. Ibn Bibi, *Tipkibasim*, 210, 211, 236, 238, 252, 280. In addition to this it seems that in every palace he owed an actual throne to present the status and power of the ruler. *Ibid.* 236, 251, 255, 393, 418

<sup>207</sup> *Ibid.* 258

figurative high-quality tiles<sup>208</sup>. The throne room was, last but not least, visually separated from the rest by a long curtain. The curtain was used already in early Iran as part of a court ceremony, according to which the curtains remained close to emphasize the absence of the ruler on throne. On special occasions, in which a larger group of people were in the reception hall the sultan took seat on his throne and the curtains opened dramatically to show his countenance to the audience.<sup>209</sup>

Daily rituals of the sultan and of the court, as well as the ceremonies held at the court, as indicated above, determined the needs of the space in palace architecture. The main functions of government, control, and representation, for instance were incorporated in the throne room or hall. In Ibn Bibi's text, we find descriptions of different occasions and ceremonies, which could have taken place in such a place. Above all, it seems very possible that in the presence of the sultan audiences were held regularly in this hall. These audiences were held in relation to governmental issues, as well as in relation to the problems of the local subjects. They were held either in courthouse (*dadgah*), or in a meeting hall/room (*soffe-i bar* and/or *bargah*). According to Ibn Bibi

“during his reign, Sultan sat everyday on his (state) throne in the meeting hall (*soffa-i bar*), listened to orators/ complainants to understand their problems and closed cases by adjudging in the presence of *qadis* and imams. From his reign [Ghiyath al-Din Kayhusrav I] until the half of the reign of ‘Ala’ al-Din [Kaykubad I] Rum rulers did fast precisely on Mondays and Thursdays. The rulers appeared in the courthouse (*dadgah*) in person, and gave justice to the oppressed.”<sup>210</sup>

These quotations about the reign of Ghiyath al-Din Kayhusrav I, the father of ‘Ala’ al-Din, show that public meetings were an important part of the daily schedule of the

---

<sup>208</sup> See archaeological results in Palace architecture and decoration 46. Ibn Bibi further mentioned while describing the palace in Keykubadiye, for instance, that the throne was in an iwan, where the sultan used to sit on “public” events. Ibid. 239, 255, 258

<sup>209</sup> References to such ceremonies are given in ibid. 206, 233, 280

<sup>210</sup> Ibid. 93

Rum- Seljuk rulers. Bringing justice to subjects and being able to listen to others were among the important qualities of an ideal ruler, as Ibn Bibi also emphasized in his narration. It was a tradition, or even a duty of the sultan to listen to people's concerns and ideas that continued during the reign of 'Ala' al-Din Kaykubad I.<sup>211</sup>

However, these public events were only a part of the administrative load of the ruler. Meetings and audiences were held also in smaller frame; the palace housed often private meetings with important guests from the ruling elites and high-ranked officials such as amirs, beys, religious scholars, and artisans, as well as foreign rulers and ambassadors. For instance, the author reports that the court organized many feasts (*bazm*) in honor of important guests such as ambassadors.<sup>212</sup>

The visit of the caliphal ambassador Ibn al-Jawzi, gives many details about the course of such receptions. Ibn Bibi reports that the Sultan heard the news about the arrival of caliphal ambassador Ibn al-Jawzi in Malatya, as he moved to Kayseri after the completion of the walls in Konya. Kaykubad sent then the high ranked officials to receive the ambassador in Sivas, followed them with the imperial parasol (*chatr*), and welcomed the ambassador in a ceremony.<sup>213</sup> Ibn al-Jawzi was brought from here to the room (*visak*) reserved for him in Kayseri, while the Sultan returned to the royal palace (*dargah-i saltanat*). On the next day, the ambassador was invited to meet the Sultan at the palace. Ibn Bibi describes that

Sultan sat in the royal palace (*bargah-i saltanat*) on the four-cushioned throne (*chahar balish-i jahanbani*) like Suleiman flanked by amirs on his left and right side, who stand in their places according to their ranks. The Sultan stood up when the ambassador went over the threshold, and officials ran over to

---

<sup>211</sup> Beside this general information about such public audiences, Ibn Bibi also reports about actual cases that were presented to the ruler during these audiences. The importance of these public occasions is shown in the case of three tradesmen, who according to Ibn Bibi complaint about the unjust treatment of the Cilician Armenian ruler Leon. Consequently, Kaykubad decided to organize a military campaign against King Leon. Ibid. 301 Peacock, "The Saljuq campaign against the Crimea and the expansionist policy of the early reign of 'Ala' Al-Din Kayqubad " Journal Royal Asiatic Studies (2006): 93.

<sup>212</sup> Ibn Bibi, Tıpkıbasım, 265, 267, 270, 281, 284, 293, 298, 300, 310, 313, 330, 354, 375, 382, 408.

<sup>213</sup> Ibid. 233, 386, 408, 412

welcome him. Then, they took his hand and seated him on a stool (*kursi*) in front of the throne. The caliphal gift packages (*buhcha*) were lined (by *bohchedaran-i dar al hilafa*) on the sides of the hall, and sultan's servants (farrashan- i sultan) took down the colorful curtain from the ceiling. Kaykubad descended from his throne and kissed his rikab that was sent from the caliph, put on the robe of honor, the cloak, and the black sharbush. The ambassador took him by the hand and sat him to his throne, while the servants took away the curtain, and others brought vessels full of valuable jewels ...<sup>214</sup>

This passage shows the procession of a ceremony held for caliphal ambassadors. It is important to note that the throne is placed in a hall, allowing courtiers and servants to be present during the ceremony. The ceremonies are strictly regulated, so that the place of every participant is clearly pre-determined. The sultan is hidden behind a curtain and becomes visible. The curtain was used already in early Iran as part of a court ceremony, according to which the curtains remained close to emphasize the absence of the ruler on throne. On special occasions, in which a larger group of people were in the reception hall the sultan took seat on his throne and the curtains opened dramatically to show his countenance to the audience.<sup>215</sup>

The curtain ceremony appears to be a highly recurrent rhetorical image in Ibn Bibi's historical narrative. The end of the two months long siege of Kalonoros, the Seljuk victory comes in form of following cosmic metaphors:

On the next day, the sun, king of stars and sultan of planets, put his head out behind the blue curtain (sky) and at the same time, the ears of the earth and time blew from the voice of nay and the drum of the state toned victory by every drip. The victory kissed the earth in front of sultan's shelter of the world and proclaimed his subjection to him.<sup>216</sup>

After a dream that proclaimed the upcoming victory to Ala al-Din, Ibn Bibi describes the rise of the new day in great analogy to the curtain ceremony of the Sultan. The sun representing the Seljuk Sultan Ala al-Din Kaykubad, rises and shows itself in the blue sky in the manner the Sultan shows his face to his subjects. Such metaphors

---

<sup>214</sup> Ibid. 257 This passage has been translated freely by the author.

<sup>215</sup> Ibid. 258, 309, 335, 350

<sup>216</sup> Ibid. 237-238 This passage has been translated freely by the author.

show that the Seljuk court hierarchy and ceremonies have pendants in nature.

Ibn Bibi uses nature to describe the course of military events, in which the sun as the king of planets either represents the sultan or the Seljuk army and state. In one episode, the sultan sends his army (1226) under the command of Amir Çavli towards the castles Kahta, Hisn-Mansur (Adıyaman) and Çemisgezdek as the Artuqid ruler of Diyarbakir, Mas'ud, chooses Egyptian Ayyubid ruler al-Malik al-Kamil (1218-1238) as his overlord, instead of Kaykubād I. Ibn Bibi visualizes the severity of the Artuqid defeat against the Seljuk army in an architectural analogy; he writes that in the encampments of the rivals "all tents ( ) fell, their ropes and posts broke". In the light of these bad signs and developments, the inhabitants of the castle decide to surrender. The author gives here again a foretaste to the upcoming victory through cosmologic metaphors:

On the next day, as the flag of the king of the planets (of the sun) was visible in the turning castle of heavens (the sky) the members of the army pulled the black flag of the sultan to top of the castle with the help of God.<sup>217</sup>

The sun again represents the Sultan, and foreshadows the Seljuk victory by appearing in the sky over the surrendering castle like the black banner of the Sultan. The nature plays a huge role in the description of the palaces.

