Dear Feza :

Thank you for your letter & the accompanied paper. The $(SU_6)_q$ group seems to be ~~quite~~ very interesting. It is quite remarkable that

$$\text{decuplet } (10 \times 4) + \text{octet } (8 \times 2) = 56$$

$$\dagger \quad \text{nonet } (9 \times 3) + \text{octet } (8 \times 1) = 35$$

can fit into the irreducible representations of this group in a natural way.

Unfortunately, your paper is far too brief. It left a great deal unanswered. I am looking forward to the second paper by you and Luigi.

In the meantime, I hope you can take a look at the enclosed paper on the stability of the triplet. Please send the corrected version ^{as soon as possible} back to me, by air mail. I hope very much to

receive it by the middle of August, so that it can be processed at CERN & sent out before the end of next month. Many people have asked for copies. If you agree, we will send ^{it} to Nuovo Cimento for publication.

When will you be at CERN? Is CERN taking care of your hotel reservation? If not, please let me know.

Our stay at Varenne was a very pleasant one. Jeannette is taking French lessons at the University of Geneva ^{of Geneva} from 8-11 everyday. Jane is still at the summer camp in Montaux-Cran. Stephen is back with us in Geneva.

Hope to see you all in Geneva. Our very best wishes to all the Ginsseys.
