PHYSICS

Sept 9.

Dear Fera

It was nice to hear your voice yesterday, but I was sorry to hear that your time at Cern has not been altogether comfortable. At some later time, when much dust will have settled, it may be amusing to reflect back on what happened at Cern and why. But not now. You should be glad to be back in Ankara and not have to answer so many questions for a while.

I have also come to the conclusion that it is not the best time for a flying visit, late Sept. This too can wait. Needless to repeat, I look forward very much to my visit in the spring.

I had some very good talks with Luigi yesterday. From this side we have decided upon the following. While I look forward very much to the finished product by

you and Luigi concerning G<sub>6</sub>, Luigi and I will in our own good tempo begin to sort out and prepare our common notes on the calculations which led to the 3-man paper. We may, if all goes well, begin with a draft for ~~each~~ a paper covering these materials. At the same time, we shall simply interrupt completely any such activity, when the developments on the G<sub>6</sub> front demand this. In this way the priority in the order of business has been clearly established.

I have now packed up my last belongings at BNL and return to NY this afternoon. It was quite a summer.

My love to Suha and Youssouf. And all my good wishes for you and the work.

Yours

Brane

copy to Luigi.