As the troops start their journey, Sultan rides with his men to Keykubadiye. Ibn Bibi states the place the Sultan went was "as if God had created the place to show people how paradise looks like". The site "resembles in beauty the spring of the spring time" with mild temperatures, odors, and greenery. Hence, environment of Keykubadiye appears in the manner of paradise; the references particularly to the wind, odors, and colors evoke the beauty of this place that seems to be house the source of life. Recreation in the nature is surely linked to the general purpose of such

---

<sup>217</sup> Ibid. 281

suburban palaces. Ibn Bibi further describes the palace complex;

there was such a palace, both sun and the moon turned to it  
at that place Saturn admired, there was a fountain of water of life  
that fountain the gave life to the world  
its surrounding was fully covered with rose garden  
in front of it was a beautiful green sea  
above it the face of the cloudy sky  
the fish swam there like the moon  
the state seek shelter in the ruler's palace ....  
The world stamped the prosperity on this place in the name of Kaykubad<sup>218</sup>

They created the ideal setting to plan the future conquest, or to read books reminding of past rulers, and giving advice about religion, administrative issues, happiness, and pleasure. The verses of Ibn Bibi moreover present the daily routine of the Sultan in Keykubadiye.

In the morning hours, sultan went out "like the moon from the curtain of clouds" and rides a while in paradisiac landscape accompanied by his men. Afterwards, he listens to the men - probably spies - coming from everywhere to report to Ala al-Din everything they saw and heard. The public audiences in the palace (*bargah*) belong to this routine, which allow the Sultan to bring justice, and order to his realm. Following these public meetings, the Sultan offered everyone who came as guests to the palace lunch. Ibn Bibi indicates that the number of the attendants was big, so that the seated stood up without lingering and others sat down to guarantee everyone has something from the food. Next, the sultan went to another iwan to meet scholars of religion, strategy, and philosophy and to discuss with them everything. After the talks, he enjoyed the dinner in the presence of his scholarly guests. In the evening, the palace (*dargah*) fills with important people who come to the to attend festivities accompanied by music. Ibn Bibi states that the sultan in the absence of his armies spent his day and night like this. Occasionally, he watched

---

<sup>218</sup> Ibid. 308

polo games, and went also hunting.<sup>219</sup>

These descriptions from the daily routine of the Sultan in Keykubadiye shows that the palaces were not only seen as seat of kings and as location for official, diplomatic receptions and gatherings of elites in different events such as dining or entertainment. In this sense, the palace acts as a platform of social, scientific, and artistic exchange of newest ideas and knowledge as well as creation of ideals and ideologies of the authority. The public audiences and dinners show that the palace meant to address all kinds of people from the farmers to the representatives of other lands and kings, and serve both public events as well as private ones. The layout and organization of the spaces must have been created according to the various functions and needs created by these courtly ceremonies and routines.

*Al-Awamir* contains references to many different functions and parts of royal palaces. The palaces housed according to references given by Ibn Bibi amongst others baths(*hamam*), wardrobe for cloths (*jamakhana*) and for textiles (*farrashkhana*), various treasuries (*khazina*), arsenal (*zaradkhana*), stables, jail (*zindankhana*), scullery(*tasthane*)<sup>220</sup>, kitchen (*matbakh*), cellars (*sharabkhana*), private rooms or bedrooms (*visak, otag, saraparda, dahliz, khalwat, shebistan*), and diverse meeting rooms (*bargah, soffai bar*). These correspond to the basic requirements for a royal encampment. The references to tents provided for important guests of the Seljuk palace show the requirements and standards for the traveling elites of the thirteenth century, including the rulers.<sup>221</sup>

<sup>221</sup> Ibn Bibi, *Tıpkıbasım*, 389.

### 3.4 Pleasantness of Kubadabad and sultan's order to build an edifice there

According to the narrative of Ibn Bibi, the great Rum Seljuk sultan 'Ala' al-Din Kaykubād I. (r. 616–35 / 1220–37) discovers a new place on one of his journeys through the Rum Seljuk realm. On the way from Kayseri to the port cities Antalya and Alanya, sultan 'Ala' al-Din Kaykubad I rides with his entourage through various stations and caravanserais. Ibn Bibi states that he and his men stop at every lake and every river and built there their tents.

When the Sultan, [departing] from Qaysariyya on the back of pure-blooded horses, victoriously and joyfully crossed stations and stages in the manner of Solomon and passed by the Capital, he arrived at the charming places of Akrinas(اکریناس).<sup>222</sup>

One of the main topics, or tropes of Ibn Bibi's chapter on Kubadabad—despite the narrative of the events that led to the construction of the palace – is the natural beauty of this place that Ibn Bibi repeatedly compares to paradise. The author points to the heavenly and nearly utopic character of the palace and its environment into the foreground by using verse form.

Then he entered such a heavenly garden so that even the gardener of the Garden of Eden has not been able to grow such a garden.<sup>223</sup>

The regular usage of verses and poems that support and explicate the narration is a common element that the author applies. These additions are almost never explicitly attributed to an author. Hence, they are included into the text so that only people with knowledge of their origins could identify them as references. This manner can be further interpreted as an attempt of the author to recreate a Persian(ate) character to his work. The use of poetry, therefore, is one of the main stylistic elements that Ibn Bibi uses not only to evoke feelings and ideas, but also to add new qualities to the narration.

---

<sup>222</sup> Ibid. 352

<sup>223</sup> Ibid. 418

The beauty of this heavenly nature, and the amazement of the visitors about the view are conveyed through verses. Additionally, comparisons to well-known concepts such as the Garden of Eden belong to the stylistic elements the author uses to create a mental image by his readership. In addition to obvious references and comparisons to heavenly beauty, Ibn Bibi recreates the atmosphere of this area by referring to various the natural qualities. He appeals to the human senses of sight, smell, taste, and hearing.

A mountain base like joyful Paradise (*bihisht*)  
 As if the Heaven (*charkh*) had mixed its soil with ambergris  
 Its ground from greenery in turquoise (*piruza*) color  
 With tulips upon it (like) dots of blood  
 With wild roses, lilies, and narcissi  
 It is like the firmament (*sipihr*) rather than a blooming meadow  
 On every side, a fountain of seeming rosewater  
 You would say it was not water but a luminous tear  
 The air is musk-perfumed, the ground full of beauty  
 There is every kind of boar to hunt  
 It is a green sea [i.e. lake] sweet like milk  
 Full of waves like Chinese silk  
 In it islands count twenty  
 Each one full with village and fruits of fruit bearing (trees)  
 A flowing fountain by the side of the sea [i.e. lake]  
 Such that from seeing it the old become young  
 Like cold ice and musk-scented like wine  
 Its shore ["lip"] is like the cheek on a young man's face<sup>224</sup>

The site is characterized with its various colorful, perfumed flowers, natural abundance, and its rich and tasteful resources of fresh water. The fertility of nature is represented in green and turquoise colors, which is decorated with various flowers in reverse colors, and populated by wild animals such as boars. The idea of paradise is brought to minds once more through the existence water springs at each corner. The water is described as a crystal reflecting the green and the blue tones of the nature. Its taste is compared to rose water, or wine, cold as ice, and sweet as milk.

---

<sup>224</sup> Ibid. 353

The narrative points also to the calming and recreating effect of the nature on the tired army and ruler. In this sense, one might well link the description of contrasting colors of the flowers, especially of tulips whose red color is compared to drops of blood remind the reasons for recreation; battles. Ibn Bibi repeatedly notes that the great Seljuk Sultan needed long period of recreation after military campaigns, battles in particular.<sup>225</sup>

References to the procreative, regenerative, and even the “life prolonging” effect of the complex are further given through metaphors of water. Water of the lake is compared to a cheek of a young man, soft as milk, and the source of life and youth youth which revives the old. The verses included into the prose text further recall the leisure activities made repeatedly at this palace such as hunting, walking, as well as banquets and feast with harmonious music.

Once more, he renewed the instrument of joy  
The world echoed his fortune  
The yearly custom of polo and hunting  
The same royal feast in the tulip garden<sup>226</sup>

The palace fits harmoniously into its environment and even into the cosmos. Even the planets—although jealous of its beauty- seem to complement the architecture of the palace, and to contribute to its harmony with their own instruments.

He drew up [plans] at every location for the foundation of a palace (‘*imarat*) in the iwan of which Venus (zuhra) would desire to sing and on the roof of the iwan of which Saturn (kaywan) would wish to rattle his drum.<sup>227</sup>

The harmony is reflected in the utopic narration of the nature; it resembles and surpasses both productivity and beauty of the Paradise. The idea of the paradise is reflected in the description of cold and clear fresh water. The water elements such as fountains and pools, in addition to the lake next to the palace further recall the image

---

<sup>225</sup> Ibid. 353,395

<sup>226</sup> Ibid. 354

<sup>227</sup> Ibid. 353

of fertility and abundance. The water further mirroring the colors of the sky and nature creates a scene, in which the sky, water, and meadows are hardly to be differentiated from each other. This reminds of the royal iconography showing the ruler enthroned at the center, just at the merging point “between a body of water and a luminous sky”.<sup>228</sup> The same iconography was used in other medieval palaces in Anatolia, recalled by the usage of fountains or pools as in case of the Artuqid Citadel of Diyarbakir.<sup>229</sup> The paradisiac scenery here allows further interpretations linked to the concept of kingship in Islam. The repeated comparison of the building site and palace gardens to the uppermost heaven, where the throne of God and the center of the divine power is suggested, points to the cosmic role of the palace as the center of earthly power and administration.

In addition to these descriptions of the beauty of the nature, these verses also give some geographical hints about the site, which would allow locating the site. Akrinas (اكريناس), according to the verses above, is located on a mountain base, at the shore of a large body of water. The statement about the fresh water springs and a pool created by the drops of their water, suggests that it was probably a fresh water lake. Ibn Bibi further counts around twenty islands on the lake that seem to be big enough to be settled. Nevertheless, Ibn Bibi’s descriptions evoke the idea of an idyllic and untouched paradise like nature. Thus, it can be suggested that Akrinas was the contemporary name of the area or the site of itself, rather than the name of a settlement. Ibn Bibi does not give any further information about this name, nor does he mention it again. If Akrinas was the name of a former settlement that has changed over time, then the author must have used this denotation again, at some point. One possible explanation is that names of places in this area have been changed in time.

---

<sup>228</sup> Tabbaa, *Construction of power and piety in medieval Aleppo* (1997).

<sup>229</sup> Ibid. 94

However, the author clearly states that he built Kubadabad, and not Akrinas. The other, and more convincing explanation is that the name Akrinas was the closest option to give a direction. The author might have given the name of one of the local watchtowers Mindiras, which was at the closes distance to the site and was responsible for controlling the area.

Impressed by this natural beauty, Sultan Kaykubad assigns his contemporary Court Architect and Master of the Royal Hunt (*amīr-i shikār ū mi'mār*) Sa'd al-Din Kopek with the construction of an *imārat* (عمارت), which is a Persian word for a building or structure. The term *imārat* (عمارت) has been translated as 'palace', since the expectations for the appearance were high;<sup>230</sup> the structure should be comparable to the beauty of the Paradise, and surpass legendary palaces in terms of its appeal and decorum.

To Sa'd al-Din Kopek, who at that time was the amir of hunting and building, he gave orders to commence and erect there an edifice which in joyfulness would surpass (?) the harvest of Paradise and which in delight, exaltation and splendor would put Sadir and Khwarnak to shame.<sup>231</sup>

The narrative continues with praises for the creativity and architectural skills of 'Ala' al-Din, who draws a plan of the future palace that he wishes. The text illustrates Sultan's attempt to make projects that compete and even surpass the features of famous monuments of past generations. It indicates or rather proves sultan's orientation on traditional values of Perso-Islamic culture. The palace is related to the pre-Islamic palaces Sadir and Khawarnak from the fifth century, which were built in the Lakhmid capital Hira, today located southeast of Najaf in Iraq. Although these buildings probably stood in ruins in the thirteenth century, their names have endured in the Perso-Islamic culture. Among these two, Khawarnak became particularly

---

<sup>230</sup> Ibn Bibi, *Tıpkıbasım*, 352.

<sup>231</sup> *Ibid.* 353

known for being one of the "30 wonders" of the antique world. Its construction story was further linked to the legendary architect Sinimmar. According to stories, the patron of palace, the Lakhmid king Nu'mān (d. after 418) was shaken by the beauty of the architecture, and skills of the architect, so that he murdered architect Sinimmar instead of rewarding him. Hence, this story was known as "the reward of Sinimmar." There are also versions with the focus on the patron's story (after the death of Sinimmar). These stories describe renouncement and disappearance of the patron that are linked to ideas of guilt, or consequences for vanity of power and wealth. In this sense, the story is a parable indicating that the "grandiose architecture and luxurious decoration claim to build the Paradise on earth, and that building grandiose works is an attempt at competing with the might of God, and is therefore a defiance of Him." <sup>232</sup>

The importance of the chapter on Kubadabad can be directly linked to this small reference to past, namely to the palace of Khwarnak. Its name probably called up the legendary story in the mind of Ibn Bibi's readers, and functioned as a signal indicating the continuation of the historical narrative. Based on the different versions of the story, it can be further suggested that Ibn Bibi tried to indicate the approaching end of either Kubadabad's architect Sad al-Din Kopek, or of its patron 'Ala' al-Din. In addition to this historical reference to legendary palaces, Ibn Bibi uses allegories and personifications of planets to explain the palace that 'Ala' al-Din desired.

He drew up [plans] at every location for the foundation of a palace in the iwan of which Venus (*zuhra*) would desire to sing and on the roof of the iwan of which Saturn (*kaywan*) would wish to rattle his drum.<sup>233</sup>

Ibn Bibi emphasizes that the Sultan has personally drawn the first plans of the palace

---

<sup>232</sup> Alami, Alami, *Art and architecture in the Islamic tradition: Aesthetics, politics and desire in early Islam* (I.B.Tauris, 2013), 153.

<sup>233</sup> Ibn Bibi, *Tıpkıbasım*, 353.

right on site, defining and explaining the use of each part. The author mentions on many occasions Kaykubad's interest in architecture and his involvement in the planning and designing process of such projects. Kaykubad is said to have drawn iwans on each side, which created a harmony that would let the stars sing and dance. However, there is no further information about his involvement in the decision of architectural details such as interior and exterior decoration.

According to these instructions, Kopek builds "a pleasant and life prolonging palace". The architect completes the project even faster than expected. Nevertheless, Ibn Bibi does not give any hints about the exact duration, or phases of the construction works. The result seems to surpass the ideas and expectations of the patron. Architect Kopek creates a complex with beautiful sights, "exhilarating pools", and paradisiac gardens. Ibn Bibi comments on the palace, and says it was more spacious and luxurious than "modest spirits need". He writes that "arched vault" of the palace was decorated with muqarnas, and the walls were latticed and variegated

such that its arched vault with muqarnas would contend with the sphere above it; from the envy of the cheerfulness of the colors of its latticed and variegated walls disturbance and capriciousness would become manifest in the *kashikhana* of the rainbow; from the jealousy of its turquoise and lapis lazuli furnishings the visage of the turquoise-colored sphere and the figure of the representative of roof of the blue palace would become tintured with saffron and safflower.<sup>234</sup>

Ibn Bibi provides a general impression of the complex by naming some significant architectural and decorative elements of the buildings. The architecture of the palace is reduced to elements that are visible from a far; an open courtyard, arched balconies and iwans - one on each side – of the building, as well as a dome. The text particularly draws attention to the colorful decoration of the palace that competed

---

<sup>234</sup> Ibid.

with the colors of the surrounding nature. The walls were decorated with lattices and wall tiles of various colors. Blue tones of the iwans, arches, and dome seem to overweight the general appearance. Ibn Bibi states that the dome and balconies compete with the sky/heaven not only in terms of their color, but also in terms of their height.

The competition with the beauty and fertility of the Paradise, with the bright colors of the nature, or with the heavenly bodies shows that the Ibn Bibi refers to the known and popular measures of his period. He recalls these predetermined analogies and iconographies to explain the uniqueness of Kubadabad palace complex. The unique architecture in unseen form is common trope of the medieval literature both in the east and west, parallel to the paradisiac environment addressed in various ways. Here, Ibn Bibi emphasizes the beauty of the palace and the site around it by including the impressions of the heavenly bodies and of natural phenomena in personified form.<sup>235</sup>

the spectacles of Jupiter (*barjis*) and Venus (*nahid*) would perish from  
mimicking the balconies of that coveted matter...  
If the shining sun sees the exalted palaces  
It would stop turning around the heavens  
At every place, a flowing stream of pure water  
Such that in describing it the tongue of the intellect would become  
ruby/inflamed  
In front of it is a garden like Paradise  
The form of which no sight had seen<sup>236</sup>

The sight of the palace not only impresses, but even surprises the planets. Venus, Jupiter, and the Sun stop their continuous movement and stand still as if they were part of the palace. According to this, Venus and Saturn were standing on top of the palace. The sun spotlights the palace, and stops its movement. The time stops to flow and

---

<sup>235</sup> Ibid.

<sup>236</sup> Ibid.

the north wind would slow down to repose for months and years in the heavenly blue open courtyards; and if the thought of a promenade in its courtyard comes to mind to those with long lives, crossing its courtyards of Paradise-like gardens would not come to an end; the inhabitants of the ascending seven heavenly palaces would at every moment recite the "in yakad" verse;<sup>237</sup>

In other words, the sight of the palace architecture brings the whole sphere, and the time to stop. The idea of time is further related to the concepts of past and memory. Memory is a particularly important feature of the medieval oral culture, which generates experience and knowledge. Moreover, memory of the past is a further element of culture and identity. Thus, memory of the past is also an important topic of Ibn Bibi's narrative, although the references are inconspicuous but branched, and at times hardly recognizable for untrained eyes of the modern reader. For instance, the author compares the movement of the Sultan on the horseback to the great past (pre-Islamic) rulers such as Solomon (or Alexander the Great) or the architecture of the palace to (*riqwat*) Khawarnak and Sadir.

In addition, Ibn Bibi describes the palace as surrounded by heavenly gardens, which invite visitors to walk and spend time. Ibn Bibi points out that visitors enjoy and admire the gardens so much that the inhabitants see themselves forced to pray for protection against the envy of the people and planets. He compares Kubadabad to the seven heavenly palaces. He remarks that "the inhabitants of the ascending seven heavenly palaces", meaning the inhabitants of Kubadabad, continuously recite the "Wa In Yakād (68: 51;52) verse from the Quran, which should protect from evil eyes/envy of the people who would wish to have this paradisiac palace for their own."<sup>238</sup>

Thus, the palace surpassing all past measures becomes the object of jealousy,

---

<sup>237</sup> Ibid.

<sup>238</sup> Ibid. 354

and hence, center of attraction. The chapter ends with the information that the Sultan spent some time there before he then continued his journey to the port cities in the south, and probably also on his way back.

After refining and adorning it, the Sultan ordered the blessed reins in the direction of Antalya and Ala'iyya as was his custom.<sup>239</sup>

Ibn Bibi emphasizes in the text that 'Ala' al-Din was a Sultan who often needed such recreation phases both in winter as in summer time.<sup>240</sup> Although the author does not criticize the sultan directly, he explains these breaks up to one-month length with the youthfulness of the Sultan, who liked to hunt or play polo during the daytime, and to celebrate feasts by night. This must be one of the reasons why the newly built palaces, above all Kubadabad, were mainly known and denoted as hunting and recreation spots for the summer. During the travels through his realm, the Sultan seemed to have resided in city-palaces, and kiosks of different sizes and furnishing.

It seems that the sultans moved from one place to another, generally to the change of the seasons from autumn to winter, or from winter to spring time. Spring and summer, thereby, were considered as the most welcoming seasons providing ideal weather conditions for military campaigns, for audits of local rulers, to show presence and to regulate state affairs. During these seasons, hiding from the heat at the Mediterranean coast, the sultans generally moved towards the central lands that were preferred for their milder climate.

Ibn Bībī seems to have given some hints about the duration of these travels and about the architectural structures at each stop. The text rarely provides the names of the palaces since the author prefers to give directions in form of city names. It seems that the sultans moved from one place to another, generally to the change of the seasons

---

<sup>239</sup> Ibid.

<sup>240</sup> Ibid.

from autumn to winter, or from winter to spring time, which are often introduced with a poetic language and poems. These poems vividly describe the colors, moods, and odors of the nature and justify the change of location.

Spring and summer, thereby, were considered as the most welcoming seasons providing ideal weather conditions for military campaigns, for audits of local rulers, to show presence and to regulate state affairs. During these seasons, hiding from the heat at the Mediterranean coast, the sultans generally moved towards the central lands that were preferred for their milder climate. However, they did not remain at one place for longer than one month, but moved from one city to another, and from one place to another. The palaces patronized by and named after ‘Ala’ al-Din Kaykubad I, for that matter, were always portrayed within the divine beauty of the natural environment recalling the image of paradise. In this regard, the literary depiction of the two particularly named palaces -Kubadabad and Keykubadiye– express through these details a hidden message of the aesthetic appreciation for these structures. In contrast to Kubadabad and Keykubadiye, the winter palaces (*kışlak*) in the coastal areas, especially between Antalya and Alanya, with dry and warm climate are depicted in the text in a less welcoming, and less detailed manner. One reason for the author’s limited interest in these structures was probably their pre-existence, and the fact that they were only restored, but not newly constructed. Furthermore, they did not act as bases or stopovers for the court, and were therefore uninteresting for the narration of political and military history. Accordingly, their role as spaces for physical and mental recovery after military campaigns and battles, as well as for strategic planning, and leisurely activities was surely another reason for their general ignorance within the text.

In any case, these intervals, especially during the warm period, seem not to have been welcomed by the elites. Ibn Bībī emphasizes in the text that ‘Ala’ al-Din was a Sultan who often needed such recreation phases both in winter as in summer time. Although the author does not criticize the sultan directly, he explains these breaks up to one-month length with the youthfulness of the Sultan, who liked to hunt or play polo during the daytime, and to celebrate feasts by night. This must be one of the reasons why the newly built palaces, above all Kubadabad, were mainly known and denoted as hunting and recreation spots for the summer.<sup>241</sup> During the travels through his realm, the Sultan seemed to have resided in so-called City-palaces, and kiosks of different sizes and furnishing. These (walled) facilities probably resembled Umayyad palaces in offering space for the army, royal guards, administrative officers, and other court members that were commonly described in the original text as *havas*, the closest companions.

However, the sultan sometimes also stayed in the areas without royal facilities, and camped in tents as the rest of his entourage. In such cases, huge tents served him and his courtiers as provisory palaces, which fulfilled specific purposes. His personal tent was named *otag*, while further tents were reserved for state affairs, receptions, and administrative meetings of the diwan. References to tents exist also for important visitors in palatial context. Whenever the sultan himself, or high officials visit a foreign palace, they seem to Camp at the specific place near but not within the palace that was shown to them by their hosts. These visits seemed to endure for around a week at least, providing the guests some days to re-create themselves after a long journey, to be entertained and to be hosted before they could see the Sultan himself.

---

<sup>241</sup> Ibid. 293

In some cases, these guests were further invited to stay within the palace for some more days.<sup>242</sup>

Although the caravanserais are argued to have fulfilled palatial purposes, the text provides no mentioning of any royal stopovers in any of them. In other words, royal or courtly travelers preferred to stay in places other than caravanserais, which provided travelers (merchants, ambassadors, etc.) a secure space to lodge and eat where they can store their possessions, loadings, or gifts such as animals and products. Beside this common use, caravanserais fulfilled military or administrative function either as check points and frontiers that marked the borders of a district, or places to welcome official guests. Since caravanserais were built at regular distances from each other, they allowed controlling and keeping track of approaching visitors. Their position on specific routes further facilitated the control of the borders. The repeated reference to the same caravanserai at Obruk illustrates that the routes and hence the spots did not change. Obruk has been the last stop on the way from Aksaray towards the capital Konya. This place has therefore witnessed many important events, especially processions of new sultans on their way to capital to attend the official ritual of enthronement. Izz' al-Din Kayka'us I, as well as 'Ala' al-Din Kaykubad I have been received in Obruk by the high-ranked officials and elites as well as people on their way to their enthronement.<sup>243</sup>

---

<sup>242</sup> There were many examples for such meetings during the reign of 'Ala' al-Din Kaykubad I. Kaykubad should have invited the ruler of Erzincan, Emir 'Ala' al-Din Davudshah to Kayseri to confront him with some accusations of his subjects that were made against him. Davudshah has been welcomed at the border of Kayseri and brought to Keykubadiye, where he has spent three days in a tent at a nearby place that has been provided by the officials. According to Ibn Bibi he has received ritual costumes from the Sultan that gave him the approval to meet the sultan personally. They had a ride around Mashhad and enjoyed together a *majlis*, after which he has been allowed to stay another ten days at the palace. On the eleventh day, the emir has received an *ahidname* that would prove the support of the Sultan for the emir. Ibid. 351-352; A similar reception has happened some time later in Alanya. The ambassador has been entertained for around five days from his arrival onwards with music, dancers, and food at some distance for the castle. After that, he has been upgraded to a lodge for another seven days, until he has received the allowance to attend the *majlis* and to meet the Sultan. Ibid. 146

<sup>243</sup> Ibid. 215;

### 3.5 Conclusion

As mentioned at the beginning, Ibn Bibi provides little information about the palaces –their locations, names, sizes, functions, or the total number of such structures. The author mentions only a handful of the palaces by name. The palaces of Kubadabad and Keykubadiye enjoy here a special prominence. Kubadabad enjoys a chapter of its own, and beside this it is mentioned not more than three times.

Keykubadiye, too, is subject to one chapter, in which the Sultan spends his days in the palace, while his troops are fighting in three different fronts. The closeness of this complex to Kayseri, which seems to be the informal capital at that time, and the longer existence in contrast to the unfinished construction of Kubadabad provides the possibility to learn more about this complex and the life in it.

The prominence and role of these two complexes within the Seljuk dynastic history therefore, should be regarded as an exceptional. It suggests that the author followed a specific agenda in including them into the text. Moreover, a closer look to the descriptions of these palaces proves that they share many elements, which can not only be attributed to their common patron and idea behind their construction, but also to rhetoric and style of Ibn Bibi.

In regard of their different stages of construction and development, commonalities between their descriptions concern palatial environments and landscape. In terms of architecture, Ibn Bibi ascribes in both cases a throne placed in an iwan connected to a larger room or hall. The references to heavenly bodies above the seat suggests either a large dome above it resembling the firmament or large openings towards outside. Pools and fountains are in both cases part of the architecture, as the large gardens around the palatial buildings with paradisiac beauty

and prosperity Ibn Bibi's description of Keykubadiye at his arrival from Sivas recalls the descriptions of Kubadabad.

From there [Sivas] he rode to Kubadiye and by spreading seeds of joy there  
He saw there a city, such, not seen by the sun and moon  
The creek flew from the mountain clear as rose water, pleasant and delicious  
like milk and wine  
It flew to the door of the palace (*bargah*) and spread from there to  
everywhere  
many beautifully built kiosks created hills above the lake,  
the trees were full of fruits in the garden never seen by the gardener of  
paradise  
World ruler stayed at that comforting place some days.<sup>244</sup>

The idea of nature or gardens with qualities such as water springs, lakes, meadows, and trees, in various green and blue tones and a seemingly eternal spring with colorful blooming flowers and various odors promise paradise on earth.

In consideration of the results of the second chapter, it might be well assumed that the type of the eternal spring and paradise on earth were rhetorical elements that were used Ibn Bibi (and most probably by 'Ala' al-Din Kaykubad I) to communicate and emphasize their messages. In case of Ibn Bibi, it has been already indicated that it was his aim to depict the period of 'Ala' al-Din Kaykubad I as the ideal model, for all future rulers of Seljuk Anatolia, whose authority was weakened under the Mongol protectorate. The creation of idyllic images probably should help to transfer this message, to express and raise hope for better futures.

In regard of 'Ala' al-Din Kaykubad I, it is difficult to say whether the images drawn by the author reflected the actual image of the Sultan, or they were part of Ibn Bibi's "fiction". In any case, the itineraries of the Sultan in the peripheries of his realm was part of an administrative system of "itinerant kingship" (*Reisekönigtum*), which was based on the past models (e.g. the Roman Empire during the Tetrarchy, or

---

<sup>244</sup> Ibid.

Umayyad Caliphate).

It has been also practiced in Medieval Europe beginning with the Holy Roman emperor Charlemagne. According to this system, the ruler did not rule from any permanent central residence or capital city, but he travelled with his family and court between the royal palaces (*Königspfalz*) built in different areas of his realm. Thereby the king unified all administrative and representational functions of a government in his person, so that the power was there, where the king was.

The mobility of the court required the establishment of multiple administrative centers and stopovers (or royal residences) for this purpose. The establishment of palace complexes such as Kubadabad and Keykubadiye in rather rural areas were, in this sense, part of this administrative system. Their construction was bound to the financial, political, and military state of the Sultanate. The conquests and victories won against enemies surely delivered financial support to the Seljuk treasury and enabled - in similarity to the military projects patronized by the Sultan. The stability of the state further encouraged and enabled the continuity of these itineraries according to the seasonal changes. The evidence for this is given in the lack of seasonal movements of the ruler and the court both in the period before Ala al-Din's predecessor Izz al-Din and successor Giyath al-Din II.

The visits and stays in Keykubadiye and particularly in Kubadabad seasonal was part of a royal ceremony - or was shown in the text as such- that was established in accordance with the rise of the Seljuk power. The new and strengthened state required new administrative, financial, and infrastructural solutions in facing the expansion of the Seljuk lands, the growth of population under the Mongol treat. The growing size and power further led to the reformulation courtly aims and ideas and recreation of royal image. The analogies drawn between god, sun, lion or eagle and

sultan were helpful tools to visualize this change of mind. The ruler, deputy of God on earth, rose every day in the manner of the sun and enlightened and pleased his subjects. His actions at the court was followed or mirrored by the sun, or vice versa.

His person was accordingly idealized and raised to a divine status, which reflected itself in the architecture of Kubadabad. The image of the sun, mighty, visible but distant was cultivated through new ceremonials. The military power supported through the construction of fortresses made granted him power, journeys allowed him to be ubiquitous, the palaces in the rural landscape and their architecture gave him the possibility to seclude, disappear and reappear.

## CHAPTER 4

### RHETORIC OF PALACE

#### 4.1 Character of Kubadabad: City, caravanserai, or a countryside palace?

Since its rediscovery, Kubadabad has been a mystery which scholars attempt to solve to learn more about the Seljuk history, architecture, and culture in general. The limited information about the Seljuk palaces and court culture provided in the historical narrative of Ibn Bibi have been very insufficient to reconstruct an adequate image of their former glory and role for the Seljuk Sultanate. As a result, many different arguments about Kubadabad's past have been made. Given its exceptional status in regard of the name after the Sultan, the location remote -instead of near – large cities, Kubadabad was argued to be a palace-city, or a caravanserai-like structure for sultan's stopovers.

The analysis of the site based on the information from archaeological surveys showed that a settlement around the palace developed gradually during the construction works, however the size of this settlement –despite its name *Yenişar* – i.e. new city- was probably not dense enough to be an actual city. The evidence for this was particularly given through the central element of an Islamic city – the mosque- and its size. The original inscription of the religious structure indicated that Kubadabad, the center of the province with the same name has only a *maşjid* a small quartier mosque instead of a congregational mosque as found in the main Seljuk cities.

The location of the Kubadabad and the architectural forms evoked further the idea that it was planned as a stopover or a caravanserai instead of a palace that was

only meant to provide essential functions along with beautiful gardens and views of a pavilion.<sup>245</sup> The position near to the mountain passes, and distance to the existing caravanserais supported this argument. Furthermore, researches on Seljuk caravanserai networks illustrate that there was a lack around the palace, which either signalized that Kubadabad had such a function. Osman Kunduracı has found the next known caravanserai, Tol Han near Göynem, Derebucak ca.46 km south from the site. The distance of nearly 46 km, according to Google, would take 9-10 hours to walk. Osman Kunduracı discovered it along with two other Tol Hans in Ortapayam and Eynif in 2001-02. The average distance between caravanserais commonly required a one-day trip for caravans.<sup>246</sup>

Ibn Bibi's narrative indicates that the Rum-Seljuk sultans and their courts have been continuously on the move within their realms and they attended also campaigns and travels to neighbor lands. Thus, despite the centralization of the rule, the Sultan with his entourage was on the move, and remained in the peripheries of the Sultanate. In this governmental system, ruler was considered as the center of the state, while architecture took only a secondary role. Despite their reduced role, palaces and other administrative structures remained still a crucial part of the administrative process. In other words, the sultan ruled not from one center such as the capital city, but the center of power moved from place to place with the person of the sultan. This practice led to the formation of different ephemeral centers. Suburban or rural palaces such as Kubadabad offered the travelling Sultan and his

---

<sup>245</sup> Ibid.

<sup>246</sup> This caravanserai was built by Sultan 'Ala' al-Din Kaykubad I on the route between Konya and Alanya. Kunduracı, "Kubadabad çevresindeki hanlar," (2007).; Kunduracı, "Konya-Alanya güzergâhındaki Selçuklu kervansaraylarının Eşrefoğlu Beyliği'ne sunduğu katkılar," Selçuk Üniversitesi Selçuklu Araştırmaları Dergisi 6 (2018). Kunduracı, "Kubadabad-Alanya Selçuklu kervan yolu güzergâhı üzerine yeni araştırmalar-I" (paper presented at the I. Uluslararası Selçuklu semineri bildirileri, Konya, 2001).

entourage space and supplies to recreate like a caravanserai. However, the palace was never mentioned as a caravanserai, but as an *imarat*.

The term *imarat* generally describes a place to stopover with food to consume and facilities to spend the night. These complexes embodied residential spaces for the Sultan and his family, rooms for meetings and halls for larger events, a harem part, and many utility rooms to store gifts, treasures and jewels, cloths, rugs, and textiles, as well as baths, kitchens, and many more. However, there was no more one single capital city, one main royal residence, or one major palace, but there were many. Accordingly, these *imarets* or palaces fulfilled also basic functions of a palace in a compact form. In other words, these complexes must have embodied also administrative functions. These functions were further indicated in the text of Ibn Bibi through references to such places as *dargah* and/or *bargahs*.

These terms denoted different functions of the palace, and generally stood for the palace. While the term *bargah* (from *bar* meaning audience) described rather private meeting rooms and sometimes the presence of the sultan.<sup>247</sup> *Dargah* in contrast, was used more as a generic term to describe more public addressed parts of the palace, or the palace itself. Peacock and Yıldız indicate that the inner court, or *bargah*, was the space for sultan's household at the palace, “including his harem and entourage of extended family members, servants, favorites (*khawau*), military retainers (*sarwaran-i bargah*), young nobles in attendance (*mulazim*) and household staff of *ghulams*.”<sup>248</sup> Indeed, Ibn Bibi tells us specifically that it was from the *bargah* or inner court that the sultan mounted his horse to tour the city with his commanders.<sup>249</sup> According to these descriptions the *bargah* of Kubadabad was to be

---

<sup>247</sup> Peacock and Yıldız, 14.

<sup>248</sup> Ibid.

<sup>249</sup> Ibn Bibi, Tıpkıbasım, 253.

located in the third court, and maybe also in the second court. The first court however belonged to the *dargah*, where many different functions were housed.

#### 4.2 Tools of rhetoric/ Rhetoric of architecture

The position of the palace on a peninsula evokes the idea that the place was intentionally chosen to ensure security, and to evoke the feeling of a certain grade of seclusion or isolation. The architecture and organization of the complex was used to emphasize the centrality and importance of the ruler. The centrality within the palace buildings was emphasized through the location of the throne that was placed on the one end of the building's axis annexed to the central hall that was the main area of living providing connection to every part of the building. The *bargah* - including the private rooms of the ruler as well as the throne was similarly positioned on one extreme of the enclosed complex, in the greatest possible distance from the main entrance gate of the complex. The walls and courts in between the palace and the entrance underlined the seclusion, even sacredness of it.

Access to the object of curiosity or admiration was mainly given through a sequence of enclosed courtyards arranged from public to private areas. Gates enabled the contact between the secluded palace, the courts, and finally the outside world. They were important spots for security and control, since the gates regulated the access between different parts of the complex. The derivation of the doors and gates from main axes in the complex and within single buildings illustrated the security concern of the courtiers. Similarly, multiplicity of gates guaranteed the restricted access. For example, the throne- or reception hall of the Greet Palace (I-e) was accessible through a gate opening to the front yard of the palace, and then, over the

doors of the vestibule. Their positions hardened the entrance of unwelcomed guests into the hall, and restrained the sight of the interior spaces and of the Sultan.

It can be argued so far that these new palatial structures were a solution for Kaykubad to establish and mark his own legacy as many leaders before him. Secondly, these offered him also an opportunity to deal with the security problems that have been experienced before; ‘Ala’ al-Din himself has witnessed on his own many times, how rulers were forced to give up and surrender to save the lives of the subjects of the sieged city they were in. In this sense, the concept of the suburban palatial complex presented him opportunity of being isolated and independence from the crowded cities, which offered security for both sides for him and the subjects. It further had advantages as platform of propaganda, and as a tool for the development of economy and urban networks. Finally, these places offered space for many leisurely activities during the short periods of non-action (often before and after important military campaigns), and for social gatherings and events, especially for the army.

In the eyes of Ibn Bibi, architecture was also linked to the concerns, policies, and success of the Seljuk Sultanate. The placement of architectural descriptions and references, indicate that the building activity of the Seljuk sultan ‘Ala’ al-Din Kaykubad I followed great victories and conquests. In some cases, the author implies the reason for the conquest was directly related to the productivity and profitability of places, as well as their financial resources. In other cases, the conquests were symbols of military power and success, so that the architectural projects following these meant to emphasize or commemorate this power. The description of palaces in contrast had no political or military messages. On the contrary, they emphasized the beauty of nature and architecture, and described leisure activities, particularly

banquets and feasts. These in contrast to politic and military events were articulated in verse form. They functioned within the narrative as pleasant and entertaining intermissions to make the narrative less monotonous.

In the chapter on Kubadabad - but also in other chapters on sultan's building projects, the sultan appears as the main decision maker in architectural projects; 'Ala' al-Din Kaykubad is the one who sees the advantages and disadvantages of a place, and recognizes the needs for the site. He alone decides about the form and organization of the complex. He is at the same time the initiator, the patron, and designer of the project. The costs and the construction works are under the responsibility of his subjects – i.e. the amirs and beys- which offers them the possibility to proof their dedication and admiration for the Sultan. It is even regarded as a privilege given to those officials. These projects are marks/ imprints of the Sultan which he leaves in the Seljuk landscape which is further demonstrated or emphasized through the renaming of the surroundings after the sultan.

In this sense, his patronage was a form of creating memory, or tool guarantee to be remembered eternally. The ruler as a deputy of God on earth, and hence, the owner of the world overseeing its order. Sultan having more power than all other rulers was supposed to show greater generosity, goodness, presents and his deeds equal to his grade of power and greater than that of all the other rulers.<sup>250</sup> He was considered to have similar responsibilities and roles as God who was considered the architect of the world. The patronage of architecture was a way to show his status. At the same time, Ibn Bibi clearly indicates a relation between victories or successes of Kaykubad and his architectural projects, since the patronage seemed to follow the

---

<sup>250</sup> Nizam al-Mulk states that the tables were representative for the sultan's power, so that his other deeds should reflect his status equally. Nizam al-Mulk, *Siyasetnâme* : (Siyerü'l-mülûk), trans. Bayburtlugil (Istanbul: Dergah Yayınları, 2003), 154. Nizam al-Mulk, *The book of government, or, Rules for kings* : the *Siyasat-nama* or *Siyar al-muluk* of Nizam al-mulk, 122, 123, 128.

victories. Thus, the architectural projects commemorations of these events, and were probably financed through them. In similarity to the role of the architect on earth, there were also spatial comparisons; sultan's throne and palace were compared to the highest sphere of heaven where the God's throne was assumed.<sup>251</sup>

The location of Kubadabad in a suburban area stood in great contrast to the traditional urban palaces. In consideration of the similarities between Ibn Bibi's descriptions of Keykubadiye and Kubadabad, it might be argued that the lake, the natural fresh water springs such as Gürlevi, or creeks and a nature covered in various tones of green and blue colors belong to the characteristic features of these suburban palaces. These elements are relevant and vital for evoking the epic, nearly paradisiac aura of imperial palaces both in architecture and in literature. The concept of paradise was linked to the ideals. Paradise, and with that the garden, represented the opposite of worldly chaos. Paradise was green and fertile with water flowing through it, from all sides.<sup>252</sup>

#### 4.3 Rhetoric of renewal

The nature further is inspiration source for ceremonies and arts. The ceremony is particularly at the center of the court architecture and literature. The narrative of Ibn Bibi acts as a narrative of ceremonials that are reappearing in different episodes and contexts. These ceremonies are bound to the daily schedule of the Sultan, defining in

---

<sup>251</sup> Nizam al-Mulk, The book of government, or, Rules for kings : the Siyasat-nama or Siyar al-muluk of Nizam al-mulk., 2. Hasan b. Ali b. Ishak Tusi (1018-1092), who is better known as Nizamü'l-mülk, the famous vizier of Alparslan ve Malikshah and the builder of the *Nizamiye* madrasas in Baghdad, has precisely described different characteristics / attributes of an ideal (Seljuk) sultan in his *Siyasetname* or *Siyar al-mulk*, that has been a guide for princes propagated over centuries.

<sup>252</sup> In regard of the hot climate and water shortage in main parts of the Islamic lands, it was an image of the ideal. Yet, Anatolia was already green and fruitful.

what periods of time he will present himself to the public, and which image he will create in doing this. In addition, arrival of state guests at the palace official ceremonies for important occasions such as enthronement of a new ruler, marriages of the ruler and military victories give opportunity for entertainments, and feasts. Hunting and polo game are also part of the palatial life both for entertaining and training for warfare. Outside of the palatial context, the sultan, and his entourage of amirs and servants live in encampments using tents for their needs. The text emphasizes the existence of following functional spaces as basic needs. These either in form of architectural spaces or tents is treasury, wardrobe, cellar, hammam, private spaces for living and for meetings and kitchens. These functions are also required for ceremonies such as gift exchange and celebrations. In the light of this, it is possible to argue that the time spend in hammams were also recognized by the Rum Seljuks as ceremonial as in former Umayyad palaces. Thus, all these functions, and more, should be part of the palatial plans.

Architecture and decor are due to their relation to ceremonials similarly inspired by the nature. Nature is on the one hand reflected in the architecture, in the context of planning. The architecture the location and more importantly the position of buildings and rooms must be determined in relation to the course of the sun, the directions of the wind as well as in relation to bodies of water and other topography of the landscape. In terms of Kubadabad, the ceremonial spaces in the complex, the audience halls, thrones, and meeting spaces are directed towards the lake, in different angles and directions. In the small palace that was reserved for audiences and state issues, the audience hall, and the throne (II-e) are placed on an East-West axis, so that the morning sun enters the hall from the windows of the throne iwan. The throne is enlightened from behind during morning hours. The throne in the Great palace (I-

e), in contrast, is positioned together with the reception hall on a north - south (or northwest-southeast) axis, which let the light particularly during the afternoon and evening hours.

The nature further is inspiration source for ceremonies and arts. The ceremony is particularly at the center of the court architecture and literature. The narrative of Ibn Bibi acts as a narrative of ceremonials that are reappearing in different episodes and contexts. These ceremonies are bound to the daily schedule of the Sultan, defining in what periods of time he will present himself to the public, and which image he will create in doing this. In addition, arrival of state guests at the palace official ceremonies for important occasions such as enthronement of a new ruler, marriages of the ruler and military victories give opportunity for entertainments, and feasts. Hunting and polo game are also part of the palatial life both for entertaining and training for warfare. Outside of the palatial context, the sultan, and his entourage of amirs and servants live in encampments using tents for their needs. The text emphasizes the existence of following functional spaces as basic needs. These either in form of architectural spaces or tents is treasury, wardrobe, cellar, hammam, private spaces for living and for meetings and kitchens. These functions are also required for ceremonies such as gift exchange and celebrations. In the light of this, it is possible to argue that the time spend in hammams were also recognized by the Rum Seljuks as ceremonial as in former Umayyad palaces. Thus, all these functions and more must have been part of the palatial plans.

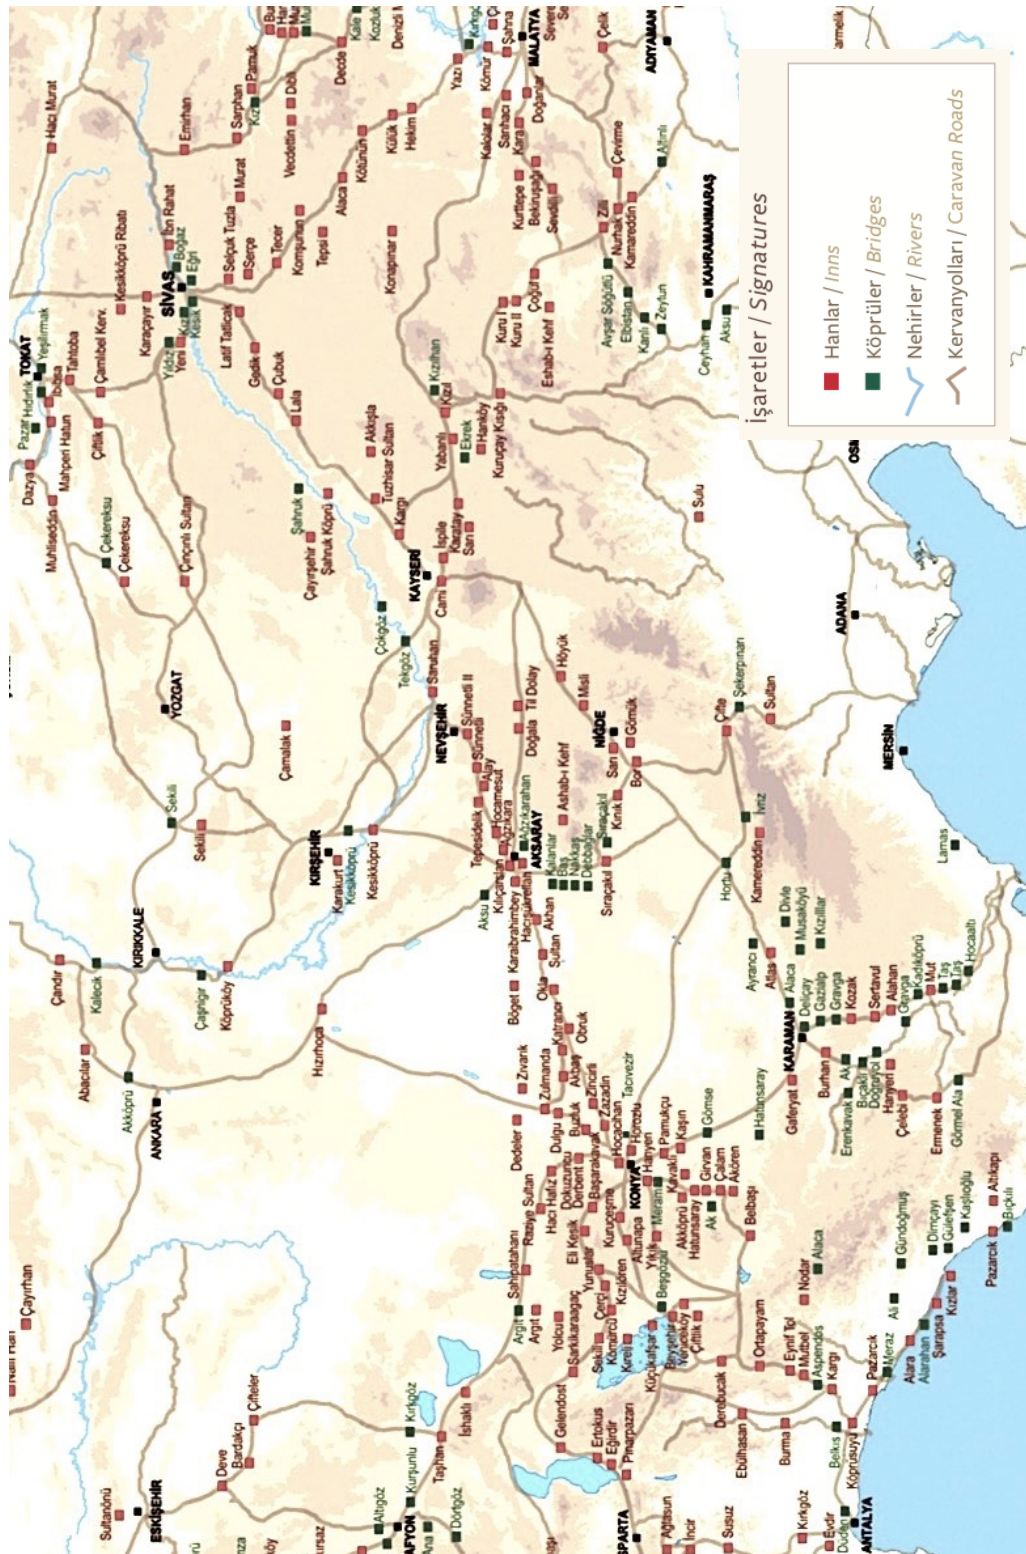

Architecture and decor are due to their relation to ceremonials similarly inspired by the nature. Nature is on the one hand reflected in the architecture, in the context of planning. The architecture the location and more importantly the position

of buildings and rooms were determined in relation to the course of the sun, the directions of the wind as well as in relation to bodies of water and other topography of the landscape. In terms of Kubadabad, the ceremonial spaces in the complex, the audience halls, thrones, and meeting spaces are directed towards the lake, in different angles and directions. In the small palace that was reserved for audiences and state issues, the audience hall, and the throne (II-e) are placed on an East-West axis, so that the morning sun enters the hall from the windows of the throne iwan. The throne is enlightened from behind during morning hours. The throne in the Great palace (I-e), in contrast, is positioned together with the reception hall on a north (-west) south (-east) axis, which let the light particularly during the afternoon and evening hours.

In this sense, the movement direction of the court implied by the gates of each courtyard and by the ceremonial route beginning at the entrance of the second court and ended the third court was reflected in the inner spatial and the ceremonial organization at the palace.

Section from the Çekül Map of Silk Route

## APPENDIX B

### VERSIONS AND TRANSLATIONS OF *AL-AWAMIR*

Unfortunately, the original manuscript of *Seljuknama* has been long lost. However, different copies and versions of the original manuscript are still available. These build the basis for the reconstruction of the original. Currently, two versions of the text are considered as basis for various studies on Rum-Seljuk history. The first is a manuscript located in the Süleymaniye Library in Istanbul (Ayasofya 2985), also known as *mufasssal*, full-length text.<sup>253</sup> It is the earliest and longest version of all and therefore considered as the closest version to the original text. The second is a abridged version (*mukhtaşar*) of the original, which is attributed to an anonymous author.<sup>254</sup> This version is sometimes denoted as *Anonymous Seljuknama*. The main manuscript with the abridged version is held today in Bibliothèque Nationale in Paris (Suppl. Persan 1536).

Although this fifteenth-century copy was obviously a later and reduced version of the original, it has become the main reference work for studies. On the one

---

<sup>253</sup> The original text has been dated to 1281/82. Yıldız names another copy of the full-length text preserved in the Ali Emiri Efendi collection housed in Istanbul, Beyazid Library. This early-twentieth century manuscript contains three volumes denoted as Farsça 819-820-821. Yıldız, "Mongol Rule In Thirteenth-Century Seljuk Anatolia," 433-434 In regard of the different versions see also the catalogue of medieval sources on the database The Islamisation of Anatolia Peacock, "The Islamisation of Anatolia, c. 1100-1500."

<sup>254</sup> In comparison to the original work of Ibn Bibi the abridged version has been produced a little later, around 1284. The production of the shorter version closely after the original has been indicator for historians to argue that the language of the original work was not well accepted by the audience. See: Duda, "Ibn Bibi'nin Selçuk tarihi," *Şarkiyat Mecmuası* 2 (1958).; Küçükhüseyin, *Selbst- und Fremdwahrnehmung im Prozess kultureller Transformation : anatolische Quellen über Muslime, Christen und Türken (13.-15. Jahrhundert)*, ed. Klasse), vol. 825, *Sitzungsberichte (Österreichische Akademie der Wissenschaften. Philosophisch-Historische Klasse)* (Wien: Verlag der Österreichischen Akademie der Wissenschaften, 2011). However, Yıldız has argued that many of the early scholars such as Claude Cahen, and Osman Turan have overlooked the differences between the two versions of the text that left out more than just the superfluous rhetoric. Yıldız, "Mongol Rule In Thirteenth-Century Seljuk Anatolia," 433-436. This abridged version is sometimes referred as the *Anonymous Seljuknama*.

hand, this was due to its early accessibility. On the other hand, it offered the same core information in a much simpler language. Houtsma published a facsimile of this abridged version (*mukhtasar*) already in 1902.<sup>255</sup> M. Nuri Gencosman, who made the earliest translation of the *mukhtasar* into Turkish, stated that the only difference between these manuscripts was the additional literary accessory of the longer Ayasofya manuscript. Gencosman's Turkish translation was published in 1941 with commentaries of Feridun N. Uzluk.<sup>256</sup> A later translation written by in Herbert Duda 1959 - this time in to German<sup>257</sup> - has become the source for further studies, such as Kurt Erdmann's study limited to art historical references in the original text, or the literary analysis of Anatolian sources by Sevket Küçükhüseyin.<sup>258</sup>

In contrast, a facsimile of the Ayasofya manuscript was published as late as in 1956.<sup>259</sup> Only a year after the facsimile Adnan Sadik Erzi and Necati Lugal started to publish the Turkish translations of the *mufasssal*.<sup>260</sup> However, they only managed to publish the first part of the book from the death of Qilich Arslan Arslan II to the enthronement of 'Ala' al-Din Kaykubad I (1957). The first comprehensive translation into Turkish has been published in 1996 by Mürsel Öztürk in two volumes.<sup>261</sup> The same author has recently published the second version of his translation in 2014.<sup>262</sup> There are also Persian editions of the *mufasssal* such as the

---

<sup>255</sup> Ibn Bibi, *Histoire des Seldjoucides d'Asie Mineure d'apres Ibn Bibi: Texte Turc* (E.J. Brill, 1902).

<sup>256</sup> Ibn Bibi, *Anadolu Selçuki devleti tarihi. Ibn Bibi'nin Farsça Muhtasar Selçuknamesinden*, trans. Gençosman (Ankara: Uzluk Basimevi, 1941). According to his argument, the long descriptions and statements were a result of the stylistic manner that was preferred back then, and they had no further use for the reader except their literary value.

<sup>257</sup> Ibn Bibi, *Die Selttschukengeschichte des Ibn Bibi*, ed. Duda, trans. Duda (Kopenhagen: Munksgaard, 1959).

<sup>258</sup> Erdmann, *Ibn Bibi als kunsthistorische Quelle* (Istanbul: Nederlands historisch-archaeologisch Instituut in het Nabije Oosten, 1962).; Küçükhüseyin, 825.

<sup>260</sup> Ibn Bibi, I.

<sup>261</sup> Ibn Bibi, *Selçuk Name*, 1.

<sup>262</sup> Ibn Bibi, 2. *Tercüme*.

version published by Zhale Motaheddin in 2011.<sup>263</sup>

There are further reproductions of this text that have been partly transferred and interpreted in the works of later historians. Thereby, some of them consisted only of small parts that have been included into later books on Turkish history focusing on a larger historical context. For example, *Müsâmeretü'l-Ahbâr* (1323) by Kerimüddin Mahmud-i Aksarayî that covers the history of a longer period starting from the period of the Rashidun caliphate and reaching to the reign of Kayhusrav II. Additionally, two further Seljuknamas preserved from the fifteenth century; the first one named *Tevârih-i Âl-i Selçuk* was written by the Ottoman historian Yazıcızade Ali in Ottoman Turkish includes a chapter that is a *Seljuknama*. The other is a unique manuscript written by an anonymous author preserved in the National Library of France. It has been argued to be an incomplete copy of Yazıcızade Ali's translation.<sup>264</sup>

## APPENDIX D

### IBN BIBI'S CHAPTER ON KUBADABAD (TRANSLATION)

[352]<sup>265</sup>

15 When the Sultan, [departing] from Qaysariyya on the back of high-blooded horses, victoriously and joyfully crossed stations and stages in the manner of Solomon and passed by the Capital, he arrived at the charming places of Akrinas. He saw a place, which, if Ridwan were to reach it, he could not imagine leaving it and, from the abundance of its trees full of fruit, he would carry cuttings for grafting to Paradise.

20 A mountain base like joyful Paradise  
As if Heaven had mixed its soil with ambergris

[353]

1 Its ground from greenery is turquoise in color  
With tulips upon it (like) dots of blood

2 With wild roses, lilies, and narcissi  
It is like the firmament rather than a blooming meadow

3 On every side, a fountain of seeming rosewater  
You would say it was not water but a luminous tear

4 The air is musk-perfumed, the ground full of beauty  
There is every kind of boar to hunt

5 It is a green sea [i.e. lake] sweet like milk  
Full of waves like Chinese silk

6 In it islands count twenty  
Each one full with village and fruits of fruit bearing (trees)

7 A flowing fountain by the side of the sea [i.e. lake]  
Such that from seeing it the old become young

8 Like cold ice and musk-scented like wine  
Its shore ["lip"] is like the cheek on a young man's face

9 To Sa'd al-Din Kopak, who at that time was the amir of hunting and building, he gave orders to commence and erect there an edifice which in joyfulness would surpass (?) the harvest of Paradise and which in delight, exaltation and splendor

---

<sup>265</sup> English translation was made by the author with the kind help of Oya Pancaroğlu. The translation is based on the facsimile version of (Ayasofya 2985), also known as *mufassal* published by Erzi. See Appendix C.

would put Sadir and Khwarnaq to shame. In accordance with his own enlightened mind, the Sultan first transcribed the particulars, and form of that edifice. He drew up [plans] at every location for the foundation of a palace in the iwan of which Venus would desire to sing and on the roof of the iwan of which Saturn would wish to rattle his drum. Sa'd al-Din Kopak [built] beautiful belvederes, exhilarating pools and pleasant and life-prolonging palaces such that its arched vault with muqarnas would contend with the sphere above it; from the envy of the cheerfulness of the colors of its latticed and variegated walls disturbance and capriciousness would become manifest in the *kashikhana* of the rainbow; from the jealousy of its turquoise and lapis lazuli furnishings the visage of the turquoise-colored sphere and the figure of the representative of roof of the blue palace would become tintured with saffron and safflower; the north wind would slow down to repose for months and years in the heavenly blue open courtyards; and if the thought of a promenade in its courtyard comes to mind to those with long lives, crossing its courtyards of Paradise-like gardens would not come to an end; [354] the inhabitants of the ascending seven heavenly palaces would at every moment recite the "in yakad" verse; the spectacles of Jupiter and Venus would perish from mimicking the balconies of that coveted matter...

- 3     If the shining sun sees the exalted palaces  
      It would stop turning around the heavens
- 4     At every place a flowing stream of pure water  
      Such that in describing it the tongue of the intellect would become  
      ruby/inflamed
- 5     In front of it is a garden like Paradise  
      The form of which no sight had seen
- 6     He [Sa'd al-Din Kopak] brought to completion the royal order as requested  
      more splendid than the spirits of the chaste and more spacious than the plains of  
      tranquility in the shortest time possible. After refining and adorning it, the Sultan  
      ordered the blessed reins in the direction of Antalya and Ala'iyya as was his custom.
- 10    Once more he renewed the instrument of joy  
      The world echoed his fortune
- 11    The yearly custom of polo and hunting  
      The same royal feast in the tulip garden
